cuts cost of processing

by Philip Hunter
WHILE the market waits for expansion at both ends of the VAX range of minicomputers, DEC has cut the cost of processing power by introducing a twin coupled version of the VAX 11/780.

Called the VAX 11/782, DEC claims it offers 80 per cent more performance for just 30 per cent more money. It is aimed at users which have outgrown the existing VAX range.

There is also a false element in the claim that a reduced service can still be run from the other. But it does not offer true resilience, since the disc drive system, which is the commonest cause of hardware failure, is not duplicated.

Major VAX users seem unexcited by the new system. "It will have little impact on us and our users," says Mark Woolson, technical consultant with Systime.

Woolson sees the VAX 11/782 as a marketing move to enable DEC to delay introduction of genuinely new VAX machines.

"DEC eventually wants VAX machines to cover the broadest possible spectrum and this is creating marketing problems," he explains.

At the bottom end VAX machines are encroaching on the PDP range, which DEC is not yet ready to drop. It has yet to recoup substantial investments in software. At the top end, a VAX significantly bigger and faster than the VAX 780 would compete with the larger DEC 10.

Woolson feels that DEC will wait until both it and users are ready for an expansion of the VAX range on both fronts. In the meantime users are being offered the VAX 782 as a stopgap.

The VAX 11/782 costs £275,000 and an upgrade kit to convert a 780 into a 782 is available for £125,000.

SHOULTS... auditing standard is absolutely necessary.

Standard may outlaw financial packages

by Boris Sedacca
SOFTWARE vendors supplying financial applications without adequate audit controls could soon find themselves out on a limb.

A draft standard published by the Auditing Practices Committee will outlaw many of the financial packages sold for small computers.

APC represents the accountancy bodies entrusted to carry out independent audits on the accounts of companies and organisations, and includes the Chartered Accountants' Association in England and Wales, in Scotland and in Ireland, and the Association of Certified Accountants.

Early this month, APC published a discussion paper called an Exposure Draft, which aims to provide a standardised approach for computer auditing.

Referring to small computers the document states: "There may

be the greater emphasis on substantive testing and analytical review which may be facilitated by certain computer-aided audit techniques; this arises due to the internal controls, because small computers may either be used in small enterprises or may be dispersed throughout large enterprises.

"Many audit software package programs will not operate on small computers, and the smaller volumes processed by small computers may render manual methods more cost effective."

The upshot of this is that smaller audit firms which are being increasingly exposed to computerisation by their clients, will now be faced with an auditing guideline which they may find difficult to implement.

But according to Ken Shoult, computer services manager at Casson Beckman Associates, such a

standard is absolutely necessary. CBA is the consulting arm of Casson Beckman, a medium-sized accountancy firm.

"The Mickey Mouse packages on micros and minicomputers will be forced out of business. Packages will have to provide proper audit trails and controls," Shoult said.

He contends that APC is indirectly setting standards for vendors of software packages as they will have to comply with the standards.

"Many small companies buy packages without consulting their auditors first, and up till now, auditors have not had to know anything about packages. What it means is that companies which have not yet computerised will now have to computerise the right way," he said.

Wang users get DBMS elsewhere

by Maggie McLening
QUEUES of Wang users, left without a database management system for the company's virtual storage machines, are being offered products from independent software houses.

Wang recently acknowledged the shortcomings of its software by turning to companies like The Office Manager and Cincom for help. Cincom is to supply Total database systems, while TOM has announced Speed TM II for file management and application design.

Many users were left high and dry when Wang withdrew its own data management system, ADMS, in September last year very shortly after the launch of its virtual storage VS range.

Plans to replace it with a further in-house database system, which as late as last month Frederick Wang, senior vice-president, insisted was still under development, seem to have been quietly shelved.

As a result, there is a queue of 22 users waiting for the release of Speed TM II, says TOM. It offers file management facilities as well as application design and installation control, according to Naomi Langford-Wood, joint managing director of PME, a software supplier for Wang systems which sells TOM products in the UK.

Speed II is an enhanced version of the Speed TM utility created by TOM for the Wang 2200 series of small business computers, and is installed at over 2,500 sites worldwide.

Wang's equivalent is called

Idea, and is similar to Speed in that both aim to speed up implementation by getting a business function working without standard programming. But there are no plans to adapt Idea for VS hardware.

"VS is a larger, more sophisticated environment, and now there are a number of VS utilities which allow you to do the same things, so there is not the same need," explained Steve Tiggs, Wang (UK)'s 2200 marketing manager.

Speed II is compatible with Wang-supplied programs and utilities, and can be completely integrated with external code in a Wang-supplied environment.

"It's very user-friendly, which is good because you don't have to have quite so many technical people around," commented Langford-Wood, who expects to be offering Speed II to users from April 1.

Wang (UK) has also announced enhancements to the entry-level systems of its Office Informative Systems series of word processing workstations.

The OIS 105-1, offering increased storage, the new DW-20 daisy-wheel printer and a 31K workstation will be available in March, and two further models have been announced for release in July.

SERVOGOR 281 FLAT BED PLOTTER

If you are thinking of using an HP or Tektronix flat bed plotter, then you must look at the Servogor 281!

Exclusively available in the UK from Comma Computers, the Servogor 281 is a low cost, high performance, multi-pen, microprocessor controlled plotter offering hosts of features, functions and options.

The Servogor 281, from Comma Computers, just £3,025

NEWS BRIEF

Mercury goes ahead

THE Mercury alternative telecommunications network is going ahead. Industry Secretary Patrick Jenkin announced in the Commons this week that a licence has been issued to the consortium of Cable & Wireless, Barclays Bank and BP.

Agreement has been reached that Mercury will interconnect with the British Telecom UK public network and will also have access to international circuits, although it will remain a separate international carrier.

Buzby bond delay

AN announcement on the "Buzby bond" that is expected to allow British Telecom to raise £150 million on the open market is still some way off, according to the Department of Industry. This is despite recent optimistic reports.

Civil Service deal

LONG-STANDING negotiations about the introduction of new technology in the Civil Service at last look like reaching agreement. Union negotiators have agreed with Cabinet representatives about a two-year agreement which must be ratified by the House of Commons.

NIXON... 1401 memories.

IBM memories

NOSTALGIA mixed with less than reverent mentions of the IBM 1401 and other ancient beasts were the topic of the evening when IBM managing director Eddie Nixon attended the 25th anniversary dinner of the IBM Users Association last week. Nixon recalled that when Len Griffiths was the first chairman of the CUA, he was writing his first sales brief for the 1401 - which he then produced to the delight of those present.

Star athletes

SOME of the big names from previous Computasters events have already entered this year's competition. The change in the rules allowing firms to put up their own team seems to have been well received, with multiple entries from BTL Systems, Case, and Kalamazoo. Details and application form on page 4.

IBM users gang up over 3081 'shortfall'

by Kevin Pearson
USERS of top of the range computers from IBM and its plug compatible rivals are complaining of poor performance from these large systems.

At least five buyers of IBM's 3081 model D, the first of its H-series, are up in arms over shortfalls in performance. The five are Grundig, Volkswagen, Messerschmidt, Hoechst and BMW. They have formed a 3081 club to pressure IBM into increasing their system throughput.

The problems arise when there is a heavy interactive load on the machine, particularly with a heavy use of Time Sharing Option, TSO, the database system, IMS, and the teleprocessing monitor CICS.

They have been so severe that in some cases users claim the 3081 is only as powerful as the 3033 model. AP, IBM's previous top-end machine.

The main complaints are that the machine does not have sufficient input/output capabilities for the speed of the processor, and that the design of the 3081, as a dyadic or close-coupled dual processor, means that only one of the processors is linked to the input/output system for existing installations.

This effectively means that for an application with a heavy input/output component the machine is working well below its potential.

IBM Germany admits that the 3081D may not come up to expectations in individual cases. Unless the whole computer installation is designed to make use of the processor's performance, with 24 channels and high speed peripherals, then the system's performance will not come up to scratch, it adds. The company has yet to make appropriate peripherals like the 3380 disc drive available.

BURCH... Large systems have very variable performance ranges.

Standard Life Assurance of Edinburgh, one of only four 3081D users in the UK, reports similar experiences to the German companies. "The processor is faster than we had been led to believe," says Douglas Manson, assistant head of systems at Standard Life, "but the system doesn't respond as well as we expected."

UK fifth generation cash in doubt

by Boris Sedacca

THE government is to pull together the UK computer industry to a conference in the summer to attempt to agree Britain's response to Japan's fifth generation computer project.

The conference will follow an earlier one at the end of January when the Department of Industry invited the Science and Engineering Research Council to consider plans for a collaborative UK effort for fifth generation computers.

But applications for the DoI this week described as "incorrect" reports that the government had plans to spend £250 million on the development of these machines.

"We held a conference at the end of January so that those people who went to Japan with Reay Atkinson (then head of the DoI's information technology division) late last year could report back to the industry with their impressions," the spokesman said.

"No decisions have been made and the figure of £250 million was put on the plan as a guess/estimate, and would not all be coming from government but from industry as well if there was a decision to go ahead," he added.

A senior industry delegate at the January conference, which was attended by about 60 people, said that it was essentially a meeting of university academics addressing industry and government to obtain research funds.

"I do not think they have thought through whether we should provide a value-added element along the lines of the ICL Fujitsu deal or compete directly with the Japanese," he said.

"Academics are running for head-on competition, but the Japanese are better at working in large research teams and universities do not figure highly in the Japanese scheme of things," he added.

Few civil servants within the DoI appear to be in favour of government support on such a large scale.

COMMODORE PET
Quite simply, Britain's biggest selling microcomputer

Commodore's confusing claim.

Top micro firms rapped by advt standards authority

by Robert Parry
ADVERTISING of microcomputers has attracted a rash of complaints to the Advertising Standards Authority from unhappy buyers.

The Authority's summary of complaints dealt with during December shows three of the top-selling microcomputer companies - Commodore, Sinclair and Tandy - had complaints against them.

As well as the recurrent theme of equipment not being available as advertised because of production delays - in December it was the Sinclair ZX printer, the previous month the Commodore Vic-20 - there were claims that adverts were misleading about price, popularity and performance.

Tandy was in trouble because prices for the TRS-80 Model III were shown as £499 or £599, depending on which Sunday colour supplement you read. Timing of the price rise did not fit the two printing schedules equally well.

The ASA upheld the complaint, and asked that future advertisements be amended.

EVOLUTION OR OBSOLESCENCE?

The concept that the dodo was not able to grasp was planning for tomorrow. With computer technology advancing so rapidly can you be sure your system of today are not heading for extinction? At Storage Technology we are committed to manufacturing products that move with the times. Which is why we have become world leaders in supply and maintenance of a full range of plug compatible peripherals. We design and build our own high speed, high density storage systems, so that we provide what you need, when you need it. Today we are planning unique new data systems, printers, communications processors, and our own CPUs. And we provide a service back-up that other companies will strive to match in the future.

CENTRONICS Diablo 100/110/120/130/140/150/160/170/180/190/200/210/220/230/240/250/260/270/280/290/300/310/320/330/340/350/360/370/380/390/400/410/420/430/440/450/460/470/480/490/500/510/520/530/540/550/560/570/580/590/600/610/620/630/640/650/660/670/680/690/700/710/720/730/740/750/760/770/780/790/800/810/820/830/840/850/860/870/880/890/900/910/920/930/940/950/960/970/980/990/1000/1010/1020/1030/1040/1050/1060/1070/1080/1090/1100/1110/1120/1130/1140/1150/1160/1170/1180/1190/1200/1210/1220/1230/1240/1250/1260/1270/1280/1290/1300/1310/1320/1330/1340/1350/1360/1370/1380/1390/1400/1410/1420/1430/1440/1450/1460/1470/1480/1490/1500/1510/1520/1530/1540/1550/1560/1570/1580/1590/1600/1610/1620/1630/1640/1650/1660/1670/1680/1690/1700/1710/1720/1730/1740/1750/1760/1770/1780/1790/1800/1810/1820/1830/1840/1850/1860/1870/1880/1890/1900/1910/1920/1930/1940/1950/1960/1970/1980/1990/2000/2010/2020/2030/2040/2050/2060/2070/2080/2090/2100/2110/2120/2130/2140/2150/2160/2170/2180/2190/2200/2210/2220/2230/2240/2250/2260/2270/2280/2290/2300/2310/2320/2330/2340/2350/2360/2370/2380/2390/2400/2410/2420/2430/2440/2450/2460/2470/2480/2490/2500/2510/2520/2530/2540/2550/2560/2570/2580/2590/2600/2610/2620/2630/2640/2650/2660/2670/2680/2690/2700/2710/2720/2730/2740/2750/2760/2770/2780/2790/2800/2810/2820/2830/2840/2850/2860/2870/2880/2890/2900/2910/2920/2930/2940/2950/2960/2970/2980/2990/3000/3010/3020/3030/3040/3050/3060/3070/3080/3090/3100/3110/3120/3130/3140/3150/3160/3170/3180/3190/3200/3210/3220/3230/3240/3250/3260/3270/3280/3290/3300/3310/3320/3330/3340/3350/3360/3370/3380/3390/3400/3410/3420/3430/3440/3450/3460/3470/3480/3490/3500/3510/3520/3530/3540/3550/3560/3570/3580/3590/3600/3610/3620/3630/3640/3650/3660/3670/3680/3690/3700/3710/3720/3730/3740/3750/3760/3770/3780/3790/3800/3810/3820/3830/3840/3850/3860/3870/3880/3890/3900/3910/3920/3930/3940/3950/3960/3970/3980/3990/4000/4010/4020/4030/4040/4050/4060/4070/4080/4090/4100/4110/4120/4130/4140/4150/4160/4170/4180/4190/4200/4210/4220/4230/4240/4250/4260/4270/4280/4290/4300/4310/4320/4330/4340/4350/4360/4370/4380/4390/4400/4410/4420/4430/4440/4450/4460/4470/4480/4490/4500/4510/4520/4530/4540/4550/4560/4570/4580/4590/4600/4610/4620/4630/4640/4650/4660/4670/4680/4690/4700/4710/4720/4730/4740/4750/4760/4770/4780/4790/4800/4810/4820/4830/4840/4850/4860/4870/4880/4890/4900/4910/4920/4930/4940/4950/4960/4970/4980/4990/5000/5010/5020/5030/5040/5050/5060/5070/5080/5090/5100/5110/5120/5130/5140/5150/5160/5170/5180/5190/5200/5210/5220/5230/5240/5250/5260/5270/5280/5290/5300/5310/5320/5330/5340/5350/5360/5370/5380/5390/5400/5410/5420/5430/5440/5450/5460/5470/5480/5490/5500/5510/5520/5530/5540/5550/5560/5570/5580/5590/5600/5610/5620/5630/5640/5650/5660/5670/5680/5690/5700/5710/5720/5730/5740/5750/5760/5770/5780/5790/5800/5810/5820/5830/5840/5850/5860/5870/5880/5890/5900/5910/5920/5930/5940/5950/5960/5970/5980/5990/6000/6010/6020/6030/6040/6050/6060/6070/6080/6090/6100/6110/6120/6130/6140/6150/6160/6170/6180/6190/6200/6210/6220/6230/6240/6250/6260/6270/6280/6290/6300/6310/6320/6330/6340/6350/6360/6370/6380/6390/6400/6410/6420/6430/6440/6450/6460/6470/6480/6490/6500/6510/6520/6530/6540/6550/6560/6570/6580/6590/6600/6610/6620/6630/6640/6650/6660/6670/6680/6690/6700/6710/6720/6730/6740/6750/6760/6770/6780/6790/6800/6810/6820/6830/6840/6850/6860/6870/6880/6890/6900/6910/6920/6930/6940/6950/6960/6970/6980/6990/7000/7010/7020/7030/7040/7050/7060/7070/7080/7090/7100/7110/7120/7130/7140/7150/7160/7170/7180/7190/7200/7210/7220/7230/7240/7250/7260/7270/7280/7290/7300/7310/7320/7330/7340/7350/7360/7370/7380/7390/7400/7410/7420/7430/7440/7450/7460/7470/7480/7490/7500/7510/7520/7530/7540/7550/7560/7570/7580/7590/7600/7610/7620/7630/7640/7650/7660/7670/7680/7690/7700/7710/7720/7730/7740/7750/7760/7770/7780/7790/7800/7810/7820/7830/7840/7850/7860/7870/7880/7890/7900/7910/7920/7930/7940/7950/7960/7970/7980/7990/8000/8010/8020/8030/8040/8050/8060/8070/8080/8090/8100/8110/8120/8130/8140/8150/8160/8170/8180/8190/8200/8210/8220/8230/8240/8250/8260/8270/8280/8290/8300/8310/8320/8330/8340/8350/8360/8370/8380/8390/8400/8410/8420/8430/8440/8450/8460/8470/8480/8490/8500/8510/8520/8530/8540/8550/8560/8570/8580/8590/8600/8610/8620/8630/8640/8650/8660/8670/8680/8690/8700/8710/8720/8730/8740/8750/8760/8770/8780/8790/8800/8810/8820/8830/8840/8850/8860/8870/8880/8890/8900/8910/8920/8930/8940/8950/8960/8970/8980/8990/9000/9010/9020/9030/9040/9050/9060/9070/9080/9090/9100/9110/9120/9130/9140/9150/9160/9170/9180/9190/9200/9210/9220/9230/9240/9250/9260/9270/9280/9290/9300/9310/9320/9330/9340/9350/9360/9370/9380/9390/9400/9410/9420/9430/9440/9450/9460/9470/9480/9490/9500/9510/9520/9530/9540/9550/9560/9570/9580/9590/9600/9610/9620/9630/9640/9650/9660/9670/9680/9690/9700/9710/9720/9730/9740/9750/9760/9770/9780/9790/9800/9810/9820/9830/9840/9850/9860/9870/9880/9890/9900/9910/9920/9930/9940/9950/9960/9970/9980/9990/10000/10010/10020/10030/10040/10050/10060/1007

'Speed of mini, price of micro'

by Robert Parry
MULTI-USER systems with the speed of a mini but the price per user of a micro is the promise held out by Multicomputer with its M200 systems.

Based on US hardware from Molecular Logic, M200 gives each user a separate 280 CPU with 64K RAM and access to shared disc files and peripherals, and a remote terminal.

By putting all the process boards in one central unit, connected by a high-speed parallel internal bus, Multicomputer claims to provide "speed where it counts" — cheaper than a minicomputer and faster than a local area network linking individual microcomputers.

Up to 255 users can share hard disc storage which can be expanded to 600 Mbytes. The system runs under a CPM-based operating system, nSTAR. It will run standard CPM application programs, but is enhanced to give multi-user programming and ease better data security.

Links to mainframes are not currently possible, but managing director Arthur Kennedy thought that the capability would be available in three to four months.

Brentford-based Multicomputer will sell only direct to users in partnership with people proficient in particular application software. This could involve supplying hardware and operating system software to system builders or

KENNEDY... Links to mainframes in 3-4 months.

supplying turnkey systems to end users with application software written by experts.

Multicomputer's first link is with a group general practice in the Deddington Health Centre, Oxford. Software aimed at primary health care has been written by one of the doctors, Peter Fell, a neighbour of Kennedy.

No customers are lined up for such systems yet, but Multicomputer hopes for a share of the large potential market. Benefits of the

system to large group practices, which can stretch to 30 doctors and 75,000 patients according to Kennedy, include enabling the doctors to practise preventive medicine as well as curative. It would be possible to search for particular drug combinations or sets of symptoms, impossible with manual systems.

Kennedy added that if the GP systems went well, Multicomputer would think seriously of developing hospital medical systems.

Call for £175,000 to develop DP training

by David Craver
THE voluntary computer services industry training board, Cosit, is seeking some £175,000 from the Manpower Services Commission this year to develop industry training of DP staff. That figure is less than one per cent of what the UK computer industry is estimated to spend on training annually.

Cosit, formed last October, hopes to provide a more flexible approach to training, and so turn the MSC away from the typical two-year TOPS-oriented programmes. Its role will be as a kind of broker for industry-run training courses, tapping the strengths of the major computer companies which have set up their own successful training schemes.

The MSC is expected to look favourably on the board's "supplication for continuing assistance".

The progress of Cosit will be under the eye of the Engineering Industry Training Board, which may find its future as the traditional centre of computer industry training brought into question.

When Tebbitt agreed to be the keynote speaker at a Cosit seminar on March 10 which, Ewan says, will put the message to industry executives that "unless you are prepared to train you are going to get caught."

as Cosit training executive Gordon Ewan puts it, especially as Employment Secretary Norman Tebbitt has made clear his preference for voluntary arrangements.

Tebbit has agreed to be the keynote speaker at a Cosit seminar on March 10 which, Ewan says, will put the message to industry executives that "unless you are prepared to train you are going to get caught."

The MSC, which has been allocated £1 billion under the government's New Training Initiative, will decide by the end of next month where training funds will go. While Cosit has put a five-year programme to the MSC for consideration, Ewan is of the opinion that the MSC will opt for short-term funding.

The recent appointment of David Young as chairman of the MSC to replace Sir Richard O'Brien encourages that view, and Ewan suggests the MSC is starting from scratch with the new appointment.

Ewan hopes Cosit will become the No 1 trainer in the computer industry, which could eventually expand its current mandate which is now solely in computer services. He says his job is to convince companies to take people on and train them from apprentice level, as well as to provide some standardisation of training.

Apprenticeships, Ewan says, are out of fashion, and this was one of the reasons for setting up industry training boards in the Sixties. But some sort of formal "traineeship" is needed, he asserts.

EWAN... "Unless you are prepared to train you are going to get caught."

SALES BRIEF Solartron system for power station

THE Solartron Industrial Systems division of Schlumberger has secured a £400,000 contract from the Central Electricity Generating Board for a plant supervision system at Eggborough power station, Humberside.

The system will be based on 512 Kbyte Digital Equipment PDP-11/24s running software developed on a DEC LSI-11/23 at the CEGB, using its own proprietary language Cullis. Completion is due by the end of 1984.

Police links

THE Home Office has ordered a number of computer-based communications systems from Burndep Cyfa Systems of Llangwladlyr, Gwent. They include a Consort II network control system for the police radio and telephone links, a Mini-Consort II divisional work control system and a radio location system for nearly 30 vehicles.

Healthy interest

ORDERS from health authorities for Stage One Computer Ltd transactional database programme Administrator now total £20,000. The company has also signed distribution agreements in the US with Professional Software, which markets the Wordpro word processing package, and with Index of Johannesburg. The US market is expected to take 6,000 packages a year.

£100,000 order

BELFAST estate agent M. Morton and Company has landed a word processing, data processing and information retrieval system based on a Wang 2200 VME. Supplied by Wang's Northern Ireland distributor Logicon, the system has six VDUs and, with application development work, cost over £100,000.

Voice links

CENTRE-file, the bureau subsidiary of NatWest Bank, has installed a voice response system from Menzies Communications Systems, taking advantage of MCS' scheme for bureau customers which links payments to usage. The system is being used by X-Shoes to collect data from 325 shoe shops.

Consortium

THE Trowbridge-based Consortium for Purchasing and Distribution has ordered a £50,000 Realtime for Purchasing and Distribution system to replace its existing order processing system. It will link data input equipment to a frame at Wiltshire County Council offices.

Society system

SCARBOROUGH Building Society is to install an in-house system to install an in-house system. Based on software from Cardiff-based Target Computer Services, it runs on a Univac System 80. The system is written in RPG II and it will support input and inquiry from five workstations in two of the society's offices.

Holiday micro

BIRMINGHAM-based villa holiday operator European Holidays has installed a Micro Space accounting and reservation system from Micro Scope. The system is based on a Telem 1000 microcomputer with two terminals and it will help to handle the expected 10% increase on last year's 8,000 bookings.

ADP, Aregon team up on viewdata range

by Donald Kenoett

COMPANIES wanting to extend their computing facilities to a much wider range of users could benefit from a new range of viewdata services being marketed through ADP Network Services and Aregon International.

The services will be marketed under the name ADP/Aregon, initially in the UK and in other countries later this year. The range includes network and bureau facilities, turnkey systems based on Digital Equipment PDP-11/23 and PDP-11/44 minis, viewdata software for existing installations, and gateways to give access to any other computer or network.

The functions supported include high-resolution graphics for diagrams and digitised photographs. These are accessed through the £1,000 AGP audio graphics processor, which was developed by Aregon with the Open University as the Cyclops terminal.

Mailbox facilities and access to

data processing services are also supported, as well as the standard information retrieval and data collection functions, using standard viewdata terminals.

Aregon International's managing director Anthony Chondor said the viewdata services were expected to generate £500,000 worth of business in the first year. "We are now showing people they can save money with a videotex (viewdata) system."

Chondor added, "It seemed to us that the next stage forward would happen by allowing them to access bureau services and rent their own on-site services on an annual basis."

ADP managing director Brian Titherthorpe said the ADP/Aregon services combined hardware, software, maintenance and consultancy with access to both national and international communications networks.

ADP is the European subsidiary of Automatic Data Processing in the US. Its network provides local-

Re-launch by private viewdata pioneer

by Donald Kenoett

ONE of the first companies to put a private viewdata system on the market in the early days of Prestel has re-packaged and re-launched its system.

Twyford-based software consultancy and systems house D. M. England has sold only 15 of its editing terminals and one copy of the viewdata system software package it developed in 1978 to run on the Digital Equipment PDP-11 range. But it has continued to refine the system, now called Miracle Viewdata, and is gearing up to meet what it sees as a renewed interest in viewdata, particularly in private ventures.

Marketing manager Alan Howard said: "We don't see ourselves as being in large quantity terminal manufacture, but we can be quite strong in editing systems because we start at a modest level."

He thinks the system will account for no more than 10% of this year's expected £1 million turnover.

The company has set up batch production of the system at its assembly plant near Taunton and has one salesman out of a staff of 35 promoting it full-time. It makes its own editing terminals using an Intel 8085-based control unit and keyboard of its own design, with a modified Ferguson Movie Star colour television as a display.

For the central database, it builds multi-vendor Winchester

Miracle Viewdata.

disc-based systems around the Digital Equipment LSI-11/23, which it buys in as a printed circuit board, or runs its software on to standard Digital Equipment systems to handle larger capacities. The LSI-11/23-based version would be expected to handle up to 48 terminals at once, probably six of them being editing terminals.

Enhancements to the editing software on the new version include commands which enable blocks of text and graphics to be moved around the screen and colours to be changed in blocks instead of row-by-row. A single key-depression displays all the control characters that are in use.

The price of the editing terminal is £950. Software for the central system costs £3,900 including a gateway facility for linking to other computers. The editing and bulk update modules are £1,990 and £990 extra respectively.

Mid-range Series 1

by Kevin Pearson
A MID-RANGE version of its Series 1 minicomputer has been launched by IBM.

The new model, designated the 4954, fits between the existing Series 1 processors and is priced at £5,343 for the standard 64-Kbyte version.

Maximum memory is 256 Kbytes, which places the machine mid-way between the 128-Kbyte maximum of the smaller 4952 and the 512-Kbyte memory of the top-of-the-range 4955.

The new machine is available with the same eight software address spaces as the 4955 for multi-programming.

Talking terminal

by Kevin Pearson
BLIND or partially sighted computer users have been given a boost by the launch of IBM's audio option for its 3278 terminal.

The Audio Output Feature produces electronically synthesised speech from the information which is displayed on the screen.

The talking version of the 3278 has an additional 16-key keypad and three extra controls; otherwise it looks like a normal 3278 and can be used as such by normally sighted people.

At £3,300 the unit is three times the price of a standard 3278, and the audio option is not available as an add-on feature for existing terminals. There are thought to be about 200 potential users in the UK.

Wizard system for finance models

by Maggie McLening
HEDGING its bets in the financial modelling market, time sharing bureau Comshare has launched a product for mainframe users. Called Wizard, the new system is to be available as a bureau facility, in contrast to Fastplan, a modelling system which Comshare recently launched for clients to run on their own in-house micros.

"We decided to separate and go up and down market," explained Nigel Podesse, financial products marketing manager.

Wizard is designed for multi-dimensional business modelling and can handle over 2,000 variables, which is equivalent to 2,500 master lines in Planmaster or over 5,000 rows in FCS, two other widely used financial modelling packages, according to Comshare.

Podesse describes Wizard as an "intelligent database, a hypercube for multidimensional modelling." "The user can clip in anywhere and state formulae for calculations, and the system spreads them top-down globally," Podesse added.

A microcomputer version will be available at the end of May, but will not be sold as a standalone system through dealers. "It will be sold more in the context of the Wizard system, for people who also have the mainframe version, and would therefore not be competitive in a simplistic market," explained Glyo Reed, strategic planning director of Comshare.

Comshare expects sales of £1 million from Wizard in the UK in the first year.

Entries roll in for DP Olympics

ENTRIES for this year's Computastars are coming in thick and fast. Last season's champions, BL, are fielding five teams and Case, who took the individual gold medal in the first two years of the competition, are back with a vengeance — four teams will compete this year.

The defeated finalists in the 1981 Computastar, the Worthing Rams (otherwise known as the Inland Revenue), are back, as are last year's European winners, Kalamita, with three teams.

Legal and General has entered again, but without last year's ladies champion, Bridget Cuthill who is leaving to get married. Whether this will affect L&G's "invincibility" remains to be seen.

Entries can be in any one of four categories: Men's or women's teams in the main competition and Computastar, the Small Units section, which is restricted to companies employing fewer than 25 staff in a 25-mile radius of the location of the team's entries, and Veterans, which is limited to members who are 35 years old or over on February 1, 1982.

Full details of the rules and regulations can be found in the February 1-11 issue of Computer Weekly, and all entries must be in by March 19.

COMPUTASTARS ENTRY FORM

We have read and accept the conditions of entry for the Computastars/Computastar 1982 and would like to enter

Main competition Men's teams Women's teams
Small units Men's teams Women's teams
Veterans Men's teams Women's teams
Computastar Men's teams Women's teams

Name of team(s) Women's teams

Company

Address

Name of contact

Telephone

Signature of DP manager or equivalent authority Extension

Position held

We would like to compete in the following region:

NORTH (BARNSELEY) MIDLANDS (BIRMINGHAM) SOUTH (CRAWLEY)

LONDON (ENFIELD)

please circle appropriate region

Enclosed is £..... to cover the entry fees for the team(s). Cheques should be made payable to Computastars Ltd.

In all matters relating to the rules or conditions of entry, the decision of the organisers is final.

Please send entry form and fees to Computastars, 117b High Street, Geydon CR0 1QG.

Telephone 01-688 6690

Dates and venues: Crawley, Saturday, May 15; Barnfield, Sunday, May 23; Barnsley, Sunday, June 13.

Birmingham, Saturday, June 26; UK Finals: Birmingham, Saturday, July 24.

If you have a query on Computastars please don't contact us at Computer Weekly — get in touch with the organisers at 117b High Street, Geydon CR0 1QG. Tel: 01-688 6690.

3081 users gang up

● From front page

pond to terminals as quickly as we expected."

Pat Sullivan, vice-president of US consultants ACT, and an expert on IBM's big systems, confirmed Standard Life's experience. He said that tests in the US had shown that the 3081 processor was faster than IBM has claimed, but that where the input/output load is high there could be performance shortfalls.

IBM is not alone with the problems. They have also affected National Advanced Systems' Japanese-built AS9000, which has a similar power rating to the 3081D.

"Large processors today have very variable performance ranges," says Brian Burch, director of large systems at NAS, "and it is not possible to predict where in that particular range a particular workload will drop."

"You cannot construct realistic benchmarks for the production environment of a large scale system because you cannot simulate 1,000 terminals."

"The variable power rating is due to a bottleneck in the system's architecture," added Burch. He believes it will be cured when Extended Architecture MVS/XA becomes available.

CHANDOR... People can save money with viewdata.

call access in 30 locations in the UK out of a total of 100 worldwide. The viewdata package will be marketed in a number of other countries, probably including Holland, West Germany and Italy this year.

One US client is evaluating the viewdata software for a specific application, although ADP has yet to decide to market it actively there. France is expected to be a big market for private viewdata, but ADP

may tackle it with a local solution if it finds there is too much hostility to a British product.

Using the ADP/Aregon service would cost £3,000 a year for 500 pages and 50 hours a month access time on the bureau machine, or from £20,000 a year for a system on the customer's site. The latter would be based on a PDP-11/23 with eight access ports and Winchester disc storage with tape streamer back-up.

The AGP high-resolution graphics terminal is expected to appeal to a very small proportion of users, but is felt to be an essential answer to competition from Canadian-built viewdata systems which feature more sophisticated graphics than the current version of Prestel.

The terminals are currently being made for Aregon to batches of 25 and Chondor said the price would drop from £1,000 to £700 each for anyone who ordered 50.

WE ADMIT OUR 4500 IS DISTINCTLY DIFFERENT.

Our 4500 Tapé subsystem doesn't have an extra leg — but it does have an extra density.

With the option of triple density it combines big system features with the size advantages of smaller devices.

Important cost-effective features include the brilliant space saving idea of a built-in control unit, plus the ability to operate in an office environment.

The choice of two available speeds to match the capabilities of your processor and drives allows full flexibility at the lowest price.

Our Field Service department can adapt the 4500 to give you the

exact subsystem you need — when you need it.

This all adds up to an advanced product for tomorrow that we are producing today.

If you are looking for ways to increase the performance of your processor take a close look at STC. We offer peripherals to enable your system to stand the test of time.

For more facts and information on tomorrow's products, today, call Roy Dodds, UK Sales Manager on Esher (0372) 87041.

STC
World leaders in main-frame computer peripherals.

DEC sales shift means more support for small user

by David Craver
WITH Digital Equipment's authorised distributor programme now firmly in place, the first dividends should go to DEC's smaller customers, who can expect better service and support.

The official announcement of the five UK authorised terminal distributors Rapid Recall, Bytech, Zygal, MBS Rentals, and Abacus - was made last week, although their names had been widely known since the beginning of the year.

Thus the final strokes have been put to DEC's strategy to shift most of the low end of its business to distributors. And that strategy is likely to be emulated increasingly by the other major computer

manufacturers, who are finding it more difficult to provide adequate levels of support to customers as the cost of hardware continues to decline.

DEC had been plagued by the collapse of some of its leading OEM systems houses, and there has also been some disarray in the terminal market. The authorised distributor programme is designed to ensure that DEC has more control, while at the same time providing better pre- and post-sale support for users at the local level.

Eight commercial OEMs have been named since the scheme was announced two years ago - ACT, Alveronic, Applied Computer Systems, Arbat, CHA Group, Hoskys, Management Control

SEAL OF APPROVAL... Representatives from DEC's new terminal distributors Zygal, Bytech, MBS Rentals, Systems, and Online Computing of Dublin.

Bill Passmore, UK marketing manager, said that the number of commercial OEMs would increase, but in ones and twos rather than half a dozen at a time. He would like some of the big names, like

CAP, to join the authorised distributor programme, but their reputation is such that they can continue to market DEC kit without DEC's imprimatur.

The number of terminal distributors will probably stay fixed at least until their effectiveness can be assessed, Passmore adds.

The DEC sales office has changed significantly since the early 1970s, Passmore states, and now concentrates on big systems or high-volume orders to companies like BL, which might take 200 terminals at a time.

Executive terminal plugs into phone system

A PORTABLE terminal for the "executive on the move", which allows remote access to computers for electronic mail, sales data, contract preparation, and medical data, has been released by Digital Equipment.

The hard-copy unit, called the Correspondent, will link into any work and marks DEC's entry into the portable terminal market. Nigel Carruthers, European product manager for terminals, describes it

as being at the "premium end of the market", which is indicative of DEC's general strategy in terminal sales.

Carruthers refers to DEC's popular VT100 video as the "most copied and emulated terminal in its class", and claims that recently added features, which include graphics capability and the option to turn it into a personal computer, will ensure that the series continues to capture a big share of the high quality market.

DEC's terminal division has been outstripping the company's already high growth rates. Across the whole range of videos and printing terminals DEC reckons to have 15% of the market, with that share going up to 20% in the next five years.

With the enhancements to the VT100 the large number of terminal manufacturers who have been emulating the unit may find the carpet pulled out from under

them, particularly given the widespread interest that has been reported for the personal computing upgrade.

The Correspondent incorporates either a direct connection modem or an acoustic coupler, or both, has 132-column printing, and bit-map graphics capabilities. Costing from £1,351, the unit is designed to meet international Air Transport Association regulations for airplane baggage. Deliveries are scheduled for July or August.

Task force to coax UK into cashless society

by David Craver
A CONSORTIUM of UK companies to stimulate the development of personal microchip cards has been drawn together by the British Technology Group. BTG is acting as a catalyst for the work of the task force, which has been set up to counter advances made in the US and France.

Commenting that personal microchip cards are "obviously going to come into mass use," a BTG spokesman said the object is to get British technology know-how mobilised. Actual development of the cards will be left to individual companies, but BTG would be receptive to applications for funds at that stage.

Membership of the task force, called the Tokens and Transaction Control Consortium, is open to any interested companies, with a token donation necessary to fund the administration of the group.

A first meeting was held a few weeks ago and included British Telecom, Ferranti, Marconi, National Giro, Chubb, Cadre Systems, National Computer Centre, the Post Office, National Economic and Development Office, Pricewaterhouse, and the National Physical Laboratory.

NPL brings its expertise in cryptography to the task force. Personal identification is an important aspect of the card, which has a very small microcomputer and memory chip built into it.

The major clearing banks have not yet joined the group, although BTG is anxious to have their participation. "The banks' contribution would be crucial as the task force considers areas of standards, priorities and problems in developing the personal microchip card."

Further evidence that the cashless society is at hand comes from the 12 high street banks. They state that after the first year of a promotional campaign to encourage payment of wages directly to bank accounts, the number paid

on this basis monthly has increased by 600,000 to 5,650,000.

Terry Duffy, president of the Amalgamated Union of Engineering Workers has been exhorting union members to accept monthly payments, and says the union's own employees are being offered an incentive increase in salary of one per cent if they accept non-cash payment of wages.

An interesting aspect of the switch to monthly automated payments is that in many cases employers have passed on savings to employees in one form or another, an example of the benefits of new technology being shared with the workforce.

This has taken the form of a lump sum payment, increased employee discounts in retail operations, and other schemes.

There are now 2,300 cash dispensers in place between the 12 high street banks, and by the end of this year the figure will reach 4,500, a spokesman said.

DUFFY Exhorting union workers to accept non-cash payment of wages.

NEWS BRIEF

100 new jobs in Scotland

US-OWNED electronics and instrumentation company Brite Instruments is increasing its workforce at its Glenrothes facility in Scotland from 300 to 400. Another 30 people are planned to be taken on in May. The expansion is to meet strong demand for the UK-developed resistor networks increasingly used in electronic equipment.

Advice offer

AN association has been formed to give independent advice on computers and systems. The Association of Professional Computer Consultants will offer the services of independent people bound by code of conduct, and free of commitment, to any computer supplier. APCC is at 109 Baker Street, London W1M 2BH.

Top jobs decline

DEMAND for people to fill top jobs in computer companies fell sharply in 1981, although there was a national rise in the overall number of executive job advertisements. Computer jobs fell by 18% over 1981, whereas the total number of jobs (irrespective of category) rose by 22%.

Centre for sale

INTERLINK House, the former Vickers computer centre at Newcastle, is being offered for sale at £330,000. The centre, which closed last November, was an accounting and management base for the Vickers companies on Tyne-side. The installed computer is extra to the asking price.

Bumper plans

SYSTEMS Group, the California-based small business system manufacturer, is planning for a bumper year in 1982 with a growth forecast of 400% over 1981, last's record year.

Training for hire

A NATIONAL scheme for hiring training material will be set up by the National Computing Centre in March. Video tapes and packages such as Basic Computing Concepts will be available on a weekly or monthly basis, and will be on display at the NCC's regional offices.

Sales increase

CALIFORNIA-based software and systems house Informatics recorded a 19% increase in sales of almost \$126 million in 1981. Earnings rose by 25% in the same period.

Name change

SE Labs (EMI), the Middlesex-based computer technology arm of Thorn EMI, has changed its name to Thorn EMI Datatech. The company is a leading UK supplier of modems and data storage equipment.

Paper package

A PROCESS control and management information package specifically for the paper making industry has been developed by AccuRay of Columbus, Ohio. Combined with paper machine and pulp mill control systems, the MicroManager 8000 is claimed to provide a fully integrated process control and information network communicating with a wide variety of minis and mainframe computers.

CP/M in colour

AN interactive colour graphics package for microcomputers running under the CP/M operating system has been launched by Lifeboat Associates, a leading software publisher. Costing £255, the Gratic system includes a digitiser option and joystick mode with light pen support.

The Lady Henrietta Foxglove.

This is an advertisement.
For Abacus Electronics PLC,
newly authorised to sell Digital
terminals.

(Digitalis: the botanical name for Foxglove).

Abacus has large stocks of Digital terminals, printers, graphic displays etc., awaiting your pleasure.

We support this with a sales desk which will delight you with its knowledgeability and dedication to the customer.

We also have lots of software advice to give.

So try Abacus, the new authorised terminal distributor for Digital. You'll come back for more.

Apart from her charming name, Lady Henrietta's other significance is that she is one of a series of elegant illustrations, available in poster form.

Ring 0277 811131 and we'll send you a picture of Henrietta, beautifully printed on art paper.

A collectors item, you might say, just like the Abacus service.

Abacus Electronics PLC.

Zygal presents the Digital personal computing option for the VT 100.

Zygal Dynamics, already one of this country's leading suppliers of office computer terminals, now presents possibly the world's most exciting personal computer package - the Digital personal computing option.

The Digital CP/M personal computing option package includes: CPU (Z80), Dual mini floppy drives, Diagnostic disc, User documentation and guide, Installation hardware.

It means that the VT 100, the world's most widely used professional ASCII video terminal, can be turned into your own desktop office computer in minutes. No sacrificing easy-to-read, commercial quality video. And set-up functions you can personalize for yourself right from the keyboard.

Other features include: smooth split screen scrolling, double height double width characters, reverse video. It also features the decade's fastest-growing family of software - from high-level languages to everyday financial modelling, word processing, mail list, statistical packages and data base communications.

The Digital connection enables Zygal to offer a complete range of products for your every computing need.

Think Zygal for the Digital CP/M VT 100 personal computing option. Or any Digital terminal. Think Zygal for all the leading names - Diablo, Fujitsu, General Electric. Zygal is the last word in new ideas.

Zygal Dynamics plc, Zygal House, Telford Road, Bicester, OXON OX6 0XB. Tel: Bicester (08692) 3361. Telex: 837907.

Ten companies join the race to produce 256,000-bit chips

COMPETITION is rapidly intensifying in the race to be first into production with the next generation of memory chips, the so-called "super" chips, which will store at least 256,000 bits. About ten contenders are now in the field.

Many of the computing companies chose this month's International Solid State Circuits Conference in San Francisco either to add details to already announced designs, or to outline further developments to existing laboratory products.

The market for the chips is estimated to be worth anything between \$7 billion and \$15 billion by 1985, when they will provide the means to very fast new mainframes. These will include Gene Amdahl's Trilogy machine and ICL's L2000.

The characteristics of the devices, apart from increased capacity, include increased access time, without which the very high processing speeds predicted for the fifth generation machines will never be achieved.

To attain this very high access time the distance between circuits in the chips must be reduced from current production levels of three or four microns, to about one micron or less.

The key word is production.

Laboratory advances have enabled Fujitsu and Perkin-Elmer to achieve sub-micron circuitry, but translating one-off laboratory production into mass production at these very fine line widths, is not easy.

The most important announcements at ISSCC, therefore, were those which dealt with production, rather than development of the chips.

Although the limelight at the show went to Hewlett-Packard's announcement of its six-chip 32-bit microprocessor, the key 256K generation announcement came from IBM.

Engineers from the company described a seven millimetre square bi-polar silicon chip which can store 288,000 bits of data in 9-bit bytes. The 288K chip is not a standard configuration and does not conform to the general belief that the main memory chip in the next generation will be 256,000 bits.

The engineers who presented the papers detailing the chips both work at IBM's Burlington, Vermont-based semiconductor plant, where IBM claims to be mass-producing 72K chips currently.

This is the biggest chip known to be in mass production anywhere.

The IBM 288K chip is described as "being produced as an experiment from a production line".

LABORATORY PRODUCTION... Mass production becomes increasingly difficult as circuit dimensions reduce.

The access time for the chip is quoted at 350 nanoseconds, and the minimum feature size is 2 microns.

To further emphasize the company's pre-eminence IBM engineers described another non-standard device, this time a gate array chip which is in production at 4,208 gates and includes a 13K memory RAM.

Current gate array chip production is taking place at about 2,000 gates with Fujitsu implementing a 1,300-gate chip in the M380 mainframe which it will market with ICL.

Ferranti is sampling a 10,000-gate chip and LSI Logic in California is scheduling a 10,000-gate NMOS chip for production late next year.

To complete the American picture in the 256K race Bell Labs and Motorola both made announcements at ISSCC.

Bell will begin manufacture later this year on a 2.3 micron width 256K chip which the company expects to have an access time of 105 nanoseconds, the fastest time quoted for any of these chips.

Motorola is planning to show a 100 to 150 nanosecond access time 256K chip at the Wescon show in California in September.

The company has made no predictions about production dates but commentators think it will be at least 12 months before users have received properly evaluated samples of these products.

Intel, which stole the limelight at ISSCC two years ago when it introduced the first 256K design, made no follow-up announcements, and company officials say that next year is the earliest the company will be producing the chip.

It is currently selling a 128K EPROM which customers in Europe are now receiving.

Intel revealed details of its new production process CMOS III. With this process, which can implement 1.5 micron technology using 2 micron ground rules, it should be possible to produce 256K chips. Texas Instruments has said little other than that it has a 256K RAM in development.

The Hewlett-Packard announcement, while essential to computer product development, has important implications for the technology needed to produce 256K chips with reasonable yields and redundancy. The main aim of the six-chip microprocessor claimed to have 660,000 transistors on a single chip, which is also 50% more than most other manufacturers have been able to achieve.

The whole chip is claimed to be in production at one-micron technology. This is one to two orders of magnitude greater than any other known production technology.

With production at these levels of density, observers were surprised that HP had used six chips and a 128K RAM rather than, say, a 256K RAM and three chips.

But the key point at ISSCC was that none of the three key Japanese contenders for early 256K production, Oki, Fujitsu or Hitachi, revealed their plans.

News from the Japanese came mostly in the informal sessions, although the Hitachi marketing plan which is available now in the UK shows that the company intends to start marketing a 194-nanosecond 256K EPROM in summer and a 150ns 256K RAM in the autumn.

Officials from Oki were equally emphatic about their plans. The company has been shipping samples of 256K RAMs since last September, mostly to divisions of the company. Full production is said to be set for 1983.

Fujitsu, which sent a large number of delegates to the conference, was still maintaining its undisclosed position of last year. The company has a 256K chip which it will reveal in due course. NEC, which with Toshiba was a major participant in the VLSI project which produced the Japanese 256K design, is also reckoned to be either sampling or on the verge of sampling.

NEC/Toshiba, using a joint subsidiary, were reckoned to be the first to send samples of their new in companies in America by autumn.

Just as the US has been piped to the post, for world market share, by early Japanese production of 64K technology, it now looks as if the US is about to lose out just as significantly in the next round.

P-E's mini 'equals' mainframe'

by Maggie McLening
IN a bid to capture a slice of the mainframe market, Perkin-Elmer has added a new machine to the top end of its 32-bit minicomputer range, which it says gives mainframe performance.

The company strengthened its position in the minicomputer market by launching the low-priced 3210 model last year, to fight off encroachment by Data General, Hewlett-Packard and Digital Equipment, but now is aiming to extend its market to performance as well as price.

"There is an explosion of people wanting number crunching systems, particularly in the seismic and computer-aided design areas. The price of oil is making companies reprocess their old magnetic tapes of survey details," commented Fred Mascarenhas, Perkin-Elmer's product and marketing manager.

The new machine is a 32-bit "supermini", the 3250, and has been designed to handle large, complex applications such as scientific research, CAD/CAM and high performance commercial transaction processing.

It gives very high performance in TP applications: for any given level of VDUs, using the 3250 will give better response than a mainframe," said Roger Eden, Perkin-Elmer's new marketing manager.

A typical system including one Mbyte of memory, console, an 80-Mbyte disc drive, 75 ips dual density tape, floating point processor, battery back-up, 10 communication line ports and operating system costs £98,000.

A Universal Optimising Fortran compiler has also been announced by Perkin-Elmer for the whole range of 3200 equipment, including the 3250.

MASCARENHAS... Perkin-Elmer bidding for a share of the mainframe market.

"It gives very high performance in TP applications: for any given level of VDUs, using the 3250 will give better response than a mainframe," said Roger Eden, Perkin-Elmer's new marketing manager.

A typical system including one Mbyte of memory, console, an 80-Mbyte disc drive, 75 ips dual density tape, floating point processor, battery back-up, 10 communication line ports and operating system costs £98,000.

A Universal Optimising Fortran compiler has also been announced by Perkin-Elmer for the whole range of 3200 equipment, including the 3250.

Software house moves to where the oil is

by Philip Hunter
UK SYSTEMS consultancy Systems Designers Ltd, SDL, has opened an office in Aberdeen to exploit the booming demand from the oil industry for real time software. It claims to be the first large technical applications house to have done so.

Until now SDL has specialised in real time communications and defence systems on minis and micros. "We are now moving into the energy side," explains SDL's business development manager Richard Marsden. "Our work on the defence side transports easily to industrial and especially energy applications."

SDL expects to take between £500,000 and £1 million worth of business on the software side of the energy industry in the next year. Already it has landed a £200,000 contract from a big oil company for a process control system.

SDL will be supplying turnkey systems and supplementary staff to oil companies for real time production, mainly in the business of

moving oil from the wells to land. It will also make contributions on the refining side, where microprocessors to monitor flows, viscosity and ocean levels are already playing a major role.

"Aberdeen will be the Silicon Valley of the future," says Marsden. "Other software houses will soon follow us up there."

The Aberdeen office will be staffed initially from SDL's southern office, but will soon recruit local people. "We find it very difficult to recruit staff of sufficient calibre anywhere," Marsden complains.

SDL is budgeting for 40 new staff in 1982, mostly experienced systems engineers and consultants.

"We do take some graduates too," says Marsden, "but we don't let them out for a year or two until they are sufficiently experienced."

SDL employs 350 people, 260 of them technical staff. It turned over £7 million in the year ending December 1981, and has recently opened offices in Gloucester and Washington DC.

MARSDEN... "Our defence work transports easily."

Forty-one branches linked

by David Craver
A BRANCH teleprocessing system is being installed by the big Commercial Union insurance company, which will link computers at 41 branches. Almost £400,000 worth of data communications equipment has been ordered for the network from Thorn EMI Datatech, formerly known as SB Labs.

The network will allow all of Commercial Union's main branches to transmit new and amended policy information to the central computer in Whiteleaf, near Croydon. The data will be processed overnight on IBM main-

frames, and transmitted back to IBM 8100s located at the branches.

The branch teleprocessing system is being phased in at one branch a week, with all branches to be on the network by July this year. At first, the system will handle only motor and personal insurance, but will be extended to all other aspects of the company's business later.

The two types of Datatech modems to be used in the network are the 9620 and the 4820, which operate at 9600 bits per second and 4800 bps respectively.

in the balance of power..

4 MIPS at £140k Concept 32/87 always comes out on top

At £140K, Concept 32/87 is power at a price which is well below that of any comparable system. For example, IBM's 4341-2 system, giving about 2 MIPS, would set you back around a cool £200K. A VAX 11/780 system, giving 1.1 MIPS would cost you around £108K and Prime's 850 system giving 1.6 MIPS, would cost you around £175K.

At nearly 4 million Whetstone instructions per second, Concept 32/87 brings new significance to the notion of cost-effective computer power.

As the latest addition to Gould S.E.L.'s evolutionary 82 series, Concept 32/87 incorporates the benefits of over ten years of supremacy in 32-bit mini computer technology which has developed a range of price-performance winners starting with our 32/27 from around £40K.

Gould S.E.L. Computer Systems

VIDEOTEX SYSTEMS '82 CONFERENCE

Canard International Hotel
Hammersmith, London W6
May 5, 6, 7, 1982

This important two day conference will cover in depth, both technical and marketing aspects of videotex technology.

Presentations will be made by experts, drawn from the industry's leading equipment manufacturers, system operators and users.

Subjects include: Day One - The politics - Gateway - Direct transfer - Hardware and Software comparability - International networks. Day Two - Marketing the product - Economics - Umbrella services - The Canadian experience - Private systems - The next ten years. Speakers include: John Wakeham, MP, John Durham, Alan Holmes, David Gilbert, Ken Knight, Ted Sedman, J. Döring, Murray Cook, Tony Book, Jenny Clayton, Tim Chapman, Colin Tipping, Geoff Hunt, Andrew Whiting, Anthony Harris.

James Smith, John Marsh, Chris Singer, Mike Aston and Malcolm Smith. Conference organised on behalf of AMIP The Association of Videodata Information Providers Limited.

Run in parallel with
VIDEOTEX SYSTEMS '82 EXHIBITION
Canard International Hotel May 5-7

Full details from: Sue Bonnell, IPC Conferences Ltd, Surrey House, Throby Way, Sutton, Surrey SM1 4QQ. Tel 643 8040 Ext. 4889 and 4891. Please send details about Videotex Systems '82, conference/exhibition to:

US is losing 64K RAM fight

by Louise Kelsoe
AS prices for 64K dynamic RAMs continue to fall - the lowest prices are reported to be \$4 each for high volume orders for now parts on a long delivery schedule - the prospects for any US semiconductor manufacturer making a profit in the market are fading.

"Although optimism looks for a slight rise as demand increases, others have already conceded the market to Japanese suppliers."

"I think one school of thought has it that the best defensive action is to forget the 64K RAM and concentrate on bringing a 256K RAM to market," others argue that US manufacturers have put too much money and time into the development of 64K RAMs to be turned out.

Among the US manufacturers, Intel, National Semiconductor and AMD have still to bring a 64K RAM to market. Intel is rumoured to be on its fourth or fifth design - and still to be having problems. The company has put back the introduction of its product until the third quarter of the year.

National Semiconductor's 64K dynamic RAM is also still not available. It incorporates an innovative triple polysilicon layer that makes it more complex to produce.

Texas Instruments and Motorola are the only US manufacturers currently supplying 64K RAMs. Motorola has recently introduced a newly designed part faster than its previous design. According to a company spokesman, the part is specified at 150 nanoseconds access, but is

yielding well at 90 nanoseconds. This will allow Motorola to supply 120ns parts when demand for faster RAMs picks up. According to industry sources, most customers are looking for 150ns access time now, although they expect demand for 120ns to pick up next year.

Motorola and Texas Instruments are between them estimated to hold about 30% of the world RAM market, but Japanese manufacturers supply the rest. TI has been more successful with the US mainframe manufacturers, while Motorola has sold a lot of parts to distributors and minor accounts.

In the 64K RAM market, mainframe customers are said to account for only about 50% of the market - a much lower proportion than in previous generations of dynamic RAMs.

Motorola are the only US manufacturers currently supplying 64K RAMs. Motorola has recently introduced a newly designed part faster than its previous design. According to a company spokesman, the part is specified at 150 nanoseconds access, but is

yielding well at 90 nanoseconds. This will allow Motorola to supply 120ns parts when demand for faster RAMs picks up. According to industry sources, most customers are looking for 150ns access time now, although they expect demand for 120ns to pick up next year.

Motorola and Texas Instruments are between them estimated to hold about 30% of the world RAM market, but Japanese manufacturers supply the rest. TI has been more successful with the US mainframe manufacturers, while Motorola has sold a lot of parts to distributors and minor accounts.

In the 64K RAM market, mainframe customers are said to account for only about 50% of the market - a much lower proportion than in previous generations of dynamic RAMs.

National strategy is boosting Japan into fifth generation

In a year in which some of the most innovative managers in the computer industry, Gene Amdahl and Robb Wilmot among them, have identified one Japanese company, Fujitsu, as the likely source of the most advanced microelectronic technology for the remainder of the 1980s, it has become essential to try and understand exactly what the Japanese are planning to do in the computer field. And exactly how they intend to apply this advanced technology.

In the preliminary report on the fifth generation computer project which was released and discussed publicly late last year, the Japanese have done much to tell the world what they intend to produce in the next 10 years.

If they succeed they will hold the key not just to computer development, but to the off-predicted application of computer technology for uses throughout society.

In this phase computers become the key factor in the conversion of data into information for decisions, and ultimately the devices on which mankind relies for the monitoring and control of society and its infrastructure.

In the preliminary report, the first thing the Japanese academics and industrialists define is what they expect the machines to contribute at a social or, if you like, political level.

In the first place, says the report, "fifth generation computers are expected to increase productivity in low productivity areas."

This hackneyed phrase conceals the most ambitious aim of all, which is to help make Japan self-sufficient in food.

The report identifies "farming, fishing, distribution and public service as four of the essential areas which have benefited the least from computers and automation so far."

Describing the failure to automate in those four areas as "the cause of serious social imbalances", the report elaborates the framework into which the fifth generation is expected to deliver its productivity goods. "The framework is a liberal, wealthy society which has overcome the constraints of resources and of energy."

The instinct is to dismiss those plans as pious eyewash, but the project and its aims are in the mainstream of the kind of grand national strategy which has pulled Japan from an also-ran into the lead position in one manufacturing industry after another.

The most pertinent of the pro-

jects for computer companies and users is the recently wound-up, £120 million VLSI scheme.

Using their technique of setting collective goals in a framework broader than the specific technology they are addressing, four Japanese companies will this year commence volume deliveries of 256K dynamic RAM chips. Nippon Electric, Old, Fujitsu and Hitachi are already at this level of development while most computers use 16K memory chips and even 64K components are not universal.

Unlike the VLSI project, which ran for two and a half years, the fifth generation computer project will probably run for six or seven years. It will eventually be wound up by a combination of a complete transfer of the technology to general industry on the one hand, and on the other by the spread of specific applications to affect issues so broad that their use becomes a political decision.

Interestingly, the first aim of the fifth generation excludes all mention of military applications.

"Fifth generation computers will be a central tool in all areas of social activity," says the report,

"including economics, industry, science and art, administration, international relations, education, culture, daily life and the like."

As befits the Japanese method of avoiding direct statements where possible, this part of the report is littered with the implications of things left unsaid. But the ability to plan for a new generation of computers with no direct military application and built without military ends in mind will alone give Japan something like a two-year production lead on the Americans and a four- to five-year advantage on the Soviet Union.

This conclusion can be drawn from the level of funding and subsequent output which the US computer industry gets for military applications. Direct military "specification" funding was running at about \$3.5 billion in 1981, and will go still higher with President Reagan's latest plans.

Although military expenditure, particularly in the US, has always been credited with helping to get new developments into early commercial production, the Japanese are now saying that by creating a big enough social and political requirement, their technology can

similarly be driven to new heights of inventiveness.

This leads directly to the second and more overtly political goal of the fifth generation computer project.

According to the preliminary report, it is "to help Japan meet international competition and contribute towards international co-operation."

"Although we have mainly followed the lead of other countries in computer technology up to now," it goes on, "it is time for us to break with this outmoded tradition, and centre our efforts on the development of new computer technology based on our own conceptions, so that we can provide the world with new technology for international co-operation."

Again it is easy to dismiss this kind of language as sentiment. That, however, would be a failure to appreciate the strong element of pacifism within Japanese life. Japan is very much a community. Concern for the community and unwillingness to go against its consensus colours much of what the Japanese do. It is in sharp contrast to the every-man-for-himself attitude inherent in the Western, and particularly American, commercial ethos.

The phrase "international co-operation" reveals that Japan is becoming increasingly conscious of the need to eliminate national barriers of trade before they can cause friction.

While clearly stating that the fifth generation project is Japanese, and will remain under national control, the participants from the government down are determined to stem future complaints about competition by sharing the project with the world.

The report identifies four specific areas in which the Japanese foresee international co-operation under the fifth generation project. They are:

- Construction and maintenance of database;
- Development of language translation and interpretation systems;
- Improving productivity with the aid of intelligent robots; and
- Accelerating research and development by using intelligent CAD systems.

Another stated aim for the fifth generation computer project is one that will appeal to all practical souls, though, for the Japanese, being practical at the level at which this project was conceived virtually coincides with national survival.

The report says simply that the information technology industry (and particularly its fifth generation component) should assist in saving energy and resources. A country which has a shortage of land and a population density about 40 times that of the US cannot attain self-sufficiency in food using existing methods. And the current level of self-sufficiency in energy is only 15% and that of oil a mere 0.3%.

There is nothing in the report which overtly ties the plans for conserving resources to commerce and profit. But it is plain that any country which leads in systems of this kind will have very saleable products available for international customers.

The very general areas in which the Japanese expect fifth generation computers to make a significant improvement are stated as:

- Level of energy use;
- Improvement of energy conversion efficiency;
- Simulation for use in developing new resources of energy;
- Reduction of energy consumption in production using CAD/CAM techniques;

It suggests:

- Improvement and streamlining of medical and related information processing systems;
- Development of systems for helping the physically handicapped become active;

In the second instalment of this two-part report Kevin Cahill will examine how Japan intends to pursue its fifth generation computer goals.

Takayoshi Shima, pursuing the fifth generation goal of getting computers closer to the people, so that the next generation of computers will deliver genuine and widespread social benefits.

- Extension of product service life through damage detection and automatic recovery; and
- Reduction of the need to transport people unnecessarily by employing distributed systems.

The last of these aims, while among the most desirable when transport is a very large user of oil, may prove by far the most difficult to achieve. In essence it is the problem of why full trains pass each other every morning taking people to do essentially the same work, at about equally inconvenient points from where they live.

That final point might easily be overlooked because of its laudatory position in the report, but it is in fact a reflection of a key element in modern Japanese thinking about computers.

Take the story of a Japanese-style entrepreneur.

One of the great modern business success stories is Matsushita. A company with a turnover of \$13.6 billion was founded and run for many years by one man, Kōnosuke Matsushita.

When Matsushita retired he founded a university and started a magazine, with the title Peace, Prosperity and Happiness. Not the kind of banner to set the Western world alight, but nonetheless the name of one of the biggest-selling Japanese monthly magazines, commanding a circulation of over 1.2 million.

The content is about better ways to live. A central strand in Matsushita's philosophy, which has also emerged in the management philosophy of people like Takayoshi Shima, the man behind microcomputer manufacturer Sord, is that one day computers will liberate us all from the curse of commuting and free us to return, Thoreau-like, to the land.

That one phrase about enabling people to work from home expresses more about the real direction in which the Japanese hope the fifth generation computer will take us than most of the rest of the report. In Japan land is scarce and homes are small. So working from home and going back to the land has huge social implications, many of which do not even apply in other parts of the developed world.

They are bound up with vast amounts to the report's closing word on goals. It is that the fifth generation must be developed and introduced with great care. Technology must not allow rulers to use computers as a tool for controlling subjects.

An admirable goal. If it can be achieved.

Preliminary Report on Study and Research on Fifth Generation Computers, from Japan Information Processing Development Centre.

In the second instalment of this two-part report Kevin Cahill will examine how Japan intends to pursue its fifth generation computer goals.

SOFTWARE FILE

Systems house gets its fingers burnt over distribution rights

CONFUSION over distribution rights has forced a split in the UK marketing of a database management system for microcomputers.

Software house Infodata has learnt that its rights to the system, called FMS 80, which it bought from US software distributor, are to be shared with Reading-based systems and software house Tero-

dec thought were exclusive rights to market FMS 80 in the UK. Shortly after announcing its availability, Infodata discovered that Tero-

dec was also selling the product, having bought it direct from its designer, David Rodman of DJR Associates in the US.

Rodman claims that Systems Plus did not have an exclusive contract, and that although he knew that Infodata had approached Systems Plus, he had no

idea an agreement had been signed.

"It was done behind my back and completely without my knowledge," he says.

Negotiations between DJR Associates and Terodec started in mid-December when Paul Joyce, managing director of Terodec, visited the Comdex exhibition in Las Vegas. Joyce was impressed by a demonstration of FMS 80 that he saw on the Systems Plus stand, but he went direct to David Rod-

man. The result is the FMS 80-based Terodec Information Management System (TIMS), which Joyce is now selling for use on any microcomputer with a CP/M or CP/M compatible operating system.

"David and I really understand each other and will do our best to work together," enthused Joyce. Rodman was equally enthusiastic about Terodec: "Other than pride of authorship, watching my children grow, it's exciting to see the product used as it was intended," he said.

One of the major reasons for the success of FMS 80 is the integral Shell 80 package which provides a uniform operating environment for it within CP/M, and is modelled on Unix, the portable time sharing system.

Infodata, though disappointed over what has happened, is also being philosophical, according to Paul Armour, marketing director. "If anyone has been bitten, it's Infodata," he commented. "Naturally this has caused us a few headaches, but it's a very big market and I hope we can work well together."

Infodata is aiming at the manu-

facturers' market, while Terodec is trying to sell to dealers.

Infodata is now no longer dealing with Systems Plus. Rodman says that he has put Terodec and Infodata on an equal footing and both are now contracted directly to his company. He emphasised that what has happened is not Infodata's fault and that he does not want to see the company hurt by it.

Neither side will disclose the exact sums of money that have changed hands. Joyce of Terodec said that he had paid heavily for the product, while Armour commented that the price had not been unreasonable or excessive.

Systems Plus will not commit itself on the question of whether it did own exclusive rights for UK distribution at the time FMS 80 was sold to Infodata.

"There was a lack of communication, and it was right in the middle of transferring the rights to DJR Associates," commented Sam Omroo of Systems Plus.

Called IF, the product is an interactive model builder which needs no computer experience to use it, according to Heather Simpson, managing director of Bond Associates. "We looked at every other product on the market and decided that one of the major criteria was that it should be simple to use," she confirmed.

Data is set up in a matrix with 96 vertical columns and 256 horizontal rows, and can then be manipulated using the matrix co-ordinates and standard mathematical symbols. The screen acts as a window, so that any section may be worked on, or two sections simultaneously using a split screen.

A feature of IF which Bond As-

RODMAN... "It was done behind my back."

JOYCE... "David and I really understand each other."

Westinghouse/On-Line deal

SYSTEMS software supplier Westinghouse Management Systems is to market packages for San Francisco-based On-Line Business Systems in the UK, Europe and the Middle East.

A specialist in products for the IBM market, Westinghouse has made significant growth through its low pricing policy.

To cement the deal, On-Line Business Systems has supplied Westinghouse with a program de-

velopment system called Wilbur, which may be able to act as an electronic mail system in a future version. At the moment it provides document formatting and RDP production capabilities to OS and OS/VS installations.

It can also offer a substantial reduction in the resource requirements of TSO in medium to large time sharing installations, according to David Hazlewood, UK manager of Westinghouse.

SHEARMAN... His prize-winning system automates testing of sheet steel for defects.

Testing device wins design award

MICROPROCESSORS pop up everywhere these days, even in competitions to encourage good engineering design.

A microprocessor strip-steel profilometer won Kevin Shearman of the University of North Wales in Bangor £250 in the 1982 Design Council Molins Design Prize. The contest is sponsored by Molins, a company known for precision en-

gineering.

Developed in conjunction with British Steel as a project for Shearman's final year as an engineering undergraduate, the system automates testing of sheet steel for defects. It also means that the testing can be carried out by unskilled personnel.

The device carries an ultrasonic transducer across a steel strip, tak-

ing thickness readings on its way, and giving an alarm if it detects defects such as deep grooves, laminations or peaks in the steel. All this is controlled by an 8085, with memory, I/O and timers in a five-chip system. As a background to the program actually running the mechanics, programs analyse the data and activate the alarm, time sharing through interrupts.

Micro vendors polish up sales techniques for small business market

VENDORS are having to re-think marketing techniques for small business computers as micros take over from minis and mainframes. Lower cost hardware means direct sales calls are no longer feasible, and more efficient sales methods are needed to survive the growing competition.

According to a market research study from Frost & Sullivan, there are more than 100 microcomputer manufacturers jockeying to cash in on a retail computer market with millions of prospective buyers.

To get at these, microcomputer vendors are exploring a multiplicity of different distribution channels, using a wide range of advertising themes and media to awaken businessmen to the possibilities offered by computers.

The study is concerned with small business computer use in the US, where it estimates there are 3.5 million businesses employing

fewer than 500 people. Only 200,000 will have small computers by next year, the study estimates, leaving a market ripe for picking.

Small computers serving this will grow at more than 30% compared to less than 20% for large machines.

A user survey included in the study showed that the majority of users expect to spend less than \$20,000 on their systems, with Tandy and Apple systems the most frequently bought and the most often desired.

Nearly two-fifths of these were bought at retail outlets, with direct purchase from manufacturers running second. Despite this, it appeared that customers would prefer to buy directly from manufacturers.

Most retail sales are made through independently owned stores, the report says, but computer manufacturers' stores, including IBM, DEC, Xerox and Tandy (Radio Shack in the US) show good overall growth prospects.

The report warns, however, that "those stores that sell their own proprietary systems only are threatened by similar stores that offer a variety of products."

Office equipment stores and department stores are also beginning to get in on the act, though department stores are seen as catering more for home users than for business interests.

The report adds that the market for home computers is not strong yet, as was shown by the failure of Texas Instruments' 99/4 personal computer, targeted strongly at home educational uses.

OEMs dealing with small business computers are moving more into vertical markets, supplying specialised software for particular businesses like construction, sporting goods or food distribu-

tion, which are not accessible to retailers selling general packages.

More than half of the OEMs specialise, the report estimates, and they tend to supply microcomputer hardware rather than micros.

The Frost & Sullivan report confirms the findings of other studies about trends in microcomputer marketing in the US. "Companies are experimenting with the right marketing mix, using trial and error and quickly abandoning unsuccessful approaches."

"In the next several years, the main targets of computer marketing will shift from data processing professionals to businesspersons with no DP background."

Price is the most sensitive criterion for choosing systems, says the report. Application software, adequate terminals with full-size screens and colour graphics, as also high on customers' priority lists.

Timex sells ZX81 in US

IT is not quite a business computer, but the Sinclair ZX81 is a get wider marketing in the US through an agreement between Sinclair Research and Timex, the big US watch manufacturer.

Timex is already a subcontractor manufacturing the ZX81 microcomputers in Scotland. Under the marketing agreement it will sell the micro through its 175,000 US retail outlets under the joint Sinclair/Timex range.

Sinclair's existing mail-order business based in Boston will continue until sales at the Timex outlets reach agreed levels.

All you want to know about home computers

LOOKING for the personal computer that really suits you and your family? Bemused by the abundance of software packages, cassette units, printers and terminals that you could use with the machine you choose?

Then maybe what you need is to visit the Computer Fair at London's Earl's Court from Friday, April 23, to Sunday, April 25.

The show covers personal computing, home computing, small business systems and the software and peripherals that go with them. It is designed to appeal to everybody, strongly featuring the second wave of personal computers catering for the needs - and purses - of the home computer buyer.

Special attractions at the show will include the ZX81 village, where some 30 companies will be demonstrating software and add-on hardware specifically for the Sinclair ZX81.

Visitors will also have the chance to see computer-controlled "mice" trying to find their way in the centre of a maze in the Mouse Contest. There will be knockout bouts and the European British final. Last year's winner was a British entry.

The Computer Fair is sponsored by Practical Computing and You! by Practical Computing and You! For more information, contact Philip Kirby, Practical Computing, Quadrant House, The Quadrant, Sutton, Surrey, SM2 5AS. Tel: 01-661 3127.

Price cuts

SYSTEM products from Intel are to cost less, particularly to educational users.

Development systems and peripheral units are reduced by about 10%, as are in-circuit emulators. Single board computer products are reduced by up to 25%.

Educational discounts of 15%, which have applied for some time, apply to the new prices. Larger discounts, of up to 30%, are offered to educational users of Intel's software, including the range of high level languages.

The price reductions are seen as a move to persuade new users to standardise on Intel equipment from the start.

New to UK

A FULLY boxed system from Nascom Microcomputers, the Nascom 3, is now available from dealers in the UK and Europe. Like the earlier Nascoms 1 and 2, it is based on a Z80 processor. It comes with 8K or 32K memory, expandable to 60K.

The machine is aimed at the educational and business user, and can be configured with cassettes or floppies. Operating systems available include CP/M version 2.2 and NAS-DOS, Nascom's own operating system. The machine can run on Basic, interpreted and compiled, and Pascal.

Hardware, built in the UK, starts at £376, excluding VAT.

What lets you avoid unaffordable risks at an unrefusable price? MOMENTUM!

Resilience. The ability of your on-line transaction processing computer to bounce back after a failure.

Do you need it? Of course. How much should you buy? As much as will prevent a down computer from placing your organisation in an unaffordable position. If you can afford it.

With CTL computers you can. Because they have

MOMENTUM!

MOMENTUM is unique because it gives you a choice. You buy the degree of resilience you need now - at a price you can afford now. Even if the CTL computer you start with costs only £40K.

When you need more resilience, you add more. Right up to full non-stop transaction processing!

WELLS... "High rewards, even in the early stages."

Software house sees 600% rise in micro package sales

THE UK packaged software industry for microcomputers is expected to grow to more than £100 million a year within the next two years.

The cost of getting into this potentially lucrative market are high, but the rewards even in the early stages are also high, according to Vince Wells, managing director of software house Omicron. He predicts that Omicron will move sales this year to £300,000, a 600% increase on last year.

It also represents a turnover of £50,000 per employee for Omicron's staff of six, which is no mean attainment in an industry where average turnover per employee is £22,184 (Greene and Co.).

Wells emphasises that Omicron is still in the set-up phase. "We began the company two years ago with the aim of having our products ready for the market last July and August." In fact, it took Omicron six months longer than anticipated to get its product, a complete accounting system de-

signed to run on any CP/M microcomputer, fully operational. The complete package consists of six separate accounting functions: payroll, sales ledger, purchase ledger, general ledger, order entry, and stock control, and sells for about £700.

The way the complete package was put together illustrates the sacrifices inherent in going it alone, according to Wells. Throughout last year neither he nor his co-founder, Ron Sandford, took any money out of the company.

From the first discussion between Wells and his team about two-and-a-half years ago, the project has absorbed the best part of £100,000, most of it put up as loans by Lloyds Bank.

Wells, Sandford and software designer Bernie Beech put in £10,000 of their own money, and each gave up several years' earnings to get the company to the point where the product was ready for the market.

Wells believes they now have a world-beating product. He says that when Beech first suggested that the market for micro software packages was sorely in need of professionally prepared and supported software, he and Sandford immediately agreed.

All three have different backgrounds, but the common factor at the time was that they were all working for Rio Tinto Zinc on the financial software side.

Having decided that the product they wanted was a complete package which would integrate all aspects of accounting, and cover the needs of small and medium sized businesses, Beech took on the task of producing the six key programs from scratch. Work really began less than two years ago, according to Wells.

When they had the specifications clearly established and programming was under way they went to Lloyds Bank with a carefully prepared business plan which, Wells emphasises, concentrated on cash flow. With the initial £25,000 that Lloyds made available work began in earnest.

The slipage which occurred did not affect the cash flow projections, partly because Wells and his two partners had been ultra-cautious in their cost and revenue projections.

He says that when they agreed projected sales, they slashed the estimate in half. And when they finally agreed the cost of the various elements of the project, they doubled the estimate.

And Wells and the Omicron directors applied a rule to the package which would make most systems analysts blanch.

They decided from the beginning that the package to be released would be virtually fixed, and not designed for a series of constant updates.

This is tantamount to saying that the first release is the last and must by definition contain all the necessary accounting functions that are likely to be needed.

Despite the emphasis on caution Wells admits that the interest

shown in his product, even before it was available, was extraordinary.

The company has so far had no formal advertising, relying most entirely on word of mouth. Wells describes the situation six months ago, when they first started to release details of the package, as "a mad-house." They were rushed off their feet with enquiries and advance orders.

To support its selling effort Omicron has made two financial investments other than directly in the software itself.

Concentrating all the time in the end user, and remembering that their dealers would want a product which needed minimum of explanation and support, Wells and his partners spent heavily on a single set of clear and attractive brochures.

Allied to this was a substantial spend on training manuals and incorporated features which made the Omicron software easy to buy and use.

The screens all come with help features and the user has virtually no contact with the system features which frequently mislead packages confusing to non-computer trained personnel.

Wells says that when they were specifying the packages they decided to treat a small business - the sort of two- or three-person operation which would buy the software - as a big business's embryo.

That way Wells reckoned they got all the accounting features a large company would want in a software that even a two-man company would need.

Wells describes Omicron as a software factory, turning out a complete product for the dealer and the end user.

He says the company is already very profitable, but cautions that in the start-up phase it is cash flow which brings most companies down.

Omicron got its product complete and into the marketing phase with a variation of only £1,000 on the original cash flow projection.

Californian link extends BCL product range

BUSINESS Computers (Systems), one of last year's entries to the Stock Exchange's Unlisted Securities Market, has linked up with a US company to introduce a new 16-bit computer system in the UK.

The financial community eagerly awaits the BCL results which are due next month. Managing director Mike Munnally would not be drawn on the figures, but said the company had maintained its pattern of growth.

The link with California company Rexon gives BCL a major extension to its product range, according to Munnally.

The Intel 8086-based system will be known as the BCL 3300 in the UK and is described as a powerful, multi-tasking computer which slots in at the top end of the BCL product line.

The line still contains the Molecular series machines and Munnally revealed that sales of the Molecular system were still high, with 11 systems delivered in December.

He described the marketplace as very tough, with a lot of companies running just to stay in the same place.

He said many companies were now looking to computers to obtain productivity gains which were no longer simply a desirable goal, but a basic element of survival.

The president of Rexon, Dr Ben Wang, attended the launch which marked the first appearance of his machine in the UK. Rexon has

MUNNALLY... "Maintaining our growth pattern."

already sold over 200 systems in Europe, and Wang said that he was looking forward to working with BCL.

His own company, Rexon, was a relative newcomer to the computer industry, he said, but had already made him a millionaire and would shortly be going public in the States.

Wang described the product he was offering BCL as a well-established processor designed for businessmen by businessmen. He does not go in for pioneering.

"All you get for pioneering products in your customers' offices is arrows in the ass," he said.

FEENEY... Sales revenue up.

Profit and sales up at Hoskyns

PROFITS and sales turnover at London-based Hoskyns Group has continued the sharp upward trend of recent years. Sales revenue, 21% up on last year, passed the £20 million barrier for the first time, to reach £21.4 million.

Profits, which were badly hit in many companies last year, rose 36% pre-tax. After charging R&D against the trading results the final profit was £1.7 million.

Jim Feeney, Hoskyns' managing director, says that company policy of recruiting high quality staff over the years has paid dividends.

Two areas of Hoskyns' business have provided particularly large contributions. MAS (Modular Application System) software which runs on a wide range of machines, accounted for over 30% of turnover.

During 1981, Hoskyns made over £4 million in sales of its Crossroads service, which helps users to migrate from old and obsolete equipment to newer, more advanced kit.

US-Japan battle heats up in 64K chip market

THE Americans and the Japanese appear to be heading for a critical round of bickering over Japanese pricing and dominance in the emerging 64K memory chip market.

The first of these chips are now beginning to appear in commercial computers, such as the Fujitsu-made, ICL-marketed M380.

In Japan, the Ministry of International Trade and Development has already warned Japan's six largest semiconductor manufacturers, Fujitsu, NEC, Hitachi, Oki, Mitsubishi and Toshiba to exercise care in exporting to the US.

MITI has expressed most concern about the aggressive pricing attitude taken by the Japanese companies.

The US firms have been cutting prices themselves in the 16 and 64K RAM market, primarily to prop up sales in a poor area. This has driven the price of a 16K RAM down by 75% to £1 in one year.

The 16K RAM market was initiated by American companies like

Mostek and Intel and the largest share worldwide was held by the Americans, with the Japanese making real inroads only in the past 18 months.

The extent of Japanese penetration has also been obscured by weakness in the American marketplace - not felt in the Far East where burgeoning production of consumer goods absorbed most of the Japanese production.

But the 64K RAM market has been initiated both in America and internationally by Japanese companies geared up to reverse the pattern of US domination in the earlier 16K market.

The 64K market started with prices of about £20 for a single chip delivered in volume, in the middle of last year.

Already, mostly under very aggressive marketing by the Japanese, that price has been driven down to £6 to £7 and a spokesman at Intel said that the company expected to see the price fall by 50% to about £4 by the end of the year.

In the wake of this price-cutting drive, the Japanese companies have captured just under 70% of the world 64K market. A recent Datquest survey, reproduced in the American business magazine Fortune, shows that Hitachi leads with 40% of the market followed by Fujitsu with 20% and Nippon Electric (NEC) with 6%.

Of the American companies, Motorola leads with 20% of the market and Texas Instruments holds 7%. Other American companies, which complain of the Japanese victory in the 64K marketplace, ends by hoping that US companies might recover their dominance in future chip generations.

The magazine also shows that the Japanese have already begun sampling the 256K chip which is expected to follow the 64K, and which few American companies can hope to deliver before 1984 - by which time the Japanese expect to be in full production.

AGGRESSIVE marketing by the Japanese has driven down the price of 64K memory chips to a few pounds.

We're rich in the key resource for successful software development.

That's why more and more computer software development is locating in Ireland.

They're coming to the country where over 50% of the population are under twenty-five years old. These young people have grown up with an educational system specifically tailored to equip them for this technological age. Each year sees a further upsurge in the resources devoted to higher education in technical areas. Fields like engineering and computer science.

It is these young people who provide a workforce potential unequalled anywhere in Europe or the U.S.

But Ireland is more than a rich source of educated staff. In Ireland you will find an attractive incentive package specially designed to meet the needs of technology-orientated industries. Industries where personnel is the key factor.

Ireland offers 100% training grants to new service industries and generous employment grants. And these are just two of the cash grant programmes available. In addition, you'll find that Ireland has the lowest corporate tax structure in Europe.

You will also find a working environment that is second to none in an age where employees rightly expect their job to permit an attractive lifestyle as well as simply a good salary. Because, in Ireland, while keeping pace with the changes dictated by this technological age, we've managed to retain all that is good in our environment and way of life.

Find out more about locating in Ireland. Contact the nearest office of the IDA Ireland for further details. We'll be glad to help.

REPUBLIC OF IRELAND
The intelligent location
in Europe for international services

IDA Ireland

The Irish government's industrial development agency has offices in London at 58 Davies St, London W1P 0LE. Telephone: 01-928 6941. Offices also in Dublin, Amsterdam, Frankfurt, Cologne, Stuttgart, Milan, Copenhagen, Madrid, New York, Chicago, Los Angeles, Houston, Cleveland, San Francisco, Boston, Fort Lauderdale, Sydney and Tokyo.

"Clear the desks for System Alpha"

The world's first Teleputer system

System Alpha is a new multi-technology communication system.

It combines television, personal computing, videodata, videotex, VCR or videodisk and telecommunication in one simple to use multi-media, multi-purpose workstation.

It takes up as much space as a hi-fi system.

System Alpha offers a variety of models based on a 14" colour videotex terminal with local page store, PSB interface and many other sophisticated facilities, plus choice of keyboards and printer.

Facilities include:
* VCR or videodisk * Local microcomputer with 64Kb memory and twin floppy disk storage

for processing * Choice of two operating systems * Videotex microcomputer for telecommunication

System Alpha is versatile. It can be a computer terminal, a word processor, a computer-aided learning system, a mail order catalog, a remote batch terminal, a data processor, a videodata/videotex terminal, a colour graphics computer or simply a first class colour television.

It can be used in home or office

- by anybody who can use a keyboard.

Never feel safe with human-made systems

The Eighth Law of Reliability: All real programs contain errors which will prove otherwise - which is impossible.

WE must never feel 100 per cent safe with programmed systems. Like any other human-made systems they are ultimately subject to failure. We have to consider this in our total system design, and prepare the way for detecting these failures.

It is the responsibility of the systems architect (Infotec) to consider every possible system component failure and to have a satisfactory alternative ready for use. In too many environments there is no such Infotec, and programmers are left to do the best they can.

But, according to this low level of failure is not enough to prevent failure.

Perhaps as a temporary measure, those programmers who find there is not enough design work to prevent program failure from hurting the users, can undertake the responsibility of designing adequate protection against the programmed errors. At the very least, any programmer who accepts this law, is morally responsible for warning system users not to rely too strongly on a single program. And to "campaign" for adequate back-up measures to be designed into the system in advance.

John R. Garman, deputy chief of the Spacecraft Software Division of NASA, shared the tale of a very public software error which delayed the first Shuttle orbital flight on April 10, 1981 (ACM Software Engineering Notes, Oct, 1981). He says, "There was a bug - a very small, very improbable, very intricate, and very old mistake in the initialization logic... It was the type of mistake that gives programmers and managers alike nightmares... It was the kind of mistake that 'cannot happen' if one follows all the rules of good software design and implementation. It was the kind of mistake that can never be ruled out in the world of real systems development... Software is the easiest to change... but in change, it is the easiest to compromise."

He then goes on to explain the extraordinary measures taken to reduce the probability of such embarrassing errors happening before world television audiences. As a starter, the primary system consists of four replicate on-board computers - in case one fails, you still have two out of three "voting" system for automatic correction of an error to one of the remaining three. But the four programs in the four computers are identical and a bug in one of them will occur in all of them.

So there is a fifth computer on board with a program developed in the same programming language, to the same requirements specifications, and with the same compiler as the primary four computers software. But it was developed by "an entirely different and remote organisation" (Rockwell International, California, as opposed to IBM Federal Systems Division, Texas, for the primary system).

The systems also used entirely different operating systems developed by the same two software suppliers.

The software bug was complex to describe - Garman used ten pages. But it was detected when one of the systems tried to monitor what the other was doing. This long list of error detection strategies which had failed to detect the

problem only adds to my conviction that "operational testing" is a necessary part of highly reliable systems.

I don't mean that this applies to all programming, any more than the use of multiple computers does. But we have to destroy the widespread illusion that "software does not wear out." It hides faults just as do materials with potential faults. And it can be corrupted by the force of change - one half of all programming activity today is maintenance - just as surely as nature corrupts materials.

Garman says it too, since the bug was a result of a maintenance change. "The lesson from the bug is that I plea is directed to the academic and software engineering community: help us find ways to reliably modify software with minimum impact in time and cost. Not perfect reliability, because projects will always back off to trade for time and cost."

In my worst moments of despair, such as when considering the tens of thousands of known bugs in the operating systems of major manufacturers (ask your systems programmer), I have a consolation.

Tom Gilb is an independent consultant, lecturer and author on computing topics.

Each of us has about 30,000 million bacteria in our bodies; and no more hope than Howard Hughes of getting rid of them. Fortunately nature has provided our body systems with an equivalent amount of anti-bodies and white blood cells, as well as a suitable body component redundancy; so we survive fairly well day to day.

I hope you have provided your programmed systems with as much protection against the inevitable bugs as has nature done for you.

Tom Gilb

Your life in the data stars

FOR long the champion of all matters computing, the National Computing Centre appears to have changed aides. In a promotion campaign the organisation is now declaring, "Computers do not solve problems, they create them."

The NCC does not appear to be proposing any alternative - apart perhaps from advising would-be computer users to make use of the latest British Telecom service Starline which provides a national daily horoscope. The star predictions are plotted with the aid of a computer which can chart the position of the stars to a high degree of accuracy. Whether the general assessment of the astrological influences will give prospective computer users reassurance, inapportion or despondency can only be discovered by a call to the stars.

Few DP teams will have time to consult the Starline oracle. They will be far too busy dealing with more practical and down-to-earth problems - such as basic matters as freeing the jammed line printer, clearing jammed workload backlog and coping with the jammed mass of motorbikes clustered around the installation door.

Any calls to British Telecom will be more concerned with the delivery of the long-awaited modem, extension phones, personal bleeping systems and international tariff rates, than establishing astrological datacom lines. Similarly, calls to the NCC are more likely to be requesting datacom standards interfacing procedures than seeking solutions to standard problems.

A major role of DP management - one which emerges on the day of the implementation of a new system, application package or fresh operational input procedures - is distributing considerable doses of confidence and reassurance.

At a time when all about us and the installation are shrouded in an unseemly sea of engineers, cobbles, oscilloscopes, equipment and services supplies and support heads, it is the duty of the DP manager to assure his team, his users and his senior management, that all will be right - if not on the night, at least not long after.

Large doses of contingency planning would seem to be a better form of insurance policy than a hot-line to the stars. Redundant arrangements with a nearby installation does much for the DP manager's peace of mind and drink intake. Knowing that if the alarm bell have to be triggered, then practical help is available given time, space and a little organisation, enables the DP manager to take a view almost with equanimity of matters of disasters, tribulations and misfortunes.

The DPM must never be seen to reflect care and concern, at least in public. While in the privacy of his own office, he may well rave and rant at his secretary, at the system manager, at the field engineering manager and anyone else who happens to cross his data path, outside the sanctuary of his den the DPM must adopt a laid-back, relaxed attitude.

The "altered images" approach is important if the DPM is to keep control of the situation, and the respect of all involved. It may help him keep his job. When the situation does improve, the DPM will be hailed as a wise and capable organiser on whom the organisation can depend.

The responsibility of DP management in the case of a new system, application package or fresh operational input procedures - is distributing considerable doses of confidence and reassurance.

Market forces the issue

PERFORMANCE problems with IBM's 3081 model D mainframe computer do not, as might at first be imagined, reflect technical problems. Rather they stem from the highly competitive market conditions between the giant and its plug compatible rivals.

European users, especially in West Germany, are complaining of performance shortfalls which are due to the fact that the 3081D does not make use of its genuinely advanced processor. It was launched because marketing considerations required a computer to advanced products like the M380H from Hitachi.

The trouble stems from the "dyadic" processor of the 3081 and its restricted input/output facilities on the model D. What is now clear is that the machine announced by IBM in the autumn of 1980 was not the first true H-series machine at all; it was merely an extension of the 303X series using old software and old hardware.

This did not become clear until late last year when IBM announced its 3081 model K processor, which is a genuinely new generation machine.

No doubt the speculation about whether or not the initial 3081 announcement was the first of the H-series provided innocent amusement to IBM's marketing men. It was a classic example of the company manipulating its watchers, not least those of us in the media, by committing the sin of omission. The omission in this case was the failure to make clear the difference between the D and subsequent models.

It is unlikely that those users now discovering that the truth of the matter is to their disadvantage are also amused. In fact, angry 3081D users in West Germany are clubbing together to see what pressure they can bring on IBM.

IBM Germany talks glibly of adapting the computer environment to the level of performance offered by the 3081. How this can be achieved is not immediately clear, since some of the peripherals necessary, notably the high speed, high capacity and much delayed 3380 disc drive, are not yet available.

One thing is clear, though. It is that all the users which ordered and took delivery of their new machines before the 3081K and its operating system Extended Architecture (MVS/XA) was announced now face unexpected software bills if they are to obtain the full performance of their systems.

Essentially all 3081 users need three operating regimes: a version of IBM's big machine operating systems MVS which will allow them to run their existing applications software, and which has been released as MVS/370; the 3081's own MVS/XA operating system; and VM/370, the migration tool which allows the two operating systems to run on the same hardware concurrently.

Buyers of the 3081 model K fully understand that. Unfortunately, initial buyers of the 3081 model D did not.

Buying them off?

GOVERNMENT has performed the seemingly impossible feat of offering a whopping pay increase and still upsetting the unions. It has done so by exempting DP staff at installations like the Inland Revenue, the Department of Health and Social Security and the VAT centre from the guidelines covering this year's Civil Service pay award.

All civil servants are to be restricted to a 5 1/2% maximum increase, and 65,000 can expect no rise at all. Yet DP staff are eligible for additional bonuses which could mean up to 18% more for some of them.

At the back of the collective Whitehall mind there is the belief that DP staff, who were at the forefront of the industrial action in 1981, can be bought off, thus removing the civil service unions' most effective weapon in any future conflict.

Divide and rule is a useful technique if a quick settlement to negotiations is needed. And it may well be that government DP staff will take the money and run, abandoning their clerical colleagues in the process. But it's no way to run a happy Civil Service.

1984 and all that . . .

THIS week's example of the strange things people say about computers was sent in by A. J. Derbyshire of Romsey, Hants, who wins £5.

It takes 30 men working day and night for a year to make as many mistakes as a computer can make in 30 seconds.

Southern Evening Echo

LETTERS

Pascal toothcomb

THE Hull University Prime V-Mode Pascal compiler (HVP) detects eight errors in the example program given in your issue of Pascal errors (CW, February 11) of which six, not five, require attention in order to create a valid program. These errors are, in order of detection:

1. Primary -
2. No semicolon before CONST
3. Improper use of NIL
4. # should be <
5. OUTPUT not specified in program header - occurs twice
6. Leading zero missing from REAL constant

7. Secondary
8. Illegal expression - due to 1, 2 and 3
9. Incompatible parameter - due to 2, 4 and 5

It is well known that errors can be classified as primary and secondary, the latter being detected as a result of confusion following the occurrence of a related primary error. Correction of all primary errors should be sufficient to clear all the secondary errors as well. It is the task of error recovery in compilers to minimise the flagging of secondary errors, and good compilers should distinguish between the two types.

However, it is often difficult to determine which of a group of re-

lated faults is the primary and which are secondary. This is illustrated by your explanation of the fourth error you list, "NIL cannot follow a sign".

Although this statement is true, it is an inaccurate description of the error. A better explanation is that "++" cannot be applied to a character. The error concerning misuse of NIL has already been detected within the CONST declaration and a global change of NIL to NULL will not solve the problem - you have to remove the sign as well.

Also you fail to point out a sixth error which is the first to be found: no semicolon before CONST. For some unspecified reason, a semicolon appears in the "corrected" version, as it should.

Finally, it is incorrect to state that the program "must" contain OUTPUT as a parameter. A perfectly valid Pascal program can be written with no reference to either INPUT or OUTPUT - although it would not be much use without some other communications. These can be represented by any legal identifier given appropriate declarations, with quotation as the first parameter of READ, WRITE, etc.

JOHN D. RAYNBOR
Research assistant
University of Hull.

Cobol discs packed

READERS may be interested in a program that reduces the requirement for disc space and eases security problems for Cobol source files held on ICL 1900 2903/4/5 and 2900 running under DME.

The program, #Coco, is marketed by CHC Software in Reading. It enables any number of Cobol source files to be held in a single library file and at the same time, compact source lines so that use of disc space is reduced by 65%-75%.

Editing programs is performed by #Coco using the same edit commands as the normal compiler. The editing can be "in situ" or file to file. We are a 2904 site that has a heavy program development load and have found the #Coco system to be excellent. It has dramatically increased the speed, ease of editing and maintenance of our Cobol source programs. This is due to #Coco's simplicity of use and its very fast speed of processing.

A. ETHERINGTON

London, SBI.

OS9 not quite complete

I WAS interested to read (CW, February 4) of Microware's OS9 operating system. We have been using this system for several months, and have discovered several problems.

The system should be available in two versions, Level One for 6809 systems with up to 64 Kbytes of memory, and Level Two for larger systems. Level Two is as yet unobtainable.

The excellent interactive word processor, with which this letter was written, is incomplete, in that it is unable to support proportionally spaced printers, even although it is advertised as having this capability. It would appear that Microware has decided that it will no longer support the current version of Stylograph, and customers must wait some unspecified time with a partially functioning version, until it releases the new version.

For the same reason it cannot supply the source for this program. The "Pascal written in-house" as Mr Kaplan puts it, may well be written in-house, but it cannot be obtained either.

In our case these shortcomings are not serious but I feel that Microware, which I see has decided on OS9 for its machines, would be well advised to wait for the finished system to appear and be fully tested.

NATIONAL HEALTH SERVICE PRESCRIPTION PRICING AUTHORITY NORTH OF ENGLAND

PCK Systems supporting approximately 800 GPs are distributed over 100 of the Authority's 11 processing divisions, are required to capture 12 million NHS prescriptions per month. Installation of the first 36 GPs will be by November 1982 and installation of the remainder will be by February 1983.

Detailed Operational Requirements available from: Computing Services Officer, Prescription Pricing Authority, Bridge House, 152 Pilgrim Street, Newcastle upon Tyne NE1 5BN

THEATRE FARCE

A PARTY was booked into the Theatre Moulin in Brussels, which has adopted a computer booking system. Result: 14 were present in the stalls, two in the circle, and two in the grand tier box which was shared with a large Belgian family, and a drunk who thought he had booked for a ballet. There were eight empty seats next to the main group in the stalls.

Chad is off to Brussels tomorrow with his interactive debugging tool.

Ring of innovation for IT82

I WAS fascinated to learn from last week's CW that a telephone with wide-operated dialling is to be one of the Information Technology Year's gifts to mankind.

The thought occurred that the simple addition of a cordless handset to the design would enable me to phone my mum while I'm doing the washing-up. Or with the aid of a cunningly devised combination unit I could phone in my request to Graham Dean while I'm roller skating in the garden with my FM stereo receiver at the hip.

To think that when opposing the end of British Telecom's monopoly Post Office Engineering Union leader Bryan Stanley said he couldn't see that information technology was going to put much extra traffic on the network.

So there's a poke in the eye for those who think British Telecom should devote more effort to making the phones ring on time.

Chad

Get your own back

ARE you the lucky recipient of personalised letters from large publishing corporations? "Dear (your name here, probably misspelled), have you ever wished that out of all the residents in (your street name here), (your town here), you had (this week's special Once-in-a-lifetime offer)? Imagine how envious (your next-door neighbour's who moved out two years ago name here), and (your other next-door neighbour's who died in 1942, name here) will be when they see you (whatever you will be doing in/on/with/to the special offer)."

And so it continues - three or four pages of gushing prose on their latest opus.

But who is to blame for all this rubbish which pours in a relentless stream through your letterbox?

Computers, that's who.

Like to get your own back on the little horrors? Then send me your suggestions and how to do it. The best entries (and probably the worst too) will be entered for our lucky prize draw.

A trivial problem

"THIS case where x=1 and a=0 is trivial, and will not be further discussed here." This is one of the most popular lines in mathematics textbooks - and one of the most humiliating when, as last often happened to me, the case seems far from trivial.

What infuriates us here at Computer Weekly is over-liberal use of words like "trivial", "obviously", and "clearly".

My complaint is simply that these words communicate nothing and lead people into conceptual iron curtains.

This was beautifully illustrated when a number of mathematics PhD students were set a question taken from an 11-plus examination set in 1956. Not one of the students got it right, for the trivial reason that they were told the problem was non-trivial.

What a game!

COMPUTER Weekly's Babemoth 9000 mainframe has come up with a splendid new method for boosting circulation. Hot on the heels of the national dailies' Casino and Bingo competitions, comes CW Roulette.

While the mundane tabled games have only one winner (in theory), CW Roulette guarantees £250,000 weekly, to be shared equally between 50 million winners. This means that each competitor can rely on winning 1/50.

Unfortunately, banks refuse to deal in 1/50s, so we will, regrettably, and emphatically, have to keep the money ourselves.

Chad

Every home should have one

A SHOW house to demonstrate technology that will be available for domestic use by 1987 is being built in Milton Keynes as part of Information Technology Year.

It will incorporate smoke detectors, burglar alarms, humidity controls, personal computers, video cameras and other devices.

There is, however, one application significant for its absence - hot water beds.

I can tell you first-hand that sleeping on a water bed in a cold room is a nightmare.

The reason is that water has a very high specific heat, so the bed shows little response to the half-kilowatt or so of naked flesh in contact with it during the night.

So please, let's have a hot water bed in this new house.

by Philip Hurlin

Spoon-feeding programmers on portable pie in the sky

System portability gets more difficult the more that thought is put into it.

PROGRAM portability is like Einstein's General Theory of Relativity. While many people know something about it, few know exactly what it is.

Certainly portability is no easy matter. For one thing, it creates a dilemma for designers of computer languages — how to offer the most powerful facilities while encouraging programmers to write code that will transfer easily between machines?

Let's have an example: Algol allows the following code: for x:= -2 step 0.1 until 2 do r:= r+1;

In theory this loop should execute 41 times, but on some compilers it will only execute 40 times. This is because real numbers are not held with complete accuracy by compilers. When we expect x to attain the value 2, it might in fact be 2.000000001 and so cause control to pass out of the loop one cycle too soon.

In my rather banal example, one could equally well have written: for x:= -20 step 1 until 20 do But there are cases where using decimal numbers as step parameters makes what is being done clearer.

Basic also allows decimal numbers as loop parameters, but then Basic allows all sorts of odd constructions. Since it is rarely the same from one machine to the next, Basic is only recognised as a language on account of being just about the easiest way of learning to communicate with a computer.

No other serious language allows decimal numbers as loop parameters, and as is shown by my example, their use at once reduces portability almost to nil.

There are three considerations to portability:

1. Computer word size and arithmetic.
2. Operating system.
3. Language.

My example enters the first of these categories, because it has nothing to do with the operating system and would execute on any machine supporting Algol. But it could produce different results on different compilers, and clearly the first prerequisite of portability is that consistent answers should be achieved.

The successful implementation of software relies on the hospitality of the host operating system, and this is completely manufacturer dependent. It is true that there are now attempts to define operating systems and environments, but there will for some time be features peculiar to each manufacturer.

Total portability is just pie in

the sky anyway, and there will always be some work necessary to move programs from one machine to another, even if it's just changing a job control statement.

In the case of languages, the question is: Should portability be thrust down the programmer's throat by eliminating everything non-standard? Or should there be a host of non-standard options available for ephemeral programs which have no hope of seeing daylight on a different machine? I favour the latter approach, if

The first prerequisite is that consistent answers be achieved

The Specialist Event for Specialist Computer Purchasers

Peripherals '82 will feature the very latest in terminals, VDUs, printers, plotters, memory products, graphic displays, tape and disc drives — an exhibition for anyone with purchasing responsibility in the computer peripherals field. This professional exhibition — presented by the **Peripherals Suppliers Association** and Systems International — is the annual opportunity for those requiring computer peripherals to discuss their needs with specialist suppliers.

March 31 — April 2, 1982

10.00 — 17.30 (closing at 16.00 on the last day)

West Centre Hotel, Lillie Road, London SW6

Admission, by business registration, is free of charge. Plan your visit now and save time on arrival by sending for your registration leaflet in advance.

Please send copy/copies of the Peripherals '82 visitor registration leaflet(s) to:

Company
Address

Post to: The Exhibition Manager, Peripherals '82, IPC Exhibitions Ltd, Surrey House, 1 Throwley Way, Sutton, Surrey SM1 4QQ.

Don't just sit there, Do Nothing

THERE is one simple command lacking from all existing computer languages — the command **DO NOTHING**. For the sake of structure something must be done about it.

This request came from a correspondent in New Zealand, who pointed out that most languages have commands that do nothing without admitting to it.

A good structured program should make clear exactly what it is doing, and often the exhorting inert commands lead to ambiguity. Cobol, for example, has the command **EXIT**, which is in fact just a cosmetic nicety. It does nothing at all.

It sounds as if **EXIT** causes control to pass from the current program module into a higher level module. But it only does this when placed at the end of module when control would pass out anyway. Let's face it, the word is confusing.

Cobol has another "do nothing" command: the full stop.

A Cobol programmer wishing to send out an invoice only when there has been a sale to a customer would probably phrase it like this:

IF (there is already sale for this customer) send out an invoice.

Notice the full stop after the word "invoice". It is missing, the command "get next customer" would be executed only if there had been a sale. As it is, it will always be executed.

The full stop is certainly an economical way of saying nothing, but prone, shall we say, to oversight and omission.

Fortran has the closest to a **DO NOTHING**, with its **CONTINUE** statement. But it was not designed for this purpose. The original definition of Fortran had anything but good structure in mind.

No, Fortran's **CONTINUE** was provided to bring a little clarity to tortuous chunks of code by indicating the end of iterative **DO** loops, and also specifying branch points. Because its use is not mandatory, it is doubtful if overall confusion is reduced by its presence.

Structuralists urge that every IF should have an **ELSE** associated with it. It is only logical that it should be possible to write **ELSE NOTHING**.

PUZZLER

IN this moving-counter problem, you are asked to reverse the places of three white discs and three black discs on a seven-square grid, using only 10 moves and taking advantage of the vacant cell in order to manoeuvre. The grid is numbered 1 to 7, to assist the would-be solver.

Each "move" must consist of (a) shifting a disc one square left or right; (b) jumping over a single immediately adjacent disc of either colour to a vacant square beyond; or (c) jumping over two immediately adjacent discs of either or

Finish

both colours to a vacant square beyond. If you like, the discs can be regarded as frogs having certain "leaping capabilities". See page 53 for the 10-move solution.

OP SPOT

'Sparks' shocker takes the biscuit

A NATIONAL biscuit manufacturer has an online terminal in a warehouse which is rented from a national transport undertaking and the installation is regarded with some awe by the local biscuit staff.

Great care is taken to ensure that planned power supply interruptions do not occur in working hours.

But last September a crane owned by the transport undertaking had an unexpected and illuminating meeting with some overboard power lines, and blew one of the phase fuses — though not the one which supplied our innocent little system with nourishment.

Being a complex system with a number of three-phase motors, the volts did not merely die, but

DISASTER

danced around merrily for a nanosecond or two, upsetting the poor terminal.

The manager called in electricians to rectify the fault, and expressed concern that, although the lighting and power were rapidly restored, three vital pieces of equipment were knocked out: the fridge holding milk for the workers' tea, the computer and, most importantly, the PA system.

Luckily, one of the electricians had some experience of amplifier faults, quickly restored the fuses, and began soothing troubled brows with music.

But could the computer be brought back into action? Without it, orders would have to be handwritten and telephoned to head office at great expense.

A check revealed that the processor could be reset, and the modem made operable with a little help over the phone from the BT engineers, but the printer had definitely died despite its fuse protection.

"Not, no computer?" wailed the clerk, visualising a mass of written returns (and it was Friday afternoon).

"Don't panic," interjected the engineer, growing more confident with each device repaired. "Surely you can do the transactions without hard copy, get them printed at head office and posted to you on Monday."

And so it was that all was put back in order — except the fridge which was left DIP (defrosting in peace). And the clerk began clearing the backlog of orders.

On Monday morning, the backlog was still occupying the clerk's full attention, when a further fault in the power supply was found. The electrician was duly summoned and, without so much as a by-your-leave, threw the switch.

Bells, sirens, and the cries of panicking managers filled the air. The electrician quickly threw the switch again, hoping that no one would notice. The clerk was discovered sobbing quietly over his key-board, having just lost the last screenful of orders.

Moral: First, don't let rustic electricians, to whom the difference between 240 and 250 volts is the amount of brightness coming out of the bulbs, and on is the opposite of off, with none of those confusing grey areas in between, loose on vital pieces of equipment.

Second, at least one person at the remote location should know what to do if the system crashes. On this occasion, the site engineer was 160 miles away on a job in Glasgow, and was unable to get to the site until Tuesday.

The BT engineer was also out on another job, and the whole restart operation involved about two hours of telephone calls simply finding out what to do. So get yourself some procedures written.

A 'glaring' case for VDU worker-control

FOLLOWING a recent Op Spot report on the health aspects of working with new technology several people have asked me what can be done about improving conditions. As luck would have it, I have received a pamphlet published by the New York Committee for Occupational Safety and Health (NYCOSH), titled "Health Protection for Operators of VDTs/CRTs."

It contains useful advice for those worried by the effect on them of VDU-based office and computer equipment. In the US, the National Institute for Occupational Safety and Health (NIOSH) has started research which may lead to legislation on manufacturing, maintenance and operation standards for VDUs. But NYCOSH maintains that it is the users of VDUs, the people at greatest risk, who have the most important role in protecting both their jobs and their health.

The problems listed by NYCOSH match those cited in the Alfred Marks survey reported on this page two weeks ago: Soreness, redness, stinging, itching, irritation, and general discomfort of the eyes; pains in the neck and back; dull headaches; seeing blurred or double images; dizziness and nausea; and problems with spectacles or contact lenses.

When the eyes are required to focus on close objects, such as VDU screens, the ciliary muscles must compress the lenses.

Therefore, long periods spent working in this condition will tire the eyes. As a rule, operators should have a 15-minute break

What is needed is willingness on the part of workers to stick up for their right to a healthful workplace

hourly, or 30 minutes every two hours, to rest their eyes by viewing at greater distances. Two hours should be the absolute maximum for uninterrupted work at a VDU.

This kind of control is only necessary where the working environment is already unsuitable.

Glare can also create eye-strain, coming from windows, shiny work surfaces, large expanses of paperwork, and lighting that is either too harsh or incorrectly placed. The reflections of this light on the screen make it difficult to see the characters displayed.

Some of the methods for reducing glare suggested in the NYCOSH publication are the use of blinds or awnings on windows, sensible positioning of machines and light fittings, the use of indirect lighting, the reduction of overall lighting levels without making it difficult to read printed material, possibly giving the workers themselves control.

Some of the other remedies for eliminating glare include the removal of one fluorescent tube where they are installed in pairs (I used this one myself), and pieces of cardboard fixed above the video screen to keep the light off it.

While these home-made solutions can be surprisingly effective, they do not provide a real alternative to curbing the problem at source, by replacing the equipment or improving the environment.

A stunning block often encountered in this area is that of management failing to realise the extent of the problem. An example of this affected me directly while I was working as a shift leader on an ICL 1900.

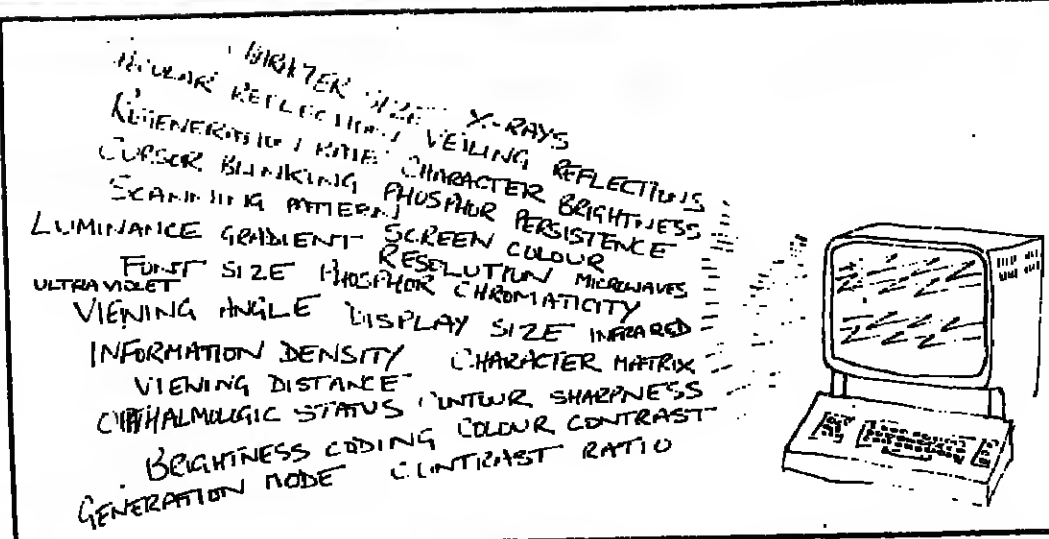

The machine room was too

small to accommodate the hardware upgrade needed to maintain service levels on the online system. So more disc drives were installed, and the operator's console moved in fit them in. ICL 1900s use teletypes as consoles, and these have a transparent perspex cover over the print mechanism.

With the console in its new position, one of the (diffused) overhead lights was reflected directly into the console operators' eyes. If the teletype cover was left open to eliminate the glare, it proved impossible to hear anyone who phoned the machine room to check on progress. The management said that it was impossible to move the console, and did nothing.

The situation continued for another five years until the installation was closed.

If all the operators had protested

as a single body, rather than making the occasional personal complaint, perhaps something would have been done.

Another kind of glare that can cause problems results from the installation of videos with their backs to a window. The background light from the great outdoors is much brighter than the insipid little cathode ray tube, but the pupils of the user's eyes react to the total light entering them, thus making the characters on the screen difficult to see.

Health problems beyond mere eye-strain may be caused by sitting for long periods on poorly designed seats. Varicose veins and even piles can be caused in this

way. Operators should be sure not to sit with the spine curved as a result of badly designed desks and chairs.

The report states, "What is needed is knowledge about equipment design and its health effects, concern on the part of employers, and willingness on the part of workers to stick up for their rights to a healthful workplace and to stick together to get it."

Health Protection for Operators of VDTs/CRTs, The New York Committee for Occupational Safety and Health, \$1 (individuals), \$3 (companies), 32 Union Square, New York, NY 10003.

Big news for everyone selling computer products and services to the Middle East

We've opened up the Gulf!

The arrival of IPC's unique new publication, Middle East Computing, means nothing less than that.

For the very first time, computer users in the rich Gulf States — and throughout the Arab world — have a regular journal reporting on the technology and services available to them, world-wide.

So now you can talk direct — and sell direct — to potential customers throughout this vast, fast-growing market. (A market which imported more than £74,000,000 worth of computer hardware alone in 1980).

How we've done it

Middle East Computing began as a single-issue publication, backing the Gulf Computer Exhibition and Conference at Dubai last December. Its enormous success revealed such an urgent and widespread demand for computer-product information that it will be published regularly from April.

6000 copies will be sent to established computer users or key personnel within government and major business organisations in the Middle East countries predominant in the computer market. The circulation was compiled through the full research resources of Computer Weekly and IPC Business Press backed by contacts made at the Gulf Computer Exhibition.

Starting April, through Middle East Computing, a vast, lucrative, crucially important export market will be thrown wide-open. If ever there was an open-and-shut case for advertising, this is it! Get the full details from...

MD appointed at Pye Telecommunications

PyE Telecommunications has named James Ford, formerly general manager of ITT's data systems division, as its new managing director. He replaces Michael O'Loughlin, who has joined Florida Europe as its European chairman.

Ford's career in the computer industry has spanned 22 years, starting in 1960 at IBM. Six years later he joined Rolls Royce as computer operations manager, eventually taking responsibility for all management services, operational research, computing and systems.

Following a spell as director of marketing support at Honeywell, Ford was appointed managing director of Potter Data Products, the peripheral equipment supplier.

Ford, who holds an honours degree in mathematics from the University of London, takes up his post with Pye at the beginning of next month.

MCA elects chairman

THE Management Consultants Association, MCA, has appointed A. T. Kearney's managing director Philip Banks as its chairman. Banks, who is also a vice-president of A. T. Kearney's parent company, is an economics graduate of London University. He started in management consultancy in 1963 with Norcross and Partners, later acquired by Kearney. His career has included the Army and politics - he stood as a Parliamentary candidate for the Conservative Party in the 1974

General Election. Robin Moore of Atkins Planning has been appointed MCA's vice-chairman. MCA was formed in 1956 and now has 25 member firms.

Richard Champ and Brian Davies have joined Prime Computer as sales executives. Champ will operate in Prime's government district. Davies will work in Prime's special industries group, based at Feltham.

Tony Manning has been appointed field sales director at Semiconductor Specialists (UK). He has been with the company since 1973 serving most recently as national sales manager at the group's headquarters in Chicago, US.

John Goodman, formerly a director of Computer Resale Brokers International has joined Kendal Computer Group as group marketing director. He also becomes managing director at the group's newly-formed subsidiary Kendal Computer Brokers.

Fastest fingers in the West probably belong to Lila Evans (left) of Greenfield, and Dixon Computer Services who, for the second year running, is Rediffusion's Operator of the Year. She clocked up 27,072 net accurate characters per hour at the finals of the UK Data Entry Competition. The score, which won Evans a cheque for £250, was computed after deducting 100 characters for every error. Runner-up, both from Spectrum Computer Services, were Joyce Pool, who came third and received a radio cassette player and Anita Walsen-croft, whose prize for second place was a portable colour television. Prizes were presented by Rediffusion's managing director Michael Aldrich.

More support for PPL

PACKAGE Programs has added support staff and sales executives to the team at its recently-formed subsidiary, PPL-MMS.

Ray Jones, formerly a product manager with Olivetti, has joined as client support manager. Client support consultants are Paul Johnson, formerly with Serck Heat Transfer in Birmingham and Ken MacKenzie, who was previously with Rank Xerox.

Gordon Tebbutt and John Rapson have been appointed sales executives. Tebbutt, who will be responsible for sales in North London and the Northern Home Counties, was previously with

PMSL. Rapson's sales area is the City of London. He has spent the last two years with ICL and BSC Computing.

Joining Peripheral Hardware a managing director is John Hoeth, former national accounts executive with Cable and Wireless. After qualifying as an electronics engineer he worked in Canada for eight years. In 1971 he joined Data 100 as a product support engineer and eventually became manager of the company's support and service operation in Switzerland.

DIARY

MARCH 2
Voice response and other specialist terminal applications. IDPM Birmingham branch. Wheatheaf Hotel, Coventry Road, Sheldon, Birmingham. 7.30.

MARCH 3
Liberalised British telecomm. IDPM Central London branch. Altergo Software, Imperial House, 15-19 Kingsway, London. 6.00. Thinking about the future. IDPM Scottish branch. Edinburgh University Students Association, 60, The Pleasance. 7.30.

MARCH 9
Power station protection systems. IBBT B. SSB. 75 Waterloo Street, Glasgow. 7.00. Liquid heating systems. IBBT. Room SG28, University of Aston, Birmingham. 7.30.

An evening with the robots, talk and demonstration. BCS Coventry branch. Physics lecture theatre, Warwick University, Coventry. 7.30. Disaster recovery. BCS Croydon branch. Maple Room, Fairfield Halls, Croydon. 7.15.

Use of computers in lexicography. BCS Harlow branch. Longmans, Burnt Mill, Harlow. Details.

CONFERENCES

THE University of Birmingham is staging its tenth annual conference on Computer Applications in Archaeology from March 26-27, at the Edgbaston complex. Papers will cover systems for data collection, analysis and retrieval; computer aided publication; graphics and mathematical modelling. There will also be a presentation on 30 years of computer archaeology, by Dr Irwin Scollar of the Rheinisches Landesmuseum in Bonn. Applications to Ms Laffin, CAA82, The Computer Centre, University of Birmingham, Birmingham B15 2TT. Tel: (021) 472 1301. Accommodation is available near the Birmingham campus.

RELATIONAL database pioneers Ted Codd and Chris Date will give a two-day tutorial in London for Pergamon Infotech from March 30-31. Codd will include the Turing lecture, Relational Database: a Practical Foundation for Productivity. Codd is a Fellow of IBM, and inventor of the relational model. Date is author of An Introduction to Database Systems, a copy of which is included in tutorial documentation. Further information is available from Roger Barnes, Maldenhead (0628) 39101, ext 200.

AIMING to help the businessman make the most of the electronic revolution is Micro City, an exhibition of computers, business systems and communications equipment, to be held at the Bristol Exhibition Complex from May 11-13. It is organised by Tomorrow's World Exhibitions, and about 100 companies will take part including IBM, Hewlett-Packard, Data General, Apple, ACT and 3M. The event has official support from Information Technology Minister Kenneth Baker. Further information from the organiser at 9 Park Place, Clifton, Bristol. Tel: Bristol 292156/78.

BOOKS

No need for mystique in buying computers

Managing with Computers. Terry Rowan. Pan Books, 1982. £2.50 (paperback).

THE cheapness, and therefore popularity of microcomputing has brought forth a proliferation of paperback books advising businessmen on how to choose and install a machine.

This book, however, sets itself the more formidable task of advising on how to choose and maintain a minicomputer and mainframes as well as micros, something impossible to cover adequately in some 300 pages.

Terry Rowan, himself a computer consultant, sets about his subject methodically and logically, but with an apparently pessimistic view of the outcome of computer projects, presumably born of personal experience. He seems to have a low opinion of DP staff in general, depicting them in various sections as being scruffy, unproductive and "rewarded excessively" for what they do.

At the managerial level, he dwells on the lack of understanding between the DP department and the rest of the company, and the managerial inabilities of people who have come from a technical background.

Admittedly, this book is not intended to be read by programmers or DP managers, but I cannot see them recommending it as an unbiased source of information. Feminists also will probably be affronted at much of the content: managers are all assumed to be "he" in the real life examples quoted, and the only woman to appear is a character called Nellie from the accounts department.

On the positive side, Rowan's descriptions of the steps to be taken in setting up a computer system are thorough and he gives a realistic picture of what the average company can expect to gain from it. He takes the view that investment in a computer is no different from buying any other expensive piece of equipment, a fact often overlooked by managers.

Despite a wealth of information and advice on computers, the reader is left with an uneasy feeling that once the illusions have been shattered they may not be such a wonderful thing to have after all. Perhaps a more appropriate title for this book might have been Managing Without Computers.

Maggie McLening

Delving into DBMS

Evaluating Data Base Management System, by Judy M. King, Van Nostrand Reinhold, £18.65. 275 pp.

THIS book is divided into three sections. The first deals with fundamental issues. Does a given organisation need a database, and if so, what is needed? The second section then covers the various aspects of DBMS software architecture, while the final part is devoted to a discussion of the role of database in various user environments.

In the opening chapters, the author describes how to evaluate the need for a database and how to choose an appropriate evaluation team. The factors with which this team should aim to be cognisant include the organisation's data (its origin, flow and significance), its present/future application requirements and how the impact of change should be buffered when a move towards DBMS is initiated. Each of these topics is discussed in considerable depth.

The author goes on to delve more deeply into the technical aspects of DBMS. Individual chapters are devoted to physical data organisation, data models, data independence, data integration, data integrity and security.

Each topic is covered in sufficient detail to get the message across without over-burdening the reader with too much technical matter, and the treatment is comprehensive and to the point.

The third part of the book covers a number of subjects that are, collectively, most relevant to DBMS users. Two of the more important aspects are cost/benefit analysis and criteria/methodologies to aid the selection of an appropriate system.

There is an interesting chapter on user interfaces to DBMS and the book concludes with a section that discusses possible future trends: distributed processing, distributed data, hardware assisted and self-defining data.

Philip Barker

Year Book challenged

Computing Marketplace. Edited by BIS/Pedder Associates Ltd. Gower Publishing Co. Ltd. in association with The Computing Services Association. pp 501. £35.

UNTIL recently, the DP industry has had to rub along with only a bare minimum of references and trade books.

The Computer User's Year Book diligently produces an annual comprehensive listing of all computing matters and The International Software Directory, an increasingly valuable guide to ready-made application packages.

Challengers, however, are now emerging, if not exactly thick, at least fast, to plug potential gaps in the installation bookcase.

Dr Adrian Stokes of St Thomas's Hospital has recently produced a diagnostic guide, The Concise Encyclopedia of Computer Technology, which no management report writer can afford to be without. Meanwhile, about to slip into the book lists is a much needed User's Guide to Communications Equipment.

In the meantime, a new publication, Computer Marketplace, has been introduced, backed by such weighty bodies as BIS/Pedder and the CSA.

As the first time reader will quickly discover, the book concentrates on the companies which provide services, rather than the services themselves. As a result,

discovering the local supplier of Apples or Pcs is not as speedy as it would be from a listing of products.

But the publishers have thoughtfully provided instructions on how to use the book which certainly speeds information retrieval.

The directory is divided up into ten major sections, most with accompanying features, covering such areas as bureaux, consultants, training, recruitment, finance and maintenance.

Products and services apart, the book does yield some interesting data. The troubled CAP-CPI Group, for instance, still employs 1,000 people, a total almost equalled by the bustling Data Logic and International.

Similarly strong is Securicor, listed as having 23,000 professional staff involved in computer service group "X". Speedy research establishes that Brand "X" relates to Miscellaneous Computer Related Services - IBM, with its 15,000 UK listing, had better watch out.

Provided the reader can master the basic sort mode needed to get the full benefit from the book, Computer Marketplace certainly deserves its place on the installation reference shelves. It will be of considerable benefit and interest to both established and new entrants to the computer market scene.

Alan Simpson

Speaking Pascal. Kenneth A. Bowen. Hayden Book Company Inc. Rochelle Park, New Jersey. 236 pp.

THE aptness of the title of this beginner's manual can be seen when one examines the section headings and chapter names. The emphasis is on two-way conversation and relevance to everyday problems, examples being chosen from situations easily understood by ordinary people.

No previous knowledge of programming is assumed and new points are introduced slowly to enable the student to assimilate and consolidate his learning.

In Talking to Computers the author introduces the reader to a

simple program and explains the relationship between programmer, computer and I/O devices.

In the section called Simple Conversations, Money Talk shows Pascal being used for calculations using whole numbers and the following chapter covers more complex problems involving real numbers, characters and Boolean variables.

In Controlling the Conversation, Repetitive Conversations deals with both limited and unlimited repetitions, a subject which is taken further in the following chapter, where more involved conditions and multiple alternatives are explored. A study of input,

output and files completes the section.

The Sophisticated Conversations section has chapters on arrays, procedures and functions, and records and there is a final conclusion on methodology, which recommends the top-down approach to programming. There are exercises to test understanding but unfortunately no answers are supplied.

The clear layout of the book together with index and appendices makes this manual easy to use for reference. The headings and illustrations add to the text a humour which in no way detracts from its continuity.

Rosemary Shephard

Love of mathematics makes book compelling

Recursive Functions in Computer Theory. Rozsa Peter. Ellis Horwood, a division of John Wiley & Sons. £17.50.

THOSE interested in the fundamental mathematical theory of computation will find Peter's book gives a compelling and thorough treatment. The application of recursiveness to binary arithmetic, flowcharts and language definition

is covered clearly. Especially interesting for me was a clear exposition, illustrated with a simple example, of how to convert flowcharts into decision tables.

Nevertheless, I cannot avoid the conclusion that the author possesses a deep love of pure mathematics and clearly believes that we all share her algebraic literacy, although a claim is made in the pre-

face that the book assumes no previous knowledge.

While it is true that no complex mathematics is embarked upon, the arguments are frequently based on somewhat confusing rows of symbols, subscripts and superscripts. With a thorough grounding in mathematics, much mental energy would be expended in wading through the many pages

of dazzling mathematical jargon. Which is a pity, because the ideas are always logically developed and it will be a wiser reader who has completed and digested the material of the book.

This well organised, informative volume should find its way into the library of the computer connoisseur.

Philip Hunter

DATA ANALYSIS

Now available as a book £8 post and packing free

... a method of analysing the operation of a business to allow the best computer system design.

A major reason for the development of costly and inflexible computer systems is the failure to describe the business, its data and how it operates. The Data Analysis methodology is a means of understanding what the business does independently of any consideration of the systems which may be used to computerise parts of it, and for analysing its data independently of the applications to which it may be put.

First published as a major series in Computer Weekly, Data Analysis was written by Rosemary Rock-Evans and based on a methodology developed by Ian Palmer. Now reprinted in book form and fully illustrated, it is available from Computer Weekly. Simply complete the coupon below.

ALSO AVAILABLE BASIC FILE DESIGN

A brief and authoritative review of file design, covering sequential, indexed sequential and direct techniques. The book is an aid to the busy DP professional who needs to improve the performance of files. It assumes and builds on elementary principles without becoming a full theoretical text.

Reprinted from a Computer Weekly series written by Owen Hansen, senior lecturer in systems analysis, business systems analysis team, City University.

price £1.90 including postage and packing.

Bringing computers to life

THE Computer Fair

Personal computers
Home computing
Small business systems

In all walks of life, personal computers have revolutionised computer power - bringing it within the reach of a far wider and more popular market than ever before.

In 1982 this revolution will explode onto the home and personal computer market. To meet this demand, Practical Computing and Your Computer announce a brand new event - The Computer Fair. The promotion of the exhibition will be heavily geared to attract the growing market of potential and existing users of personal computers, from home computer enthusiasts to businessmen.

Bring your computers and services to life - all weeks of life - at The Computer Fair!

Complete and return the coupon - we'll send you details.

SOFTWARE

MONTH

Claire Gooding identifies the demand for greater productivity as the driving force behind software development

The current that is taking the industry to maturity

ANYONE in the software business — and quite a few outside it — recognises that developments in software cannot be summed up in a few pages.

However, one theme has emerged strongly: the need for increased productivity.

Programmers and big DP departments being such an introverted lot in general, this is usually taken to mean programmer productivity — getting more code per programmer, more oomph per program.

This is all very well, and the trend towards buying packages rather than tailored systems, writing re-usable modules, and using program-writing aids is all that it should be.

But beneath the issues that have hit the headlines there has been a slower, stronger current taking the software industry towards maturity. The advent of

the microcomputer as everyone's tool has meant that there is a new, more demanding race of user whose presumption that software can (a) do almost any job, and (b) can do it properly, has begun to rub off on the more doleful end-users of yesterday.

End users who would once put up with a six-month queue to get their application written now expect to be given other means — a terminal on the desk, high level query language, or a report writer.

DP departments have tended to forget that they are not an end in themselves, and the habit of many is to dissociate themselves from the actual product of their company, be it biscuits or motor engines.

So the power of computers, which could do so much to improve the way biscuits and motor engines are produced, has been directed mostly towards the non-profit-making parts of companies, mainly the accounting, stocktaking, and "housekeeping".

Consequently the hands-on revolution has surfaced in microcomputing, leading to UDI departmental decisions, and a whole new range of home-grown applications written with the attitude that they must be easy to use. The same ideals have now taken a firm hold in the main-frame market.

This trend towards easy-to-use tools means that everyone has the chance to get in on the computer act, be it financial modelling or sorting out dental records.

The end user now has direct access to computer power.

Computer power is on the move — to the end user

OVER the past decade there has been an almost continuous wall from data processing departments about their inability to recruit enough skilled staff to develop new systems and maintain old ones.

Of late, that chorus has been more muted, partly because of the harsh economic climate. But the start of a fundamental shift in responsibility for data processing from the central department to the end user should also be taken into account.

Last year, some £45 million worth of personal computer hardware was sold in this country, the vast majority to those white collar workers who would in the past have depended on experts to do their computing.

The process of distributing computer power has taken place because the economics of silicon engineering have been reducing hardware prices at a steady 25% a year, and because only when computing power can be put into the hands of the end user can real gains in productivity take place.

Management Information Systems were one of the outstanding failures of the early Seventies. The idea was fine: give the end user — that is the manager — all the reports, analyses and statistics that he needs and he cannot help but become more effective, more productive. In practice it did not work. Trolley loads of indecipherable computer print-out gathered dust in the corners of offices.

What had gone wrong was that the data processing department was in charge. It was the computer experts who told the manager what he could have, and not knowing any better he went along with them. Now with cleaner hardware and the end user at the console we are going to have another stab at it.

New software requirement

range from planning a factory to launching a new project.

Financial planning systems, particularly when applied to the budgeting process, are another example of the new type of management information system. Setting budgets by hand for an operation of any size normally only leaves time for about one-and-a-half attempts at getting it right. Computerised planning can increase the number of trial budgets to five.

Operating a financial planning system usually involves specifying some logic, for example that price times sales equals turnover, and inputting base data that is multiplied to fill a matrix plotting variables against time.

The great advantage of computerised financial planning is that elements of the model can be changed and the entire budget re-computed. The so-called "What If" questioning.

Financial planning systems allow organisations to hone their budgets through a process of interaction between the managers actually responsible for achieving the targets, and those at the top who have wider objectives.

Originally not much more than expensive time sharing products, financial planning systems are now

programmer which will produce sub-routines, handle data from five files at a time, and according to its UK distributor Pearl International (UK), does not require any knowledge of the C-Basic or M-Basic languages in which it codes.

"No code appears on the screen," says Pearl's director Tony Frowd. "All the user has to do is learn how to become a systems analyst."

Pearl International, an offshoot of a dentistry practice run by computer buff Chris Hibbert, claims that a sales ledger to handle dealer invoicing, return of products, analysis of which dealer sold what and pro forma invoices took about two and a half hours to put together using Personal Programmer.

When Personal Programmer is launched in the UK in April, Pearl International expects it to appeal to the end user rather than the systems house looking to improve on programming time.

One of the key technologies in bringing computer power into the hands of users, particularly in large-scale service operations, will be viewdata. Although Prestel has been slow in getting off the ground, British Telecom has shown the computer industry how to put £700 terminals on someone's desk and allow that terminal to communicate simply with a central host.

Prestel's problems, basically its lack of appeal to the domestic user, spring from the original concept of the technology as a means of dish-ing out information that people had previously got from books, guides and brochures. More alert business men have grasped that viewdata is best used for transactional processing.

That is why BL, which plans to equip 1,700 dealers with Philips' terminals by the end of the year, is expanding viewdata to allow dealers both to inspect stock records so that they can trace the whereabouts of particular models, and to deal directly with the company. They will be able to place orders over the system.

Viewdata makes it possible for a car dealer wishing to arrange hire purchase for a customer to key in the customer's particulars, get credit clearance and a hard copy of the information.

The thrust of viewdata software has been to make the end user's task more easy. Some systems re-format data from ordinary computer files on the fly, turning a conventional database into a viewdata look-alike.

GEC has a widget called Selective Field Update on its bureau service, which automatically moves the cursor to the appropriate place on the screen for the user to make an entry. Security locks and improved methods of searching a viewdata database —

DIAGAPYPERF... Expert systems can be applied in the commercial world.

BL's Stock Locator in use at a distributor's showroom allows dealers to place orders over the system.

Many of a so-called domain engineer) and the interpretation of those rules by the system, for the benefit of another expert user.

Alex d'Agapeyeff, chairman of the British Computer Society's expert systems committee, is convinced that expert systems can be applied in the commercial world. He believes that the systems could be harnessed to the task of updating accounts ledgers in line with legislation or changing company practices.

"There is a danger," he said, "that expert systems will be seen as only useful for profound things. They could be applied to making a universal product. There are a large number of file processing products, all are different. Accounts files could be made more like ledgers. Some of the side-effects of artificial intelligence do ring a lot of bells on where software is already going."

The management information system of the future may well include the expertise of past managers, immortalised in the rules applied by an expert system, improving the "quality and timeliness of management decisions".

We'll chip in on high technology.

Real time industry gets the message

by Claire Gnodding
REAL time software has been one of the most neglected areas of computing, fated to rest in the hands of a small circle, partly because the commercial world is so keen on general ledger and the like that it has not woken up to the potential in real time applications.

In this field quality, reliability, and the "man-machine" interface which gives users the ultimate control, are more essential than in any other — because the user can be in charge of a nuclear power station or a moving ship, for example.

The real time industry faces productivity problems as well, because the skills to which it turns its skills are varied and highly specialised.

A recent report from the National Economic Development Office criticised the lack of co-operation in the British real time software industry.

Given more high-level tools, which would prevent the re-inven-

tion of the wheel on every project, the industry would be far more efficient.

There are now signs that the message has been taken to heart. Systems houses such as SPL and CAP are putting their heads together over real time projects, particularly with the US Department of Defence's new language Ada.

The most positive move towards making real time systems more productive and less labour-intensive has come from Dynamic Software Services, the Hawker-Siddeley subsidiary.

For some time the company has been seeking to use and supply "re-usable" modules of real time software as part of its service.

This technique cuts down on the amount of code for applications like graphics, which have often needed some particular slant for a specific project.

It also allows DSS to spend more time making its software easy to use for end users, who might be anything from sailors to mining

BANCROFT... concentrating on the man-machine interface.

engineers. "We think it's important to concentrate on the man-machine interface," said DSS Divisional Manager John Bancroft.

"The packaged approach makes as much sense in this business as it does in conventional DP, and the trend towards giving power to end users is just the same."

The micro spectre — ushered in with a modest whimper

A SPECTRE is haunting today's DP manager: the spectre of microcomputers.

It is clear that micros will be used in a big way to perform tasks traditionally serviced by multi-million pound mainframes — and equally clear that at the moment this is all talk and little is actually being done.

How is it, then, that micros will be ushered into the DP world? The contention of this piece is that they will make their entry with the

SOFTSELL

modest whimper of dumb terminal emulation rather than the glamorous bang of a sophisticated local area network, with \$300 software packages the cause of it all.

In regard to micros, there are

powerful and coherent reasons for DP conservatism. Although the hardware is often sufficiently powerful, the software available usually isn't, and timely support is generally non-existent.

However, reflection on what is happening today suggests that ordinary DP departments will have micros forced upon them whether they like it or not: independently of whether they feel they understand the technology or are ready to use it.

For the average DP department to expose micros, two things must first take place. Initially, knowledge of what they do and how they work has to become available within the DP department itself. DPs need to feel familiar with micros, in other words.

Secondly, a track record of successful micro implementations needs to be established by pioneering DP departments, from whose experience the DP world in general can benefit without running unacceptably high business risks.

How will all this take place? To answer it is necessary to understand how personal computers are being used today in corporations.

Corporate non-DP staff are buying personal computers for a small number of simple, standalone applications. In particular, middle managers are buying micros because they want to run electronic spread sheet programs such as Visicalc, or word processing programs such as Wordstar.

The most frequent users of the former are marketing and financial staff, for sales and financial projections and reports.

Word processing is used in a variety of departments, and the primary justification typically lies in the development of documents over a period, or for personalised mass-mailings.

In short, corporate staff are buying micros because they want to run a single, specific program costing a few hundred pounds.

The cost justification of the hardware/software combination is usually easy, and since the expenditure generally falls within the

Ferris is a consultant in the UK and US providing marketing and planning advice to computer users, particularly in the area of software.

manager's discretionary budget, there is no difficulty in purchasing from a local personal computer retailer.

Clearly, at this stage DP participation is not necessary, and system acquisition and implementation normally takes place entirely without their involvement.

Once the system has been in operation for some time, two things tend to happen which will, believe, be the main causes of acceptance of micros by DP staff. First, personal computer users want to use their machines as dumb terminals; and second, they ask for programming help.

The Dumb Terminal Syndrome. One of the first things that corporate users of personal computers want to do is to access the corporate database, and the portfolio of applications programs that have been developed over the years by DP staff.

For example, a bank vice-president who has been using Visicalc to predict his next year's loan business will find, once he has become familiar with his system's capabilities, that he would like to be able to access actual client records to test various hunches and hypotheses. Currently, if he wants to do this he probably has to go to some distant, crowded room where there are various mainframe terminals.

So the personal computer user turns to his DP department, and asks to be able to connect his machine directly to the mainframe. This is where DP department have to get involved.

Most micros are quite capable of emulating common terminals, such as the IBM 3270, or simple

Micros in the DP world

asynchronous TTYs, and supporting packages are readily available. DP has to install the emulation software in the micro, and at the mainframe end it has to assign log on privileges and define the TTY environment (such as available programs and menus, data access, and so on).

Physical connection must also take place, whether by dial-up modems, leased lines, or direct wiring.

True, often DP departments will be able to resist such user demands, often with valid excuses. However, the facts are that this very simple form of networking presents no real technical problems, and DPs claiming that it does are seriously endangering their credibility. Further, word will get around that it can be done, and sometimes senior management will make the requests; these users cannot be turned away so easily.

One way and another, a lot of non-DP personal computer users are going to have their systems connected as dumb terminals to the corporate mainframe, and DP is going to have to do the work.

The Lend-Me-A-Programmer

Syndrome. The other main cause of micro acceptance among DP staff will come, I believe, from requests for programming assistance. Again, senior managers using personal computers are key: they will have a strong tendency to

A lot of personal computer users will want their systems connected to the corporate mainframe, and DP will have to do the work

ask DP to "lend me a programmer for a few days" to implement some extra facility. When the request comes from senior management, it will often be impractical not to respond.

Some of the features implemented in this way will not have any bearing on the general DP en-

vironment — for example, if the personal computer user wants to know how to make one of his standalone packages do some statistical analysis, or how to change a report heading. But some of the requests will provide the drive for more sophisticated forms of micro networking over and above the dumb terminal working.

For example, users will want to download corporate data for later use locally in spread sheet analysis, or to save having to enter customer names and address for a mass-mailing. Gradually, user requests will encourage increasingly knowledgeable and confident DPs to take advantage of the new technology in more and more sophisticated ways.

Thus the news for the DP world appears to be both good and bad.

The bad news is that insistent users are going to thrust new, unproven technology upon them whether they like it or not.

The good news is that the change is likely to be evolutionary rather than revolutionary, starting with simple terminal emulation rather than unfamiliar and relatively complex local area networks.

David Ferris More non-DP staff are using personal computers to run specific programs.

ROUND UP

RECENT events in the software industry you may have missed:

■ The real time software industry, one of the areas in which Britain likes to think highly of itself, was given a warning that it should pull itself together in a critical report from the National Economic Development Office. The report found fault with the "enormous fragmentation of effort" in the UK real time industry, and recommended strict adherence to standards and the development of reusable high-level software tools.

■ Microcomputer giant Commodore Business Machines plans to release a machine which will run existing software and applications originally written for other machines. The plug-in circuitry will be supported by the new Commodore 64, which, priced at \$1,000, could trigger off a price war as hardware profitability is trimmed further back to compete.

■ The much-discussed programmer shortage seems to be easing, with a report from Reward Regional Surveys confirming the trend. The report indicates that pay increases for programmers

have dropped from 6% to 2% over the last six months, with similar, though not so sharp, reductions in salaries for analysts.

■ Software products house Micro Focus launched two debugging tools which will allow users to see their Cobol programs, new and old, come to life before their eyes. The Animator and Slideshow both concentrate on the interactive aspect of Micro Focus' Compact Interactive Standard CIS Cobol compiler. Slideshow allows users to create end user interfaces such as graphs and menus from existing or new applications, and Animator is a "live" trace debugger which follows the code down the screen as it executes.

■ IBM users had the chance to save on present maintenance costs by 25% when IBM changed the way it licenses its software products. The change means that most large users with multiple sites will be able to centralise, getting one copy of updates and distributing it within the organisation, rather than duplicating effort and costs by having changes implemented by IBM at every site.

SOFTWARE MONTH

COMPUTER WEEKLY'S SOFTWARE SUPPLEMENT

Computer Weekly was the first general computer journal to give software its own space when Software File was introduced for weekly news reports. Now the time has come to expand the coverage further.

Edited by our Software Editor Claire Gnodding, Software Month will devote its whole coverage to one subject each month. The topics are listed below.

But included each month will be a news round-up, highlighting important events of the past month, and a column by consultant David Ferris on the increasingly important business side of software and the companies which market it.

PROGRAMME FOR 1982

- February 26: Annual software review
- March 18: Networking software
- April 22: Database
- May 12: Financial and project planning
- June 10: DEC systems
- July 16: Payroll packages
- August 12: Integrated Office software
- September 8: Program productivity — program generators and high-level languages
- October 7: Word processing
- November 4: City software
- December 2: CAD/CAM and scientific software

For advertising within Software Month contact Gordon Bradley, 01-461 3126.

Most personal computers will emulate commonly used terminals to provide access to the corporate database.

Word and data processor combined

A COMBINED word processor and data processing system is now available from Hull-based Alvernic Computer Systems.

The system is based on the DEC PDP-8 commercial minicomputer and can provide word processor functions and sales/purchase/invoice ledger, invoicing/stock control and payroll programs.

It costs from £9,300 including a letter-quality printer, 20 diskettes and 12 months' maintenance. A comparable DEC word processor system would cost about £7,000 with no data processing capability and with installation and maintenance at additional cost, says Alvernic.

For smaller firms, the significant computing power contained in many of today's word processing systems will never be fully stretched, wasting both money and a potentially useful tool. By combining the functions of word processor and data processing

Alvernic's DECmate 278, a combined word and data processing system.

system on the same intelligent hardware, a much more cost-effective solution becomes available, according to the company.

About 100 systems have already been installed by Alvernic.

A variety of system configurations are available, all based on DEC word processor packages. The Alvernic DECmate 278 com-

mercial system is a text processing device using a menu-driven editor to create and update documents stored on floppy diskette.

Up to 200 documents of various lengths or up to 125 pages (at about 2,000 characters per page) can be stored on a single floppy diskette. Simultaneous editing and printing capabilities allow a user to

prepare and edit reports through several drafts.

For larger or more demanding applications, Alvernic can supply the DEC type-300 system, layered on the DEC CTS-300 operating system.

Alvernic Computer Systems (CW), Ryde Avenue, Hull, North Humberside. Tel: (0482) 445461.

Hytec adds to ICL compatible range

OXFORD-based Hytec Microsystems has introduced two more products in its range of ICL compatible systems - the H5000 hard disc subsystem and the Hytec CO3 communications protocol.

Both are designed to upgrade the capabilities of the existing product range.

The H5000 is for use with Hytec's H4000 or H4500 terminals. Both terminals are used with ICL mainframes as interactive workstations and can operate as standalone units. The H5000 is CPM compatible and contains up to 20 Mbytes of storage.

The H5000 functions as a local data collection device for use with either of the two terminals when being used as standalone units, or a remote data collection device when either terminal is used as an interactive workstation with the mainframe.

The bus interface provides 200,000 characters per second data

transfer, offering a transfer rate 20 times faster than that achieved when using floppy discs, says Hytec. This enables the H5000 to be shared by up to four H4000/H4500s or a mixture of the two disc units can be shared by up to 16 terminals to provide extended online storage.

The Hytec CO3 - or full extended basic mode - can function in exactly the same way as the ICL counterpart, claims Hytec. The three most widely used communications protocols are in basic mode (CO1), extended basic mode (CO2) and full extended basic mode (CO3).

Although the Hytec CO3 Communications Protocol has the same capabilities as its ICL counterpart, its advantages in terms of price and flexibility lie with its use on one of the Hytec terminals.

Hytec Microsystems (CW), West Way, Oxford OX2 0JX. Tel: (0865) 726445.

Analogic extends its array processors

FOLLOWING the launch of the AP400 and AP490 array processors, Analogic has introduced two new data acquisition modules to extend the processors' scope.

The ADC410-02 and 06 provide interfaces to a range of analogue transducers. They are independent of the host computer and relieve the host of acquisition tasks, allowing it to perform other operations while the data is being gathered. Applications include spectrum analysis, audio and sonar signal processing, seismic and vibration signal processing and in various telecommunications contexts.

The 02 module multiplexes up to eight differential input channels. The signal is sampled at up to 115 kHz and converted to 12-bit digital form.

Channel selection and sampling

rate are controlled by software: the processors themselves. A ramp test signal is provided which enables the diagnostic programs - supplied with the unit - to check the module independently of the sensor equipment.

The 06 module can sample two channels simultaneously at up to 50 kHz per channel and convert each channel to digital form with resolution of 16 bits. The interface to the processor and the control channel selection and sampling rate are exactly the same as with the 02 module. A ramp test signal is also provided, as are the necessary diagnostic programs.

Both modules are mounted in 19-inch racks with self-contained power supplies.

Analogic (CW), The Centre, 48 High Street, Weybridge, Surrey.

Multitwriter IV daisywheel printing terminal

Printer with WP functions

A 50cps daisywheel printing terminal, the Multitwriter IV, which combines printing with word processing functions is available from Teleprinter Equipment.

Proportional spacing, centering, right margin justification, bold printing, shadow printing, underlining and page titles are among its word processing functions.

As well as taking some of the load off the CPU, many of these "terminal programmable" features can be switched on and off by the

operator without affecting any CPU software embedded commands says Teleprinter Equipment.

The keyboard features a standard qwerty layout and numeric keypad. A series of LEDs located along the top of the keyboard indicates the terminal's status.

The unit is supplied with a serial RS232C interface.

Teleprinter Equipment (CW), Akeman Street, Tring, Herts HP23 6AJ. Tel: (04428) 55519.

ABS minis are 50% smaller

THE MX Series, ABS Computers' commercial minicomputer range, has been repackaged to allow for a 50% reduction in space.

The MX Series is a commercial system, designed primarily for business applications, and with the cost of office space at a premium in the major conglomerates, the reduction in physical size is seen to

be an advantage by ABS. The machine will take up less space than a typical desk and so can fit unobtrusively in a corner of the office.

The reduction in size is pertinent throughout the MX Series. ABS Computers (CW), Multibus House, Station Approach, Woking, Surrey.

COMPEC NORTH'82

BELLE VUE, MANCHESTER JUNE 22-24, 1982

The exhibition

Compec North was launched in 1981 to serve the computer requirements of end users, the OEM market and other computer companies in the North of England. The exhibition was outstandingly successful, filling the industry's need for a well-organised end well-promoted computer show in that part of the country.

The market

Compec North attracted 4,271 top quality visitors - from an impressive range of organisations, including: Banking, finance and insurance; telecommunications, electronics and engineering; construction, metallurgy and chemicals; printing, research and large retail groups; large manufacturing companies, the major nationalised industries, national and local government establishments; police and the armed forces.

The success

Compec North's combination of content, location and visitor profile guaranteed a hugely successful exhibition for all concerned - strongly confirmed by just some of the exhibitors' comments:

"Provides business for a long time ahead"
Ithaca Intersystems (UK) Ltd

"All the visitors seemed to be real prospects and came from a good geographical spread"
Case (Computer and Systems) Engineering Ltd

"Well organised, valuable and about time there was a show in the North"

Mini Sales -Kuwait based

**to £10,000 basic
accommodation + car**

Our client is a major distributor in the Middle East for an impressive range of software packages, services, communications and the remarkable Tandem Non-Stop Transmission processing unit.

To complement the Tandem sales force they are seeking to recruit a number of young, dynamic systems salesmen to take full advantage of their growth rate and standing within the market.

The successful candidates will have a proven track record within min/mainframe sales and the ability to communicate at the highest level. Previous experience in selling overseas would be an advantage but is not essential.

Ring Paul Pearce on 01-353 8411 (24 hours) or 0432-57483 (weekends).

Customer Service Engineers Computer Graphics £7,500 - £10,000 plus bonus, plus car

Our Client is a subsidiary of one of Holland's largest Public Companies, marketing and supporting a range of high and medium resolution Graphics systems, such as Genisco and Vector General.

In pursuit of a policy of vigorous expansion, a UK operation has recently been established with its Head Office located in a pleasant Northamptonshire market town. It is likely that Customer Service Engineers will work from home in most cases, although relocation assistance is available where necessary.

In order to support a broad customer base, our Client now requires two additional Customer Service Engineers to support and service a wide range of Computer Graphics systems.

The ideal Candidates will have a good electronics background and a number of years experience of working to component level on Graphics systems. Previous experience of interfacing with DEC hardware and a mix of both analogue and digital experience would be advantageous.

In addition to an attractive starting salary, other benefits will include full use of a Volkswagen Passat Estate car, free BUPA and a contributory pension scheme including free life assurance.

If you can offer sound experience in fault finding on Computer Graphics systems and enjoy working in a professional environment, contact Ian Payne on 021-236 3781 (24 hour answering service) or alternatively write to him at the Birmingham address.

Initial interviews will be carried out at your nearest SCR regional office during early March.

myriad

pipeline to success for systems analysts

North London

£9,000-£10,000

An exciting but demanding opportunity exists within a rapidly expanding multinational company, with substantial interests in providing facilities for the oil and gas industries.

Applicants should be keen to join a dynamic environment that offers the opportunity to develop a wide variety of systems. Main responsibilities will include: constant liaison with Senior Management, the design and development of new systems and the co-ordination of system implementation. Applicants must be prepared to travel to customer sites in the U.K. to conduct feasibility studies and subsequently implement systems at a later date.

... Inception to implementation

Good communicative skills and the ability to operate effectively in a small team are essential together with at least two years' analysis experience, a programming background is desirable although not necessary.

In return, our client can offer an excellent starting salary together with good company benefits and for further information please contact our London office on 01-353 0981 quoting reference C1/2502.

Commercial Systems Professionals

Discover the challenge of developing advanced business systems for one of the world's most successful organisations

As a respected leader in the international oil industry, Esso is without doubt one of the world's most successful commercial organisations. We are determined to maintain our outstanding record of success and to do this we must achieve the very highest levels of efficiency in all areas of our operation.

Within Esso, we are committed to an aggressive and exciting programme of rationalisation and investment — our 1982 investment budget is over £800 million. Against this background,

we are expanding our London based systems team by appointing a number of talented and career minded systems professionals.

In order to maintain our standards we are only looking for effective men and women who are educated to degree standard.

The Senior Analyst Programmers and Analyst Programmers we seek must have a sound IBM background with either COBOL or PL/I plus at least one of: Mark IV, APL or ADF and experience of either MVS, TSO/SPF or IMS DB/DC. Project Leaders must

be able to demonstrate, additionally, good management skills and a record of successful implementation of major projects. You must be an ambitious self-starter, under 32, able to communicate at all levels and take decisions. Determined and enthusiastic, you will be the kind of person who is committed to progressing to the highest levels of business management. The rewards of joining Esso are excellent. We offer highly attractive salaries which are reviewed regularly. In addition, you will enjoy a full range of valuable fringe benefits, and of course, considerable scope for rapid career progression within our diverse organisation. Relocation expenses will be met where appropriate.

So if you are a talented commercial systems professional, bring your experience and your ambitions to Esso. Come and talk to us over a bite to eat and a drink at any one of our open evenings in London.

CALL IN FOR AN INFORMAL DISCUSSION

A team of Esso Managers will be at:

THE ROYAL WESTMINSTER HOTEL
(49 Buckingham Palace Road, Victoria)
on Monday 1st and Tuesday 2nd March
between 5 p.m. - 9 p.m.

THE TOWER HOTEL
(St. Katharine's Way, Nr. Tower Bridge)
on Wednesday 3rd and Thursday 4th March
between 5 p.m. - 9 p.m.

THE HOTEL INTERCONTINENTAL
(1 Hamilton Place, Hyde Park Corner)
on Tuesday 9th March
between 5 p.m. - 9 p.m.

Alternatively telephone us on 01-245 3208 today Thursday 25th February between 9 a.m. and 7.30 p.m., or from tomorrow during normal office hours. If you prefer, write with full details

to Ronnie Johnston, Esso Petroleum Company Limited, Esso House, Victoria Street, London SW1.

IBM/GSD RPG Modelling

London to £10K + car
Experienced System 34 or 38 RPG programmers are required to join a highly successful company marketing a management information and financial modelling package. Marketing oriented people will be particularly suited to these positions as they will be expected to function in a support role with the opportunity to develop client contact skills. Contact Tim Bridges

International Support

Berks. £12K to £14K
An international company with its European support centre in Berkshire has a small team of specialists who are responsible for supporting agents and distributors outside the U.S.A. An additional team member who is experienced in telecommunications software and networking is required to join the team. Attractive micro based product in business and office systems. Contact Terry Harvey

British Bank

C. London c. £8,000
A major British bank with its computer centre in London seeks a bright programmer to join the application development team. 2 or 3 years experience of Assembler programming on a large IBM mainframe is required. Fringe benefits normally associated with a banking organisation can be expected along with a salary review in April. Contact Tim Bridges

Comms. Software

Herts. £8K to £12K
Our client is a world leader in this exciting growth area. Continued expansion of the software group has created vacancies in several teams. You should have sound mini or micro systems programming experience using CORAL, Pascal, Fortran and Assembler gained in O.S. compilers, utilities etc., or real time micro applications experience. Contact Terry Harvey

HONEYWELL Level 6

London to £9,500
A market leader and household name in the motor industry has two exciting openings for their data processing team in SW3. An analyst programmer with 4 years i.p. experience including 2 years in systems analysis and a programmer with 2 years COBOL experience are required. Both posts require a thorough knowledge of Honeywell Level 6 mini-computers. Contact Tim Bridges

Comms. DEC/IBM

Berks. to £14,000
This could be the last job move you ever wish to make. Our client is seeking bright, experienced software engineers. Preferred experience is DEC/RSL, VAX, IBM binary synchronous comms., protocols and X.25 packet switching. If you come close to this and have the right attitude, unlimited long term career opportunities are yours. Contact Terry Harvey

Commercial Comms.

London/S. Coast £8K-£11K
This highly successful company has several vacancies for programmers and analysts to work at their Level 66/DPS 8 installation. Candidates should be thoroughly conversant with DM IV and COBOL. Attractive salaries and surroundings along with career progression are offered in return for hard work. Analysis with advertising/marketing background are of particular interest to our client. Contact Tim Bridges

DEC Scientific

Beds. £8K to £11K
The working environment, the company and its products all rate A.1. with this client. Experienced RSL/Macrol programmers will enjoy working in applications and systems for computer controlled analysis and measuring instruments. There are opportunities in special systems and standard product development. A physics degree would be useful. Some international travel. Contact Terry Harvey

Travel Industry

N. Surrey £8K-£10K
A well known travel company is embarking on the development of a new advanced travel booking and accounting system based on IBM S/38. One senior analyst/programmer and two programmers are required to join a small team working on this exciting project. A thorough knowledge of RPG is required. Experience of System 38 is preferable rather than essential. Contact Tim Bridges

UNIX Pascal, 'C'

C. London to £12,000
A company engaged in the development of intelligent interactive graphics plus a range of video related products wishes to recruit several systems specialists. Candidates with UNIX, Pascal, or language 'C' are of special interest. People with DEC/RSL; RTL/2, CORAL, or Intel 8085/86, Z80 and assembler, could also extend their skills with this client. Contact Terry Harvey

Write, or telephone us during office hours as below.
Any other time call Terry Harvey on: Great Missenden (02406) 4705, Tim Bridges on: The Lee (024 020) 502.
We are always ready to discuss these and many other interesting positions.

AN ILLUSTRATED GUIDE TO D.P. IN WILTSHIRE

Wiltshire is well known for its beauty — rolling countryside, picturesque villages, timeless old market towns.

Imagine a balmy summer's day, wandering down a quiet country lane to the banks of the historic River Avon, to enjoy a relaxing afternoon.

The historic river Avon.

Or a visit to Castle Combe, one of the most beautiful villages in England, just to appreciate its quaint charm.

A better quality of living, but one which can be all too easily lost in an effort to be at the forefront of technological development, at any cost.

The perfect compromise arrives in Chippenham in June of this year, when the highly successful Wavin Plastics Limited arrive at their brand new offices at the foot of the Cotswolds.

England's prettiest village — Castle Combe.

You, too, could relocate with them, and try a better style of living.

But what of the business challenges that you need, the technology at your fingertips, the professional CHALLENGE?

The White Horse, Wiltshire.

Wavin Plastics are already highly successful exponents of DP technology — with a 4Mb IBM 4341, IBM 5280s, micros and the company fully committed to the development of office automation.

Software? VM, DOS/VSE, DLI, CICS, VOLLIE, VSAM, with programming in COBOL and RPGII.

The business challenges come from the extensive range of systems, both existing and planned, across the manufacturing, marketing and distribution sides of the company, as well as the development of integrated office systems.

As a result of the move of Wavin's headquarters in June, they need to recruit people now, for the following positions (experience sought in brackets):

SENIOR SYSTEMS PROGRAMMER — to £11,750 plus CAR (CICS/DLI, IBM DOS Assembler)
SYSTEMS PROGRAMMERS — to £10,000 (IBM DOS ASSEMBLER)
SENIOR PROGRAMMERS — to £10,000 (IBM; CICS/DLI, COBOL, RPG or Assembler)
APPLICATIONS PROGRAMMERS to £8,790 (IBM; COBOL or RPG)

The new offices of Wavin Plastics Ltd, Chippenham.

We will also be looking for Operations staff.

If you are potentially interested in any of the above positions, you will obviously want to learn more — to learn about the jobs in detail, and what it would be like working for Wavin Plastics Limited; to find out about living in one of the most beautiful and accessible areas in the country.

The space here would not do the information justice. Ring immediately, or post the coupon, and you will receive by return all that you would reasonably want to know. Act immediately. You owe it to yourself.

Please send an Application form and Company Profile to:

SOFTWARE SPECIALISTS

Back in 1957, the Digital story began as a three man and one logic module
operation. Today, in our 25th year, we have grown rapidly to lead the world in
the design, manufacture and marketing of interactive computer systems.
We are still enjoying tremendous growth in all areas of our worldwide
organisation — and the software side of our UK operation is no exception.
That's why we're now looking for at least four talented Software Specialists to
join us in either Bristol or Basingstoke.

EXCITING CAREER AREAS IN...

For both locations, the common responsibility will be to provide a high level of
software support to both new and existing customers. To be more specific, we
need Software Specialists to join us in Basingstoke and Bristol to work in
tandem with our sales team advising on the suitability of DEC products and
assisting in demonstrations and presentations. Software Specialists are also
required at both locations to provide installation and post-sales support; and
again in Basingstoke, another Software Specialist to work in our telephone
support function analysing systems faults and advising our customers' software personnel.

To meet the many challenges of any one of these equally rewarding positions,
you must be a mature and creative professional, aged 23-35 with a University or
College education with more than 2 years' relevant experience — ideally
gained on DEC operating systems or hardware. You'll also need a full driving

REGIONAL LOCATIONS FOR...

licence and good all round communication skills. A successful background in
either a product support or a pre-sales environment would be an advantage.
If you're one of the men or women we're looking for, you can expect excellent
rewards with Digital. In all cases, we offer attractive initial salaries together
with a full range of valuable fringe benefits — including relocation expenses,
where appropriate. And as you would expect from an expanding international
organisation, the career prospects for the determined and ambitious are
excellent.

So if you're an ambitious Software Specialist looking for more challenge, more
responsibility and better rewards, ring us NOW on one of these numbers below.
Alternatively, please write with full personal and career details to Tim Pedder at
Digital Equipment Co. Limited, Wimborne House, Basing View, Basingstoke

Licensed by the D.O.E. as an Employment Agency & Employment Business SE(B)1480

Design Engineer

Bucks £9K-£11K

We are currently seeking a professionally qualified Design Engineer to
work in a senior capacity for a prestigious communications
manufacturer. Applicants must be capable of demonstrating their
utilisation of both Analogue and Digital design techniques together
with, ideally, a background in active-filter design. Ref: 5746.

Customer Support Engineer

Home Counties up to £8,500 + Car

Our Client is an established Data Terminal manufacturer looking to
increase its field engineering resources. Customer Support Engineers
are required to maintain an existing range of terminals, VDU's and
micro-processors, faulting to component level, in an area
encompassing North and East London postal districts and surrounding
counties. Initial product familiarisation will take place at the Head
Office in the South West. It is likely that the successful applicant is
currently enjoying either a field service role or seeking a move to field
engineering from R & D, and is qualified to at least ONC level in
electronics. Ref: 5775.

Field Service Engineer

London up to £7,000 + Car

To meet the demands of steady growth, our Client - a leading
manufacturer in the field of computer peripherals - is in the process of
recruiting an experienced Field Service Engineer. Ideally candidates
will be in their mid-twenties and familiar with the faulting of data
terminals, VDU's, daisy-wheel and matrix printers to at least
board-level. Although emphasis is placed on relevant experience, a
formal qualification would be an added bonus. Ref: 5773.

For further information please contact Robert Hagarth quoting the
appropriate reference.

Sales Executives London/Southern Region c£14,000 Guaranteed

Company car On Target c£16,000+

For more than 10 years we have provided the ultimate resource in computer services.

TERRITORIES:
Include WI and City areas.

Established for more than 10 years, we are now one of the leading and most successful International Computer Services Organisations. Since our inception we have achieved consistent growth, exceeding all projections. 1982 will be no different; as part of a major European expansion we have decided to expand our highly successful sales team in the United Kingdom.

We provide and offer the ultimate resource by way of a broad range of services, recognised as industry leaders. With yet more new products to be introduced in 1982, we believe that we will not only have achieved leader status, but a level of excellence second to none.

We are seeking the following:-

- Highly successful sales executives from the computer services or software environment, with proven track record. Desirable experience would be in the areas of finance or financial modelling.
- Of particular interest are the highly lucrative territories available which are expected to yield in 1982 an extremely high income for those who are successful.

Prerequisite requirements are a good level of education, age 25/35 and resident within the London or Southern Region.

In return, we offer a remuneration package comprising a high base salary, commission and initial negotiable guarantee yielding first year earnings of not less than circa £14,000, where on target earnings would be c£16,000. A company car, full BUPA and a comprehensive training both in the UK and USA are also included, together with other very attractive incentives. For the ambitious and subsequently successful, we offer outstanding career opportunities.

For further information and immediate confidential interview, contact Chris Fry on 01 935 0671 (24 hour answering service) or 05827 2354 evenings and weekends or Paul Pearce on 021 236 3781 or 021 308 4908 evenings and weekends.

Brussels 010 322-840 7151/71 Avenue Louise 327, Boite 4, 1060 Bruxelles.
Amsterdam 010 3120-760947 Willemsparkweg 92, 1071 H.M. Amsterdam.

GRAPHICS SYSTEMS SHAPING THE FUTURE

INTERNATIONAL SALES

c.£25,000

One of the most exciting growth areas in the high technology industries is interactive real-time graphics systems. Used in CAD/CAM as well as the most demanding and intriguing areas of research these systems have had an enormous effect on industry. For more than a decade, Evans & Sutherland Computer Corporation USA has been shaping the future with high performance computer graphics tools. From CIG visual systems for commercial and military simulation to 3D Picture Systems for design and research, E&S products have set the standards.

Following several prestigious orders recently won in the United Kingdom a new addition to the European sales effort is being sought to take responsibility for Britain, Scandinavia and parts of Benelux. Based in Cambridge, the appointee will travel extensively dealing with the largest of European Industrial Blue Chips.

This high-profile position will attract executives who value their independence and wish to be in full control of their sales activities. Though a graphics background is not a prerequisite, you should have a record of success in computer or scientific sales, an empathy with technical professionals and a fascination with the latest state-of-the-art advances. In return you will receive the support necessary to deal at the highest levels, a first rate earnings package and a car of your choice. Further fringe benefits will be by negotiation.

To learn more about this unique opportunity with a company dedicated to the leadership of superior technology please contact JAMES DE BIUN on 01-938 1804. Meetings are scheduled to take place before mid-March.

SUPPORT PROGRAMMER

West Midlands based/UK travel £7.5K+ package

Our clients are a highly profitable division of a premier manufacturing organisation renowned for their excellent facilities and sophisticated approach to using current technology hardware and software.

Due to progressive systems development generated by users' demands, a requirement now exists for an additional Support individual to play a significant role in establishing and maintaining IMS routines for a range of manufacturing and commercial applications. This responsible position necessitates close liaison with users at a number of UK locations and, therefore, affords the attractive features of VARIETY and TRAVEL.

Candidates should ideally have not less than ONE YEAR'S experience with substantial IMS involvement gained in either a Cobol or PL/1 Installation. Knowledge of Assembler, JCL, CICS or TSO would be highly advantageous.

The income package is comprised of basic salary, standby allowance and bonus. Earnings are further enhanced by PAID OVERTIME. Relocation expenses will be forthcoming where appropriate.

To discuss this opportunity to further develop your career, please call Mike Wood quoting reference CW/304.

Management Information Systems Manager IBM Installation

Hampshire circa £13K
The Company

In the U.K., Europe and the U.S.A., the communications business is both booming and buoyant and there are few companies that can rival our client in the pursuit of excellence of its products in this field.

The control of manufacturing end production has necessitated the growth of an international network connecting the U.K. with Western Germany, Northern and mid-Western America.

The Appointment

Modus has been requested to recruit a person to play a key role within the company. We need a young, dynamic and ambitious person to manage the MIS department - we are not looking for a seasoned manager, but somebody of project or team leader level who would like to move up a notch or two and take on the responsibility that such a position demands. The successful candidate will plan, organise and control the overall activity of the department.

Qualifications and Prerequisites

The successful candidate will probably be a graduate between 25 and 30 years old. An IBM background is essential, as is a knowledge of either IMS, which is preferable, or CICS - DL/1, accompanied by at least three years COBOL experience. Naturally, candidates with a manufacturing background and a knowledge of production, materials handling, order processing, purchasing and factory control will be very strong contenders.

The Configuration

Linked together, giving a tremendous amount of processing power, are two Amdahl V7's, an IBM 3033 and a 3081, all running under MVS. Access is made using an RJE, on-line 3270 system, networked via Germany to the U.S.A. IMS is the main interactive database in use and TSO/SPF is used for program development.

Future Plans

At present the MIS department is quite small, about five strong, but it is planned to expand over the next five years - so an excellent opportunity is being offered for someone to come in at ground level and really expand with the company.

A distributed system is in the experimental phase and it is possible that a local 4300, using CICS - DL/1, or even a Tandem computer will be installed - so there is a great deal of technical experience to be gained, if desired.

General Information

Housing in Hampshire is both reasonable and plentiful and the company offers an excellent relocation package - an ideal opportunity to enjoy the beauty of the New Forest.

Several trips to both Germany and the U.S.A. will be necessary, periodically during the year to liaise and co-ordinate activities with the company's divisional counterparts.

This must be considered as an attractive benefit but, more importantly is the chance to consolidate a really excellent career with one of the foremost 'blue chip' companies in the electronics industry today.

CW 25

Contact David Wallard for more details and information about the company.

IBM ANALYST PROGRAMMERS CENTRAL LONDON COBOL OR PL/I TO £12,500

STRIKELITE This major international petrochemical company is currently expanding and seeks to recruit several analyst programmers to work on NEW SYSTEMS. They currently retain IBM 3033 hardware running under MVS using DATALABSE. Applicants for this superb opportunity must possess a minimum of two years' COBOL or PL/I preferably with at least 'A' level standard of education. This blue chip company can provide excellent scope for advancement and training opportunities in DATALABSE techniques.

REF.S.D.566

RPGII & III ANALYST PROGRAMMERS LONDON & H. COUNTIES SYSTEM 38 TRAINING c£13,000

Datascene have been dealing effectively with RPGII/III Analyst Programmers for nearly four years and our client has reached far and wide. We have recently taken a considerable number of vacancies in London and the Home Counties. The range of industries within the client database are wide ranging but include PETROCHEMICAL, BANKING, INSURANCE, ENGINEERING and SOFTWARE HOUSES. Ideally you should have at least 18 months' experience but preferably two years' together with a good standard of education. If you feel it's time for a change then give Datascene a call and discuss YOUR requirements with us.

REF.M.GEN.1

ANALYST/PROGRAMMER LONDON BANKING PDP 11 SERIES UP TO £13,000

Due to further expansion this banking client requires an additional analyst/programmer to complement the current team. Ideally applicants should have in excess of two years' programming in either Aims, Basic, Basic + or + 2 with two years' systems experience, preferably on PDP 11/70 equipment. General preferences include a knowledge of banking or financial/commercial applications. This position offers excellent career potential and company benefits including mortgage subsidy, season ticket loan and many others.

REF.R.511

PL1 PROGRAMMERS & ANALYSTS SURREY IBM 3033 c£10,000

A recognised LIFE ASSURANCE company, based in a pleasant country setting yet approachable from South London requires PL1 or Assembler programmers. 6 MONTHS' PROGRAMMING is the minimum requirement but those with greater experience are especially needed. ANALYSTS with similar experience are also wanted. Experience of commercial or insurance applications is useful. A knowledge of TP or database techniques would be beneficial. 4% MORTGAGES, free pension and life assurance are offered. Plus a very active sports and social club including Badminton, Squash, Rugby and Football.

REF.D.5973

IBM COBOL PROGRAMMERS CENTRAL LONDON IBM 4331 TO £12,000

Our client, an international company, are seeking to recruit programmers to join their various project teams. They retain IBM 4331 running under DOS/VSE using COBOL, CICS and DL/1. They wish to appoint career-minded individuals who will be given plenty of scope for development. Successful candidates will have a good educational background with minimum two years' COBOL. Training offered in TP and DATABASE. Excellent salary plus benefit package.

REF.S.D.5960

RPG II/III ANALYST PROGRAMMERS SURREY IBM SYSTEM 38 c£11,000

If you are currently programming in RPGII and will be for the foreseeable future then career wise you should be interested in the current System 38 RPG III vacancies currently available in Surrey. RPG III experience is useful but providing you have at least two years' RPG II experience, training will be given. Industries vary but include Pharmaceutical, Foods, Travel Companies, and Chemicals. Career progression within these companies is good and company benefits vary but are wide ranging.

REF.M.GEN.2

ICL PROGRAMMERS E. LONDON/ESSEX TO £11,500

This large company situated on the East London/Essex borders is looking to recruit several programmers to work on various commercial projects. Successful applicants will have a minimum of two years' ICL COBOL experience with either George 2, George 3 or VMEB. This organisation can offer training in database and analysis and thus plenty of scope for promotion. They operate an excellent benefit package which includes free lunch, insurance, BUPA and season ticket loan scheme.

REF.S.5985

SOFTWARE HOUSE VARIOUS MACHINES & LANGUAGES LONDON TO £13,000 + RELOCATION

Our client is currently expanding its software division and needs to recruit several analyst/programmers and consultants at its sites in City of London, Middlesex and Surrey. Successful applicants will have at least two years' experience in a business environment using either COBOL, RPG II/III or BASIC + 2. These positions offer a tremendous amount of variety in developing systems and solving business problems, user liaison and unrivalled opportunities for promotion. If you are looking for security and career development, ring for further details.

CONTRACT STAFF SERVICES

by TRIDENT Computer Services

High calibre computer staff represent a substantial investment and DP management are continually faced with the problem of maintaining the delicate balance between a realistic, economical permanent staff establishment and coping with irregular eventualities such as:

- ★ Additional manpower requirements over a limited period for development or conversion work.
- ★ Once-off specialist expertise not available in-house.
- ★ Temporary cover for indefinable peaks in workload; permanent staff sickness; vacancies in permanent staff positions.
- ★ Releasing permanent staff for other duties.

Situations of this nature are inevitable in the time critical environment of DP installations, but Trident's Contract Staff service alleviates these problems and helps users to contain DP budgets within reasonable limits by fulfilling project requirements when, and only for as long as the expertise is needed.

Trident believes in good client relationships, developed only by combining a responsive service with a truly ethical business approach, and welcomes requests for client satisfaction references.

For Project Management, Systems, Programming and Operations contract staff, with proven ability on all mainframes and a variety of mini and micro systems — CONTACT

ROUGH & SMOOTH

OPERATIONS MANAGER

c.£15,000+car

Sainsbury's are currently seeking to appoint an Operations Manager.

By nature of the role it is likely that the successful appointee will have a dual personality — preferably not of the schizophrenic variety!

On the one hand you will have the ability to manage a department of multi-disciplined Operations staff, totalling over 100 people.

The role is a demanding one — at times even rough, from departmental performance monitoring and scheduling through to budgeting and budget control.

It is essential that you will have at least five years relevant operations experience gained in a multi-hardware environment.

Knowledge of systems and programming would be advantageous.

In reaching the departmental objective which is the optimisation of over £5 million of computer equipment you will be taking on considerable responsibilities.

On the other hand...

The continuous introduction of new hardware and software will put the smooth running of your operation under pressure.

This will require you to be totally involved — even to the extent of rolling up your sleeves in a trouble-shooting role.

As a natural communicator you will be familiar with users at all levels.

Based in London, Sainsbury's current hardware configuration is diverse, complex and ever changing.

Both IBM and ICL are represented, with the ICL operation being one of the largest in the country.

The challenge of change is a key aspect of this position and if you are looking for a very real role in a stimulating and dynamic installation, Sainsbury's would like to hear from you.

In the first instance, ring the number below, or clip the coupon. By return we will send you an Application Form and Company and Person Profiles.

Please send an Application Form and Company Profile to:

COMPUTER SERVICES

SNR PROGRAMMER

COBOL £9,500

Do you have two years' solid programming experience using COBOL and COBOL? Our client, in the field of finance, needs a senior programmer to look after the design through to implementation of various new projects which are in the analysis stage. COBOL and C++ experience would be an asset, but our client would be prepared to TRAIN IN COBOL if necessary. This position provides a unique opportunity. There is also a good benefits package including flexi-time.

BASIC + ANALYSTS/SYSTEM DESIGNER c.£11,000

This forward-thinking company has opened its future requirements, and wants two systems analysts to head two new development teams. To qualify for these positions you must have at least one year's analysis experience in a commercial environment. A Systems Designer is also required with about eighteen months' design experience with a programming background.

PROGRAMMER to £11,500

This multinational company with offices in all the world capitals, are currently enhancing their software development team, and to this end they require a FORTRAN programmer with a minimum of 2 years' experience, preferably in a financial environment. The successful candidate will receive an excellent remuneration package with an extensive benefits package which includes a subsidised house purchase scheme.

PLI PROGRAMMER c.£8,000

Recruitment for this company. During the next two years the volume of business and the profit has boomed. To enable them to keep up with the demands made on their software team, they require PLI programmers with a minimum of two years' experience. They have a large communications network, and for these successful applicants who have not had the exposure to Comshare, full training will be given. There is a full range of fringe benefits including S.T.L. and a subsidised restaurant.

FORTTRAN PROGRAMMER to £12,000

Are you a commercial FORTRAN programmer? Our clients, a financial organisation, require your expertise. You should have at least two years' FORTRAN on commercial applications, preferably with an Assembler language, although this is not essential. This is an outstanding opportunity to move into a progressive environment, where hard work is rewarded with promotion into analysis and management. The company offer good benefits coupled to an excellent training policy.

PROGRAMMER c.£7,500

Do you know BASIC? If you have a minimum of one year's solid commercial programming experience using BASIC, then this international company is for you. The hardware comprises two mid-range PDP 11s using RSTS/E. Applications are varied and they require a person who can handle all spheres of commercial applications. The company is offering an excellent salary, good promotion prospects and a very stimulating and progressive environment.

PLI PROGRAMMER c.£8,000

Recruitment for this company. During the next two years the volume of business and the profit has boomed. To enable them to keep up with the demands made on their software team, they require PLI programmers with a minimum of two years' experience. They have a large communications network, and for these successful applicants who have not had the exposure to Comshare, full training will be given. There is a full range of fringe benefits including S.T.L. and a subsidised restaurant.

Process Control Analyst

LOOKING FOR A CAREER STEP IN
ADVANCED TECHNOLOGY?

COME TO DESIDE FOR UP TO £10.3K

We are a recently formed organisation (an Anglo-American partnership) manufacturing and developing optical wave guides for telecommunications standards. We are now looking for an experienced and enthusiastic man or woman to join our computer team.

You will have 3-4 years experience in writing software in a process control environment on DEC PDP 11, using RSX 11M, a high level language and ASSEMBLER. A knowledge of system generation using RSX 11M is essential and continuing.

You will assist in the commissioning, development and maintenance of an Hierarchical Distributed Process Control System, using 1/44's, /34's and LSI 11/23's. Initially you will gain hands-on experience in the USA before returning for the implementation of the process in Deside.

Our benefits package reflects our progressive company philosophy and includes 25 days annual holiday and generous assistance with relocation expenses in appropriate cases. We are located on the Chwyd/Cheshire Border within easy reach of the beautiful North Wales Coast and countryside, the ancient city of Chester and the big city amenities of Manchester and Liverpool. Attractive property is readily available at reasonable prices and nationwide communications are excellent.

Interested? then write with comprehensive personnel and career details to

Chris Alsworth,
Project Personnel Officer, Optical Fibres,
Second Avenue, Deside Industrial Park,
Deside, Chwyd CH5 2NX.

SYSTEMS ANALYST

TELEVISION COMPUTER SERVICES

We are looking for a Systems Analyst on a two year contract, salary ranging from £9,895 - £12,563 who will be responsible for the design and implementation of computer systems for Television users in Accounting applications.

We require at least two years' successful experience in analysis, design and implementation of computer systems.

The projects involve liaison with a wide range of user departments and analysts must be capable of effective communication and negotiation. They should show strong self motivation, flexibility and a thorough knowledge of and proficiency in computer processing techniques.

We require experience preferably of on-line systems design and implementation, preferably with ICL mainframe (1900 and 2900), and experience of costing systems.

Based West London. There are facilities for interest free ticket loans and this post will attract full holiday entitlement.

For further information contact Janet Holt on 01-743 8100 ext. 3693.

Please write or telephone for an application form direct to BBC Appointments, London W1A 1AA. (quote ref. 211/CW and enclose s.n.e.) Tel: 01-580 3334.

COMPUTER PROGRAMMER

REDDITCH

The installation of an IBM System 38 has formed an integral part of the development of Serck Services and currently we have an opening for another Programmer to join our already strong computer centre team.

To be successful you will be aged 20-35, with at least two years' experience of programming in RPG II, you will be familiar with IBM GDS, hardware and ideally financial and/or stock control systems.

Your reward package will include a high basic salary, company pension, and insurance and every opportunity to develop your career into systems analysis.

INTERESTED?

Write to David Green, Personnel Officer, Serck Services Ltd, Claybrook Drive, Wetherford Industrial Estate, Redditch, Worcester. B98 0D2 with details of your experience and salary requirements.

TWO MARKETING EXECUTIVES

IDS is an established, successful and growing company specialising in high quality software products for IBM System/34 and System/38. INSIGHT, our market leading financial information system is to be joined by yet another product with equal potential.

We need two marketing executives to join our progressive team.

Your earnings packages will give you a very good basic salary plus a company car whilst our incentive scheme will give you a high salary in return for good results.

I would like to meet you only if you can earn £15,000 or more.

Please call David Hurst on 01-242 6837.

(17082)

COMPUTER MANAGER

Salary £9,150-£10,152 Grade P01(1-5)

Applications are invited from persons with a sound technical background for this new post in the Treasurer's Department.

The Council is in the process of replacing its ICL 7503 terminal link and replacing it with an ICL ME29/37 machine. Some links with the Berkshire County Council's ICL 2878 main computer will remain, but independent development, together with local terminals and cash receipting terminals, is envisaged.

The successful applicant will preferably have experience of ICL equipment and systems, and possess the necessary managerial ability of commissioning the new ME29 and develop computing services within the Authority.

Bracknell is a modern town with good amenities, situated in a rural area of East Berkshire, within easy reach of London and the M4.

Housing may be provided in appropriate cases.

Benefits will include flexible working hours, a subsidised staff restaurant, sports and social facilities and the chance to join BUPA at a generous discount.

For further details and an application form, please ring Bracknell 59985 (24 hour answering service) and leave your name, address, job title and where you saw this advertisement. Forms must be returned by 5 March 1982.

FIELD ENGINEERS COMPUTER SYSTEMS

Datapoint (U.K.) Ltd. is one of the leading suppliers of business computer systems, local networks and data automation products with over 2,000 installations throughout the country and an impressive growth and profitability over the last five years.

We are now entering another major phase in the development of our Field Service force and require a number of Field Engineers in the following areas: Greater London, Middlesex, Bucks, Bucks, Surrey, Kent, Essex, Suffolk, Hants, Birmingham, Warwick, Oldham, Swindon.

Ideally applicants will have experience on main frame, minicomputer or the associated peripherals but candidates with suitable technical qualifications will also be considered.

A highly competitive package is offered, company estate car and all the usual large company benefits.

Please write or phone for an application form to:

The Personnel Officer,

DATAPOINT

DATAPOINT (U.K.) LTD. WINTER HOUSE, 400 NORTH CIRCULAR ROAD, NEASDEN, LONDON NW10 0JG. TEL: 01-459 1222, 1223, 02123.

SYSTEMS ANALYST/ PROGRAMMER

o.£9000

To meet the challenge of continuing company growth, W. Thornton Ltd., manufacturers and retailers of high quality confectionery, require an experienced Systems Analyst.

You'll join a small team currently engaged in the production of systems on Hewlett Packard 3000 hardware. The work will involve the design, specification and testing of software systems and the implementation with users.

You should have at least 3 years' experience as a Systems Analyst together with the ability to communicate effectively. Additionally you'll need to be flexible and self-motivating as the post will at times involve working on your own initiative.

The salary and fringe benefits are attractive, including relocation expenses, and the job offers a genuine opportunity to make a significant contribution to the future development of the company's computerised systems.

For an application form please write or telephone the Personnel Services Manager, J. W. Thornton Ltd., Derwent Street, Belper, Derby, DE5 1WP. Tel. Belper 4181.

D.P. RECRUITMENT CONSULTANT

We are seeking an ambitious and self-motivated professional with a professional approach to DP recruitment activities. You will display either a successful track record within recruitment consultancy, or a sound DP background, ideally in a customer support role. In return, we can offer higher personal rewards based on achievement, coupled with greater scope and responsibility.

D.P. CONSULTANTS

LONDON to £17,000+
To join a well-established management consultancy organisation and to advise clients in a wide variety of industries and applications. Applications will probably be in the mid-thirties, having established careers, within Systems/DP Management, and are seeking to broaden their horizon in the consultancy role. Experience of banking, insurance or other financial applications would be of particular advantage.

To MANAGING CONSULTANT Level

to £20,000+
This major organisation is looking for development personnel up to Managing Consultant, to advise and assist their clients within the U.K. and abroad. Applications must have a solid DP experience at the appropriate level, including a knowledge of COBOL or PL1 with CICS, and must be able to work on their own initiative. Excellent prospects for promotion. Similar requirements exist with a number of other clients who need DEC, PRIME and ICL expertise.

ANALYSTS TO PROJECT LEADER Level

to £15,000 + package
Our client is an international Organisation with a large investment in the development of on-line systems and are seeking development staff at all levels. The successful applicants will have a minimum of 3 years' programming experience preferably in COBOL, FORTRAN or ASSEMBLER, together with a proven track record in systems development. There is ample opportunity for career progression in a dynamic environment. The package includes relocation expenses, where applicable.

RPG 2/3 PROGRAMMERS to SYSTEMS CONSULTANTS

to £15,000
A number of our clients situated in London/Home Counties, South East England and Midlands are seeking Programmers and Analysts with 2-3 years' RPG experience, preferably on System/34 and/or System/38 equipment, capable of working on their own initiative. Applications include the specification, design and implementation of a wide variety of commercial systems, and for at least two sites this includes the added attraction of a COMPANY CAR, together with occasional trips abroad.

SENIOR SYSTEMS ANALYSTS

LONDON to £14,500+
This international Company is expanding its information service, and requires someone with strong financial systems experience, coupled with a working knowledge of TOTAL database design. The successful applicant is also likely to have mini/micro experience and a sound background in IBM programming.

SYSTEMS PROGRAMMERS

to £14,000+
A number of companies in London and the Home Counties need Systems or Support Programmers with up to 4 years' ASSEMBLER and/or COBOL, PL1, APL, with CICS/DBL experience to perform important roles in design and software development, in DOS/VSE, OS/VS1 or MVS DB environments. Opportunities exist to enhance your skills, by keeping abreast of technological changes.

SENIOR SYSTEMS ANALYST

LONDON to £13,000 + profit share
This large company needs someone with at least 3 years' systems experience, to work on the design and implementation of real-time financial applications. Experience of database concepts are essential for this position.

SYSTEMS ANALYSTS

LONDON/HANTS/HERTS/KENT to £13,000
Applicants with at least 2 years' systems experience are urgently needed by several large companies specialising in the financial field. Knowledge of Banking, Insurance or other financial applications is advantageous, as is experience of IBM or DEC equipment. Attractive benefits accompany the salaries being offered.

SENIOR ANALYST (IBMS)

to £12,500 + benefits
Major North London Company, undergoing substantial development programme, is seeking a key person, preferably with IBMS experience to work on Personal and related applications in an MVS environment. Benefits include bonus and relocation expenses. IBM experience is required for a similar position with another London-based company involved in the engineering and construction business.

SENIOR ICL PROGRAMMERS U.K. AND ABROAD

to £12,000 + allowances
Major Software House has an ongoing requirement for Programmers with at least 3 years' COBOL experience to work on various client projects. The successful applicants must have a good understanding of ICL software, preferably with VME/B and IBM. Generous overseas allowances given.

SYSTEMS PROGRAMMERS to TEAM LEADER Level

BERKS to £12,000
A market leader in the application of advanced microprocessor technology needs computer professionals to work on projects involving the application of state of the art 8 & 16 bit microprocessors for dedicated engineering applications. Candidates must have a minimum of 2 years' systems software programming experience using ASSEMBLER, FORTRAN, PASCAL, or ALGOL.

COBOL PROGRAMMERS

LONDON/HERTS/MIDDX/SUSSEX to £12,000
A number of predominantly financial organisations require Programmers with 1-3 years' experience, preferably in a DOS/VSE environment with CICS and DL1, a distinct advantage. The chance to work on a wide variety of interesting development projects is coupled with good financial rewards and attractive perks.

BUSINESS ANALYSTS

MIDDX/LONDON to £11,000 + car
Good financial background, plus confidence and personality is needed for these interesting positions, involving project negotiation, systems design and specification in a user-oriented environment. Some travel may be involved.

ANALYST/PROGRAMMERS

MIDDX/LONDON to £11,000 + bonus
This leading Software House requires Analyst/Programmers for the development of a wide variety of interactive real-time systems. Applicants must be capable of working on their own initiative and have a sound programming background. A knowledge of DATA GENERAL equipment would be an advantage.

FORTRAN SPECIALISTS

LONDON/HOME COUNTIES to £11,000
Programmers and Analysts are required to join existing development teams to work on a variety of applications including scientific, engineering and commercial projects. An IBM, DEC or GA background would be a plus, but is not essential. Excellent fringe benefits.

DATA PROCESSING MANAGER

to £11,000
This rapidly expanding organisation is seeking a D.P. Manager to take responsibility for the running of their System/34 installation. This position would ideally suit an Analyst/Programmer with RPG2/3 together with System/34 or 38 experience, capable of taking on this new role.

PL1 PROGRAMMERS

LONDON/HOME COUNTIES to £11,000 + benefits
A minimum of 2 years' PL1 experience is required for development of on-line applications, and a working knowledge of CICS and DL1 would be an advantage. Several of our clients also seeking Junior Programmers with at least 6 months PL1 experience, with prospects of moving into analysis.

The above vacancies are only a token selection of our current vacancies, and we have many more opportunities for professionals wishing to further their career objectives. (0852)

SYSTEMS INSTRUCTOR

LONDON to £11,000
This organisation, highly skilled in the training of all levels of development personnel, is seeking a talented Analyst to impart the knowledge, techniques and disciplines of systems analysis.

BASIC(PLUS) & ASSEMBLER PROGRAMMERS

TO £10,500 + BENEFITS
We have a number of vacancies in London/Home Counties for Programmers with up to 18 months' BASIC + AIMS or ASSEMBLER experience, with the opportunity to work on a wide variety of commercial and scientific systems. Excellent opportunities for career progression, plus attractive fringe benefits, including low interest mortgage facility, bonus schemes and low cost travel.

PROGRAMMER/ANALYST

LONDON to £10K + profit share + bonus
This Software House requires a dynamic person with imaginative analysis skills and two years' IBM COBOL, to play a leading role in the development of interactive systems on IBM 4300 equipment.

ANALYST/PROGRAMMERS

ESSEX to £10,000 +
Our client is looking for DP professionals with at least 12 months' commercial Systems Analysts together with a working knowledge of COBOL. As the installation is converted from ICL to IBM 4300 equipment, this is an ideal opportunity to gain experience on new equipment. Excellent fringe benefits.

PROGRAMMERS AND ANALYSTS

SUSSEX to £10,000
Expanding manufacturing company is looking for Programmers and Analysts with a minimum of 2 years' experience in a low level language. Successful applicants will be trained on IBM hardware and equipment manufactured by the company. Excellent prospects.

PROGRAMMERS

LONDON/ESSEX to £10,000
This company needs programmers with 2 years' experience of IBM COBOL, to cope with their expansion plans. An ideal opportunity exists to progress to Analysts on medium and large systems.

ANALYST/PROGRAMMER

LONDON/ESSEX border to £9,000 + leased car + BUPA
An Analyst/Programmer with COBOL experience is required to join expanding DP team in high cost durable distribution business. UNIVAC experience, plus the ability to work with non-DP staffs are distinctly advantageous.

PROGRAMMERS & ANALYSTS

SUSSEX/KENT to £9,500-£12,000
Expanding electronics company need Programmers and Analysts to develop a variety of commercial or scientific systems. Applicants must have a Degree, together with a minimum of 2 years' programming experience using IBM or DEC equipment. Opportunities also exist for Programmers to be trained in Analysis.

ANALYST/PROGRAMMERS

SUSSEX/KENT to £9,000-£11,000 + mortgage
Several major insurance organisations are seeking computer professionals with at least 18 months' COBOL experience to work within their development teams using database software on IBM 370/4300 and UNIVAC 1100 equipment. Opportunities exist to gain in-depth knowledge of database techniques and skills associated with networks.

ANALYST/PROGRAMMERS

HERTS/LONDON to £9,000-£11,000
Several companies involved in Banking, Insurance, and other commercial applications require staff with at least 12 months' analysis experience and a sound COBOL or BASIC+ programming background. Experience of DEC, BURROUGHS, or IBM equipment are essential for these positions.

H.P. ANALYST/PROGRAMMERS

to £8,000-£11,000
Several well known companies, situated in Middlesex, Beds, Herts and the City, have urgent requirements for Analyst/Programmers who have had exposure to HEWLETT PACKARD 3000 equipment and software. Experience of distributed database systems would be an advantage, but not essential.

ANALYSTS & PROGRAMMERS

to £7,000-£10,000 + benefits
We have been advised by a number of ICL 1800/2800 Clients in Central London, Home and Southern Counties of vacancies for Analysts and COBOL Programmers with 1-3 years' experience to join their development teams. Some online experience would be useful, plus a good understanding of ICL systems software. Benefits include PPF, and subsidised mortgage, productivity bonus, long-hours.

JUNIOR PROGRAMMERS & ANALYSTS

to £6,000-£9,000
A number of clients situated in London and Home Counties have vacancies for Junior Programmers and Analysts with up to 12 months' COBOL experience, to assist in the development of a variety of applications, including banking, manufacturing, etc. Benefits include Mortgage and Subsidised Restaurant and Season Ticket Loan.

JUNIOR (TRAINEE) BUSINESS ANALYST

MIDOX to £5,000-£7,000
This position would ideally suit someone wishing to move into pure Business Analysis. The successful candidate will possess good communication skills, preferably with a measure of commercial experience and theoretical systems knowledge.

SHIFT LEADER

HANTS to £8,000 + benefits
This large company requires a Shift Leader to take responsibility for one of their three shifts. Supervisory experience and a working knowledge of BURROUGHS 6800 are essential for this position. Benefits include mortgage subsidy and N.C. Pension.

COMPUTER OPERATORS

ESSEX/MIDOX/LONDON to £7,300+
Two financial organisations require operators with at least 18 months' DOS/VSE, DB or MVS experience, to work 2 and 3 shifts plus occasional overtime. Benefits include mortgage subsidy for London vacancy. Good prospects.

COMPUTER OPERATOR

ESSEX to £6,500
This company needs an Operator with 12 months' experience on 2804/2860 operating in a 2 shift environment under EXEC 89/DME. Applicants must reside within commutable distance to Harlow.

TO 15K

This is a new, key appointment with an international manufacturer based in London, with responsibilities throughout Europe.

Candidates should have worked in an S.L.D.C. environment and MUST have specific experience of:

- Software distribution and literature control.
- Establishing software release strategy.
- The management of software distribution in a manufacturing environment.
- Ensuring software vendor obligations.
- The pre-release and controlled release of software.
- The management of release schedules.

The remuneration package for this challenging and demanding role is excellent, comprising a salary c.£13-£15K, plus a company car and the usual big company benefits together with significant career progression prospects.

COMPUTING SERVICES

Computer Applications Engineer

Mott, Hay and Anderson are international consulting engineers with a very wide practice in civil and associated mechanical and electrical engineering.

We require an Engineer with experience of structural analysis, including the finite element method and of Fortran Programming to join our Computing Services Group. The group provides a wide range of computing services for the company and to outside clients.

The successful candidate, although specialising in structural analysis, would work closely with other members of the group. The firm's computing facilities include a DEC VAX 11/780 computer, computer aided draughting and word processing systems.

There could also be opportunities to take part in a design team for major engineering projects, and for travel abroad.

Please reply in writing giving brief details, quoting reference No. 213, to:

Associate for Personnel, Mott, Hay and Anderson Holdings Ltd., 20/26 Watlington Road, Craydon, CR8 2UL.

(8830)

Mott, Hay & Anderson

International Consulting Engineers

TAMESIDE METROPOLITAN BOROUGH COMPUTER DEPARTMENT

An ICL 2866 Computer has recently been installed running under DME/GEORGE 3, shortly to be replaced by an ICL 2886 under CME. The Authority has an extensive computer development plan.

To implement this and assist in conversion to VME we require:

(A) 2 SYSTEMS ANALYST/PROGRAMMERS

(New Posts) £8991-£9993 p.a.

At least 3 years' COBOL programming and, one year's experience in Systems Analysis.

(B) 1 SENIOR PROGRAMMER

£7371-£8628 p.a. according to experience.

At least three years' COBOL programming.

Candidates must also have extensive experience of either GEORGE 3 or VME operating systems.

Application forms and further details from Chief Personnel Officer, Council Offices, Watlington Road, Ashton-under-Lyne, Greater Manchester OL5 6DL to be returned by the 16th March, 1982.

(8808)

Assistant Computer Operations Manager

£10,000

If you've time to read this,
it's time you moved

These days, very few companies really need your skills. Their business position is weakened and they foolishly look at data processing activities as an unnecessary evil. Hence, there's little for you to be in control of, except your dissatisfaction.

Meanwhile, at Dixons, where millions of people purchase all manner of photographic, hi-fi and leisure goods from our 950 stores, there is a totally different, inspired attitude. Ruthless efficiency has greatly contributed to our success, and it will make us even more successful yet. And at Dixons, efficiency does mean, and will continue to mean, developing the most sophisticated computer systems possible.

You can see therefore why we need a man or woman for this new management position who is adept at ensuring work flows through the various areas of the department, accurately, punctually and efficiently. We would be looking for you to have ICL 2900 experience with VME/B, and proven management ability. In terms of career development potential, we can provide what others cannot. Other benefits we can provide are also worthwhile.

To apply, please telephone Norma Rolph on Stevenage (0438) 4371 for an application form.

Dixons
Camera House, Cartwright Road,
Stevenage, Herts.

HOLLAND

IBM ANALYST-PROGRAMMERS AND PROGRAMMERS

ADVANCED IBM INSTALLATION
The organisation utilises large IBM hardware and an on-line database system is operational. In addition, a network with distributed databases at its offices in North and South America and Europe is being set up. COBOL is the main programming language.

WORKING ENVIRONMENT
The development team comprises a number of experienced analyst programmers who work individually on projects or combine into small project teams as the need arises. A high proportion of the staff is British and English is the working language of the installation.

EXPERIENCE REQUIRED
For the analyst programmer vacancies, highly experienced candidates with at least five years' varied commercial work utilising COBOL on large IBM hardware are needed. Some database and TP experience is desirable. For the programmer vacancies, three years' experience of COBOL on large IBM hardware and software with exposure to DB and TP are desirable. For both positions training will be given to fill any technical gaps.

SALARY & BENEFITS
There is considerable flexibility in what can be offered and in addition to the basic salary, a vacation allowance, annual bonus and tax-free travel allowance are paid. The total package will range from perhaps £11,000 at the more junior level to £17,000 for a suitable senior person and will ensure a substantially higher standard of living for selected candidates. Medical insurance is paid by the Company.

RELOCATION
A generous relocation package is offered to help candidates and their families settle in satisfactorily.

LIVING IN HOLLAND
Many British computer staff work in Holland and it is in many ways the "softest landing" for those who wish to move to continental Europe. The client is located in a small town near the coast and accommodation in the area is not difficult to find and the cost of living in general is now lower than in the UK, due to Holland's lower rate of inflation.

LANGUAGE
English, as well as being the working language of the installation, is generally spoken throughout Holland, which considerably eases settling in problems.

INTERVIEWS
Initial interviews with the client's representatives will be held at our offices in Nantwich on 4th March and in London on 5th March.

For an initial discussion, ring me, Neville John, on (0270) 627206 Office Hours or on (0270) 213118 Other Times, or write to me at the address opposite, quoting Ref 207/CW.

Specialists since 1971 in UK and International computer & technical appointments.

OCC Computer Personnel
5 Hospital Street
NANTWICH Cheshire
(0270) 627 206

Computer Professionals for the U.S.A. \$20,000-40,000

TEXAS-DALLAS, HOUSTON

Programmers and Analysts for two of the fastest growing areas in the U.S.

Opportunities to work with latest hardware and software - for major industrial and energy corporations, banks and insurance organisations.

Added advantage of living in the sun-belt, where inflation is low, and standard of living high.

EAST COAST-NEW YORK, NEW JERSEY

Our clients are large corporations in the financial, petrochemical and consumer industries; primarily IBM users with IMS, CICS etc.

We have developed in-house training for non IBM staff and are currently presenting an in-house IMS course.

Our staff live in Manhattan (Big Apple) or slower paced New Jersey. We'll help you choose which location is best for you.

All positions require degree and at least three years' experience in the following areas - IBM, COBOL, ASSEMBLER, PL1, IMS, CICS, also opportunities for those with LCL and Mini experience.

Benefits include relocation to the U.S., full medical coverage, paid overtime and annual round trip airfare to U.K.

People with marginally less experience may be granted the opportunity of additional training in the UK prior to being moved over to the States office.

Representatives from our New York and Dallas Offices will be over commencing 8th March, 1982, to discuss your career prospects.

Computer Personnel International

THE SPECIALIST RECRUITMENT SERVICE DIVISION OF COMPUTER SYSTEMS INTERNATIONAL

30-32 SOUTHAMPTON STREET, LONDON WC2. 01-836 6775

Come and Chat up Real Time Mini!

(it's worth £7,500 to £18,000)

The second nicest thing about us at Real Time Mini's place - we're told - is our easy understanding of Real Time Mini and/or Micro people.

We specialise in the same field, see, and we can chat back at you at your level because we know what we're talking about. With no less than three years' Real Time experience in the following fields you are particularly welcome to chat us up.

Communications (all manner of) - Industrial Control & Instrumentation - Military Systems - Simulation - Satellite Systems - Image Processing - C.A.D. Graphics - Office Automation - etc., and Commercial Systems.

Languages? The lot - ASSEMBLER, CORAL, FORTRAN, PASCAL, RTL/2, BASIC, 'C' language or anything down the high or low level list.

Hardware? DEC, Hewlett Packard, Ferranti, Data General, Prime, Intel, Zilog, Motorola, Tandem, etc., together with relevant operating systems (incidentally, we'll roll out the red carpet if you've got UNIX experience).

Opportunities from Programmer/Software Engineer to Consultants/Managers. We also have plaintive pleas for Hardware Engineers with experience of digital design, about three to five years would be just right.

Clients seeking the aforementioned are users, manufacturers, and software houses, in London, the Home Counties and further. Some offering U.K. and overseas travel, some offering cars and other attractive benefits - AND - if you have good experience of digital exchange systems and speak German, Switzerland is waiting for you.

So take your pick and chat us up. Dial 01-836 9719 or 01-836 9882 - whatever time of day or night or weekend it is - and ask for Beryl McLaren. You'll get a personal answer, not a machine.

Commercial Systems Analyst/Programmer

Progressive Environment
West Country £8/9,000

Independent Chemists Marketing is responsible for the development and maintenance of a wide range of services for UK retail and wholesale chemists including advanced computer systems. We now need to expand our team based in Warrminster by appointing an Analyst/Programmer who will have the opportunity of working on a number of challenging projects including point-of-sale and microcomputer applications.

The successful applicant will have general systems experience and knowledge of COBOL, and will be prepared to undertake responsibility for all aspects of a project.

Age and specific machine experience are less important than ability and commitment. An attractive salary is offered, together with relocation assistance where necessary, and other benefits.

Please write, giving brief details of experience and qualifications to:

The Company Secretary
Independent Chemists Marketing Ltd
11 Boreham Road
Warrminster
Wiltshire BA12 9JU

SALES BIT

How to become a head-hunter—2

Recruiters who exploit human weaknesses

LAST week I wrote about my reactions to the role of the "head-hunter" — the type of recruiter who makes his living by approaching individuals directly in accordance with a character/experience/company profile rather than advertising or resorting to a normal agency operation.

Ironically, this method of recruitment is often more financially rewarding and easier than the more socially acceptable advertising and/or agency-based operation.

I also believe it to be corrupt and demeaning because it exploits the weakness of human nature. Who can resist the ego boost of a letter or telephone call which suggests you have been "identified" as an (or even the) individual with the special talents for an important challenging and highly rewarded job? It confirms a tenuous personal belief (or is it hope?) that one has great potential yet to be unleashed and now someone has had the wit to discover and acknowledge it!

It is a glimpse of the greener fields and jam tomorrow and only a fool, it appears, would say "No thank you, I'm not interested."

The more senior the "target" recruit, the easier the task of identification. It's a function of the logistics of the company pyramid — the higher you go, the fewer of a given job function there are around.

Identifying lesser victims such as salesmen is more time-consuming for the head-hunter, because individual names do not immediately spring to mind, and discovering them is relatively laborious, but a task that creates few intellectual demands.

There are two basic strategies: The "roll-over" recruiter simply interrogates his candidate files in the context of the appropriate geographic location, product knowledge, application experience, etc. makes a list of names and telephone numbers, then it's into the "Hello Fred, a really special job opportunity has just cropped up that I simply had to call you about."

The head-hunter, with no permanent personnel files or the "roll-over" recruiter with no appropriate candidates has a bigger problem, but not an insurmountable one. He simply identifies his client's principal competitors, contacts the appropriate branch office and chats up the telephone operator.

"Who's your salesman for North London?" or "I'm trying to re-establish contact with one of your salesmen, but I've forgotten his name!" and other colloquial gems usually generate a crop of names.

Then it's simply a matter of "Good morning Mr. Salesman, you have been identified by a substantial and progressive organisation as a strong contender for an excellent career opportunity that has just arisen in your area."

Unfortunately, the computer industry has been dramatically short of accomplished salespeople from its very beginning and the situation is no better today — probably worse. This imbalance of demand over supply is the ideal scenario for the head-hunter and clearly attracts the kind of person who enjoys this sort of challenge.

It's a process that I find unacceptable, except, perhaps, in very special circumstances that may exist at high executive level, ie people who ought to have sufficient experience to handle a direct approach. At the territory sales level I consider it unprofessional practice that should be treated by individuals with the contempt it deserves.

Having said all that, just consider the implications of direct approach recruitment from the employer's point of view purely in terms of its basic benefits and disadvantages. In its favour it has the apparent benefits of avoiding the vagaries of Press advertising and is directed at individuals with directly relevant experience to the job vacancy.

The corresponding disadvantage is that the scope of search is limited to the head-hunter's sphere of industry knowledge and individual contact, which is unlikely to be absolute.

Secondly, a job which is not advertised automatically excludes candidates outside the head-hunter's influence and, more importantly, those up-and-coming people who are not currently in the given job function, but have the qualifications to carry out the job, and see it as a bigger opportunity and challenge than someone already operating in the same capacity.

Another problem can be credibility. Do you really want to work for a company that is prepared to rip you out of your current employment in order to secure an easy route to solving what is usually a self-inflicted management problem?

There is already too much voluntary traffic in personnel within the computer industry (although the recession has undoubtedly slowed down a lot) without stimulating additional movement to meet the short-term objectives of employers and head-hunters.

I cannot see any benefit in the long term to any party in the head-hunting syndrome other than the head-hunter himself.

So I hope you will perceive a considerable difference between a head-hunter and a recruitment consultant and understand why the latter may react negatively to being given the wrong lead.

I also hope you now have a better appreciation of the head-hunter's methods and motivation and will have the strength to say "not today, thank you" the next time he calls — even if you secretly hope he will.

Alan Williams

You'll never get new PDP11/60 systems at this price from Digital again!

Our ex-stock systems include PDP11/60 processor, dual cabinet, 256 Kbytes MOS memory plus 2Kb cache memory.

Hardware floating point processor (FP11-EB).

RSX11M V3.2 operating system & Fortran 77 language compiler (unsupported).

Full Digital installation, 90 day on site Digital warranty and delivery.

LA120 console terminal and choice of disks/tape.

The PDP11/60 was introduced by Digital as a very fast processing system for scientific and technical "number crunching" applications. It is still one of the fastest PDP11 family computers available. Benchmark tests, including Whetstone, show that the PDP11/60 has processor performance characteristics equivalent to 85% of a similar configured PDP11/70 system in heavy floating point calculations and approximately 80% in an average mix of fixed and floating point.

For further information telephone Mike Molloy/Bill Sellers on 0734 594220.

NOWAK DATENTRAGER GMBH

Anything you need for your Disk Drive - we can help. We are your specialist all over the world.

Our Range:

- Magnetic disk drives DRI, Diablo, Ampex, CDC - Sales and Service.
- Magnetic heads for all disk drives, new, refurbished or exchanged. We are keeping in stock 8,000 brand new heads and 8,000 refurbished.
- Magnetic tape heads, new, reconditioned or exchanged.
- Air filters for magnetic disk drives of all manufacturers.
- High-speed disk controllers for DG Nova and Eclipse.
- Shock watches, CE-cartridges and fix platen.
